ANNOUNCEMENT.

IN

COMPILING OUR CATALOGUE FOR 1890-91, we have embodied therein a complete and comprehensive description of all our Radiators up to date of issue, interspersing, now and then, data pertinent to the subject of heating which we believe will prove of interest and value to any one who may read same.

Improvements and New Designs.

We have made improvements in some of our Radiators, and brought out many new designs and now feel, more than ever before, that we make the largest and best assortment of Steam and Hot Water Radiators to be found anywhere. Our variety comprises over seven thousand different styles and sizes and of any one size, say 36 square feet of Heating Surface, we make over 300 different styles. Please to bear in mind that we manufacture nothing but Radiators and their immediate appurtenances, and so aim, and believe we have a right to claim that

We make everything in Steam and Hot Water Radiators.

Our extensive variety comprises a full line of Radiators having a Base and Top, Base and no top, Top and no Base, no Base nor Top, plain or nickel plated Top, Marble Top, Radiators with Arabesque (*Moorish*) Design, Renaissance Design, or plain, as the exigencies of the case may demand.

Quality, High and Low Grade.

By the use of a special mixture of iron we are able to produce goods of the highest possible grade, close grain and strong, homogeneous and highly effective. In all fair and impartial tests of Radiators the Bundy has shown a superiority of from 10 to 60 per cent., and in 200 such tests by Mr. Chas. E. Emery, M. E., the Bundy Radiator showed an average superiority of 19.17 per cent. as reported by him. Our Hot Blast Furnaces are a special pattern designed by us and used exclusively in our business. Our goods have a larger percentage of carbon than any other, and while this adds to their cost of production, it makes them practically non-rustable and more effective as Radiators of heat.

Over Twenty-five Million Square Feet of Bundy Radiators now in Use.

The universal adoption of the Bundy Radiator during the past ten years, or since its introduction attests more strongly than can anything else to its great superiority. During this time over 25,000 of the largest and best buildings in the world have been equipped with them, and we are continually receiving letters from users of our goods stating that they have never given them the slightest trouble or cost one cent for repairs. Other Radiators may appear cheaper for the reason that they cost a trifle less at first, but subsequent cost of repairs to correct defects soon more than make up this difference. An inferior Radiator may do fairly well when new, but the test comes after years of service. The Bundy Radiator has been in use for a long term of years and has never once failed to give satisfaction when set to place by a practical man.

Less Fuel is Required Where the Bundy Radiator is Used.

This one item alone represents a saving to the user that pays a larger percentage on the investment than can be found any where, not taking into account the many other advantages also secured, long life of apparatus, noiseless operation, uniform, pleasant and healthful, no repairs or trouble of any description.

Jersey City has Better Shipping Facilities than any other point in the Country.

Not even the great metropolis is so favorably located as Jersey City in point of shipping facilities. Its water frontage on the Hudson River and New York Bay, gives ready communication with every seaport of the commercial world. With all principal railroads terminating within its borders, it is linked with every city in the country. The result is that lower rates of freight and more prompt deliveries are secured from this point, than from any other in the United States.

Large Stock, Prompt Shipment and Satisfaction Guaranteed.

Large quantities of regular goods we keep constantly in stock and can meet any demands promptly that may be made on us. We aim to please our customers in every conceivable way, for as we only manufacture Radiators and their immediate appliances we must satisfy a customer or lose his trade altogether.

We thank our many customers and friends for their liberal use of our goods in the past, and shall endeavor, by keeping up our present high standard of production and giving careful attention to all orders to merit a continuance of their esteemed trade and patronage.

A. A. GRIFFING IRON CO.,
Jersey City, New York, Chicago, Philadelphia.

SPECIAL NOTICE.

IN ORDER TO SAVE CONSIDERABLE CORRESPONDENCE REGARDING RESPONSIBILITY OF SHIPPER,
 CARRIER AND CONSIGNEE FOR LOSS OF AND DAMAGE TO GOODS, ETC., WE WOULD
 CALL THE ATTENTION OF OUR CUSTOMERS TO THE FOLLOWING:

S SOON as goods are delivered in good order and condition in Jersey City or New York, and a receipt taken for same, our responsibility ceases. Should the Transportation Company insist on our signing a release or other document in reference to their liability, we must comply; this will not, however, in any way affect the right of the consignee (who is the real owner) to recover damages for any carelessness or negligence on the part of the carrier. It should be distinctly understood that we, as shippers, have no legal claim on the goods after they are delivered to the Transportation Company properly consigned, as the ownership has passed from us to the consignee. We will, however, endeavor to assist customers in getting claims adjusted.

We make a great variety of Radiators, and many different sizes, and have a great many customers. Hence it is absolutely impossible to remember what kind of Radiator, size, and style of tapping each particular customer may use.

To avoid mistakes in ordering, we would respectfully request our patrons to specify figure and size in our book. All Regular Steam Radiators are tapped $1" \times \frac{3}{4}"$ Right Hand, unless otherwise specified.

All Regular Hot Water Radiators are tapped $1\frac{1}{4}" \times 1\frac{1}{4}"$ Right Hand, unless otherwise specified.

All measurements in this book are as accurately given as it is possible to get them, but as foundry castings vary in size, even when taken from the same pattern, a fact which all practical men, especially foundrymen understand and appreciate, we wish to state, that we do not hold ourselves liable for damages when the dimensions of the goods vary somewhat from those given. They are the average dimensions and we do not think that users will experience any difficulty in following them.

All claims for corrections or deductions must be made within ten days after receipt of goods.

Terms, Cash in Thirty days unless otherwise agreed upon.

Customers will protect their interests by examining goods to see that they have not been damaged in transit, before signing receipts for them.

Boxing and crating, when required, charged for at cost.

No goods insured, unless so ordered.

Full instructions as to making and shipping, must accompany each order. Where no instructions are given, all goods will be made in the regular way and shipped by the most expeditious route.

Permission must be received from us before any goods can be returned; and unless other arrangements are made, the party returning must in all cases pay freight and expenses, and be responsible for any damage to the goods until same are received by us.

As all parts of the "BUNNY" Radiator are interchangeable, to substitute a loop, base or top, or even change the height of a Radiator, it is not necessary to return the Radiator to our Works, as such change can be made at the building, by giving exact size when ordering required part.

All correspondence relating to business should be addressed to

A. A. GRIFFING IRON CO.,
454 Communipaw Ave., Jersey City, N. J.

CODE FOR CORRESPONDENCE.

WITH a view of reducing the expense of telegraphing and facilitating the transaction of business between us, we have completed the following very complete Cipher Code. It will be found that a variety of questions and answers can be sent by means of this Cipher, and a very little practice will demonstrate its great convenience.

Please observe the following in writing a Cipher message :

FIRST. Begin every Cipher word with a Capital letter.

SECOND. Whenever a blank occurs in a sentence, the word or words supplying such blank must follow the Cipher word of the sentence.

SAMPLE MESSAGE.

IN PLAIN LANGUAGE, 38 WORDS.

Ship via Star Union Line two three by twelve, four two by twenty, ten one by eighteen, all extended surface forty-two inches high, tapped one and one-quarter by one inch left hand iron tops, opposite ends.

IN CIPHER, 13 WORDS.

Hyena two Cattle, four Cargo, ten Calico, all Crumble Dotage Frantic Cupola Future.

TELEGRAPH ADDRESS :

GRIFFING IRON WORKS, JERSEY CITY.

CABLE ADDRESS :

Steam and Hot Water vs. Furnace Heat.

IT IS a conceded fact that buildings cannot be properly heated by hot air furnaces unless they are entirely surrounded by other buildings, or protected from cold winds in some way or other.

Even when a building is properly heated by a furnace, the quality of air is not that which is most desirable to sustain human life; first, because it is devitalized with metal heated from 1200 to 1500 degrees Fahr., which robs it of all its exhilarating and tonic properties; secondly, because it is almost always charged with dust; and thirdly, it has been rendered impure by carbonic oxide, which is generated in a furnace whenever there is an insufficient amount of oxygen introduced into it to produce perfect combustion; said carbonic oxide passing through all heated cast iron almost as readily as atmospheric air passes through any textile fabric.

Summarizing these various objections to furnace heated air, we find it under its best conditions devitalizing. Metal heated above even 250 degrees begins to devitalize atmosphere brought in contact with it; what then must be its effect upon air when heated to a temperature of from 1200 to 1500 degrees. We find it frequently charged with dust and fine ashes, and very often poisoned by carbonic oxide, to say nothing of the aptitude of all furnace heated houses to be extremely cold at the point of greatest exposure, on account of the extreme buoyancy of heated air which is overcome by the pressure of cold air of greater density.

Heating by Hot Water or low pressure Steam, has none of the disadvantages mentioned in regard to the furnace heated houses. The metal of Radiators and boilers is never heated by the use of steam to a detrimental degree—namely 250 degrees, unless from 40 to 45 pounds pressure per square inch is resorted to, which is both unusual and unnecessary in the heating apparatus of the present day.

In Hot Water heating, by the open tank system, the pressure is exceedingly small; not more than one pound to every 28.96 inches of vertical water column, and the temperature of the Radiators throughout the house is seldom greater than 175 degrees Fahr.—a temperature 75 degrees below the point where devitalization commences; which point it is impossible to reach in Hot Water Heating.

It has been sometimes argued that houses heated by Direct Radiation are not properly ventilated; this is the case sometimes, but arises from a neglect of the occupants of the building rather than from a radical defect in the system. It is well, (and we always recommend it) to use a certain amount of Indirect Radiation with every system of Steam or Hot Water Heating, as Indirect Radiators are so placed in connection with flues, ducts and registers, connected directly with the outer air as to draw into a house a sufficient quantity of fresh out-door air for ventilation; and if simple outlets in the shape of grates or flues are provided for removing foul air, the ventilation will be constant and sufficient to supply the needs and wants for breathing purposes without being wasteful of fuel; and as Direct Radiators are always placed at the points of greatest exposure, which absolutely insures a thorough diffusion of heat, they do not, as is the case with a furnace, leave the coldest points unprotected.

The objection Fire Insurance Companies have to flues for conveying hot air from the furnace through the wooden partitions to registers, is wholly overcome by the use of Indirect Steam Heat, as the flues are never run from the boilers, but from the Indirect Radiators, which are never near the boiler, and are oftentimes 100 feet away from it, insuring safety from fire and lessening the rate of insurance.

Heating by Steam Direct and Indirect Radiation.

THE amount of Steam Direct or Indirect Radiation required to heat a given space depends on the following conditions, viz: Whether building is protected or isolated; structure, whether brick, stone or wood; if wood, whether sheathed and papered; if brick or stone, whether walls are solid or hollow; points of compass, direction taken by prevailing winds; relative location of rooms to one another; whether room has bay window or not, or has maximum or minimum of glass surface, etc., etc.

Without this information it is impracticable to correctly estimate the amount of Radiating Surface required, and even with it, an Engineer on the premises is better able to judge of the requirements of the case. We are perfectly willing and glad to give advice on this subject or answer any questions that may be asked us, but we do not hold ourselves responsible for the heating of any building, and wish what we say to be taken more in the light of suggestions given for the benefit of our friends and customers.

We are frequently asked if we know the name of some good book treating on the subject of Steam Heating. We answer these inquiries by recommending a work entitled "Steam Heating for Buildings, or Hints to Steam Fitters," written by a very able Engineer. It contains much valuable matter, and is a book of 250 pages. To those who cannot conveniently secure a copy we will mail one, post pre-paid, upon receipt of the publisher's price of \$2.50. Also will send John H. Mills' work entitled "Heat for Warming and Ventilation of Buildings," comprising 2 Vols., handsomely bound and aggregating over 600 pages of valuable matter for \$5.00 per Vol.

While it is impracticable to adopt any fixed rule for computing the amount of Radiating Surface necessary to heat a given space, still the following may serve as somewhat of a guide, but please to bear in mind that the figures given are based on New York City climate.

To ascertain the amount of Steam Direct Radiation necessary to heat a certain room, divide its cubical contents, found by multiplying its length, breadth and height together, by 50, 60, 70, or some other figure as the exigencies of the case may make necessary, or for Steam Indirect Radiation by 35, 40, or 50.

FOR AN ISOLATED RESIDENCE. To compute the amount of Steam Direct Radiation necessary to heat a North or West Room, divide the cubical contents by 60; South or East Room by 70; Bay Window Room, Hall, Bath or Living Room by 60; and Sleeping Room by 70.

For Steam Indirect Radiation for the 1st floor, divide the cubical contents by 35; 2d floor, by 40; and 3d floor by 50.

FOR A RESIDENCE IN A ROW. For Steam Direct Radiation for a North or West Room, Bay-window Room, Hall, Bath or a Living Room, divide the cubical contents by 70; Sleeping Room by 80.

For Steam Indirect Radiation, 1st floor by 40, 2d and 3d floors by 50.

FOR A BUSINESS BLOCK. For Steam Direct Radiation for a North or West Room divide by 75; South or East Room by 85, and an inside Room or Hall by 100.

For Steam Indirect Radiation, 1st floor, divide by 40; 2nd floor and above by 50.

FOR A CHURCH OR OTHER PUBLIC BUILDING. For Steam Direct Radiation, divide by 100; and for Steam Indirect Radiation by 50. A good arrangement for heating such buildings is an equal amount of both Direct and Indirect Radiation or two-thirds Direct and one-third Indirect.

Some of the Advantages of Hot Water Heating.

FIRST.—Absolute Safety.

There can be no danger of explosion in a Hot Water Heating apparatus for it is continually open to the atmosphere through the expansion tank and the only possible pressure on it is the weight of the water in the vertical pipes.

SECOND.—Simplicity and Ease of Management.

All that is necessary is to keep a fire in the heater. No more skill is necessary to manage it, than an ordinary kitchen range. The domestic in the house, or a child can do all that is necessary to be done.

THIRD.—Economy in Fuel.

The slow fire which is all that this system requires is extremely economical in fuel, and as water is a most rapid absorbent of heat, very little heat from the fire is allowed to escape unused up the chimney.

FOURTH.—Noiselessness.

The Hot Water in this system is an unbroken column, kept continually in circulation, from the fact that water of a higher temperature, being lighter, rises, and the colder water, being heavier, falls and takes its place, and all is done without the slightest noise of any kind.

FIFTH.—Perfectly Controlled.

The Hot Water circulation can be checked by partially closing the valve, which is always set with each Radiator; or by entirely closing the valve when no heat is required. In either case the circulation in the balance of the apparatus is not affected in the slightest degree. A uniform heat can be secured at all times and no heat wasted.

SIXTH.—Healthfulness.

No argument is necessary to prove that a uniform temperature is highly conducive to good health and long life, and as a Hot Water Apparatus can be controlled and regulated to a nicety, so as to give a uniform heat at all times, its healthfulness is all-apparent. Ask any Doctor his opinion and he will tell you the same thing, and will, probably add that the air in a house heated by Hot Water has greater humidity and that the occupants are less subject to colds, coughs, catarrh and other diseases of the throat and lungs.

SEVENTH.—Durability.

A good Hot Water Apparatus, such as we offer you, will last as long as any building in which it may be placed, providing it is given ordinary care. It is continually filled with water, which water having been frequently heated, has had all the air driven out of it, and so the apparatus cannot rust, except it be very slightly. We have never known of a single instance where our apparatus has given out except where the most inexcusable and gross carelessness has been exercised. We recommend that the same water which has been in the system during the winter remain there during the summer.

EIGHT.—The Bundy Combination Steam and Hot Water Radiator.

This Radiator can be used for Hot Water Heating in mild weather and Steam Heating in extreme cold weather. The change from Hot Water to Steam or from Steam to Hot Water can be quickly made and any one capable of taking care of either apparatus can do it. Where a building is to be rented this system is a great advantage, for tenants may express a preference for one or the other system and all may be suited in this way, and without additional expense.

Heating by Hot Water Direct and Indirect Radiation.

The amount of Hot Water Radiation necessary to heat a given space depends upon the same conditions enumerated on the preceding page. It may serve as somewhat of a guide to know that the amount of Hot Water Direct Radiation necessary to heat an isolated residence in New York City, is found by dividing the cubical contents of a North or West Room, Bay Window Room, Hall, Bath or Living Room, by 35 and Sleeping Rooms on the 2d floor by 40, and 3d floor by 50.

Indirect Hot Water Radiation should be used discreetly and in most cases for ventilating purposes only. It can often be adopted to good advantage in the Hall, but an Engineer who thoroughly understands his business should be consulted in the matter.

TRADE BUNDY MARK.

Bundy One Row Steam Direct Radiator.

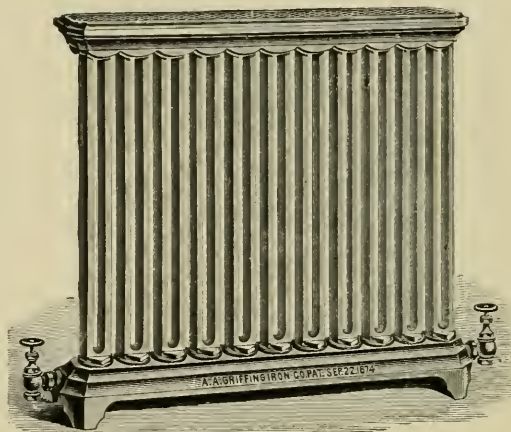

FIG. 1.

Fig. 1 represents the Bundy One Row Steam Direct Radiator, which is without exception the most powerful heating Radiator on the market. It is continually surrounded on all sides by freely circulating air, and being narrow, occupying only 5½ inches of floor space in width, it takes up scarcely more space than is required for an ordinary 1 inch pipe coil. In every impartial test of Radiators the Bundy One Row has always come out ahead; sometimes exelling by 40 per cent., and never less than 10 per cent. For different ways of tapping this Radiator see Fig. 29.

TRADE BUNDY MARK

Bundy Two Row Steam Direct Radiator.

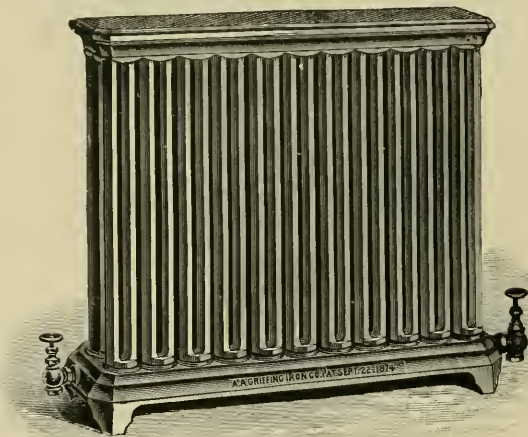

FIG. 2.

FIG. 2 represents the Bundy Two Row Steam Direct Radiator which has an open base in the form of a loop (see Fig. 34), through which sufficient air passes to the inside surface of the Radiator. A Radiator with small air openings, or none at all, cannot compare favorably with the Bundy which has the largest openings of any Radiator made. When used with feed and return on the same end (see Fig. 30), this radiator is equivalent to a One Row Radiator of double the length, owing to the septum in the base, and with our Partition Base one-half of the Radiator can be in use while the other half remains idle, or the entire Radiator may be used at one time. This is a good Radiator for the Direct-Indirect Box Base System (see Figs. 24, 25 and 26). For different ways of tapping see Fig. 30.

TRADE BUNDY MARK.

Bundy Three Row Steam Direct Radiator.

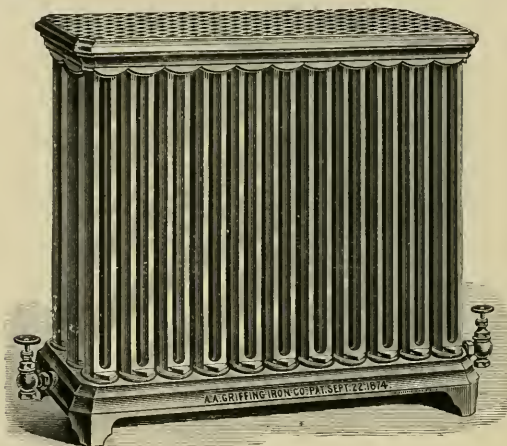

FIG. 3.

Fig. 3 represents the Bundy Three Row Steam Direct Radiator, which has no equivalent in width in any other vertical tube Radiator on the market. It has a base with liberal sized openings through which the air can pass to all the inside surface. This Radiator can be tapped for feed and return on the same end (see Fig. 31), and can be used with perfect success in connection with the One Pipe System, and like all Bundy Radiators, can be furnished with higher legs than usual without extra charge when desired. For different ways of tapping see Fig. 31.

TRADE BUNDY MARK.

Four Row Bundy Steam Direct Radiator.

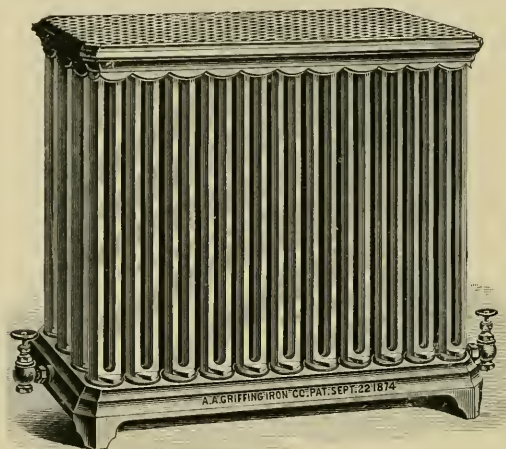

FIG. 4.

FIG. 4 represents the Bundy Four Row Steam Direct Radiator, which has no equivalent in width in any other vertical tube Radiator on the market. The base of this Radiator has a large number of air openings, of liberal size, so that the entire surface of the Radiator is constantly surrounded with freely circulating air, thus giving it an advantage over all other Radiators of equal width of from 25 to 40 per cent greater efficiency. It can be used on the One Pipe System, and can be tapped on same or opposite end as shown in Fig. 32.

Bundy One Row Hot Water Direct Radiator.

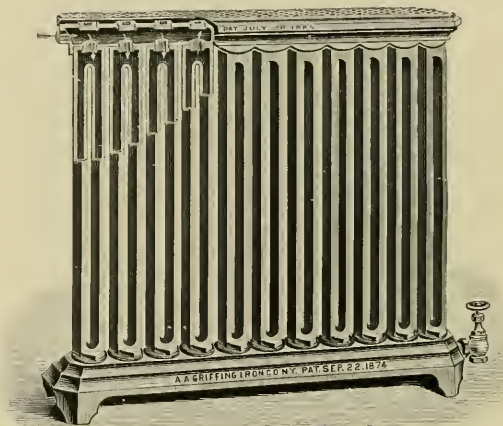

FIG. 35.

FIG. 35 represents the Bundy One Row Hot Water Direct Radiator, which is, without exception, the most powerful Hot Water Heating Radiator on the market. It is made from the Bundy One Row Steam Radiator, which in appearance it resembles, and is very narrow, occupying in width scarcely more space than the ordinary one inch pipe coil. This Radiator holds the minimum amount of water per square foot of surface, and hence the circulation is more rapid and the drain on the heater very much less than when any other style is used; in fact, the saving in fuel where the Bundy Radiator is used makes it the cheapest Radiator on the market. The ease with which the water, after surrendering its heat, falls perpendicularly and passes from this Radiator should commend its use to all desiring the best apparatus.

The cut shows a Radiator tapped for supply connection in the upper circulating chamber, where it can be furnished without extra charge when the overhead system of piping is used or the Radiator is wanted to set on the same or a lower level than the Hot Water Heater proper, but when goods are wanted tapped this way it should be noted on the order, otherwise the regular tapping in the base will be sent (see Fig. 36).

Bundy Two Row Hot Water Direct Radiator.

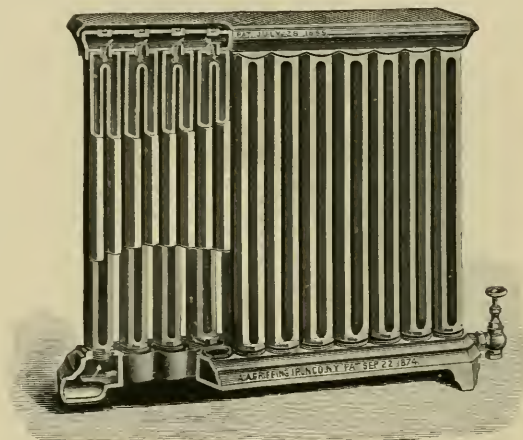

FIG. 36.

FIG. 36 represents the Bundy Two Row Hot Water Direct Radiator which has a base and upper circulating chamber, both made in the form of a loop (see Fig. 34) with large openings, through which freely circulating air can pass to the inside surface of the Radiator. This feature makes this Radiator from 25 to 40 per cent. more efficient than any other Radiator, having only small air openings in the base, or none at all, as is oftentimes the case. It can be furnished tapped for floor and return pipes at the same end, without extra charge, when it is equivalent to a One Row Radiator of double its length, owing to the septum cast in the base and in the upper circulating chamber, and with our partition base and upper circulating chamber, one-half of the Radiator can be in use while the other half remains idle, or the entire Radiator may be used at one time. This represents a great saving of fuel and prevents overheating of apartments. Also this Radiator is a great success in connection with the Direct-Indirect Box Base System (see Figs. 24, 25 and 26), and can be tapped in the upper circulating chamber as shown in Fig. 35 if required, for which no extra charge will be made.

TRADE BUNDY MARK.

Bundy Three Row Hot Water Direct Radiator.

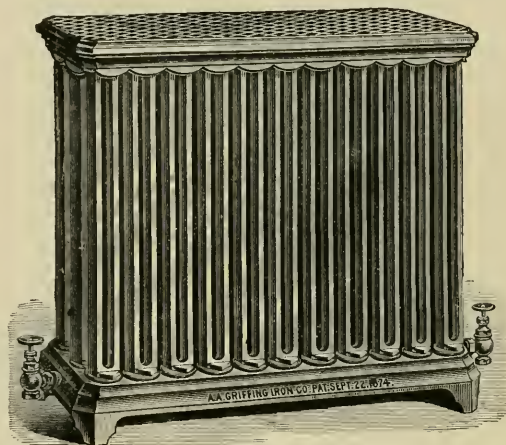

FIG. 36½.

FIG. 36½ represents the Bundy Three Row Hot Water Direct Radiator which, for compactness and efficiency, has no equivalent in width in any other Radiator on the market. Like all Bundy Radiators the base and the upper circulating chambers are liberally supplied with openings for the air to pass through to the inner surface. This Three Row Hot Water Radiator is a special make, costing more than the One or Two Row, and so the list prices below will be found somewhat higher.

It can be tapped for flow and return pipes on the same or opposite ends, or can have flow pipe connect into the upper circulating chamber (see Fig. 35) for use with the overhead system of piping, or when the Radiator is to set on the same or lower level than the Hot Water Heater proper.

Bundy Circular Steam Direct Radiator.

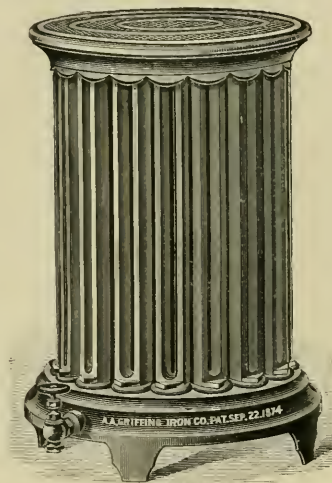

FIG. 5.

FIG. 5 represents the Bundy Circular Steam Direct Radiator. The heating surface of this Radiator is evenly distributed nearest the outer edge of the base, while large openings through the base keep a continual supply of air passing up through the Radiator at all times. It is the most powerful heating Circular Radiator on the market.

Bundy Column Hot Water Direct Radiator.

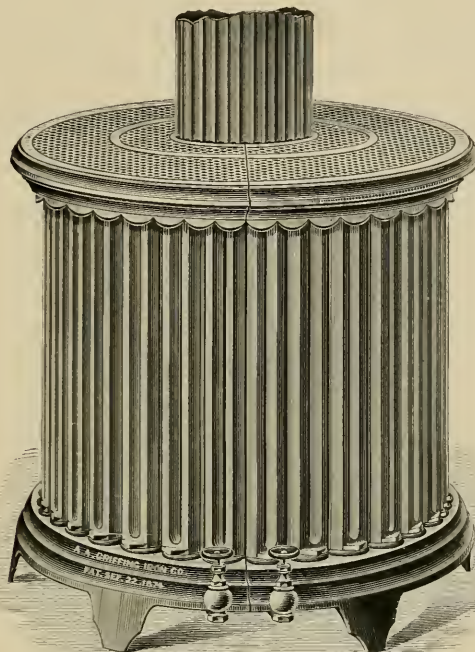

FIG. 7½.

FIG. 7½ represents the Bundy Column Hot Water Direct Radiator, made in halves to encircle columns. It is the only Hot Water Radiator made to go around columns, and the large number already in use and the increasing demand show the great popularity of this Radiator. The space around a column is oftentimes the only available place in which a radiator can be set, and the introduction of this Radiator has filled a long felt want, and received the hearty approval of all Heating Engineers and Architects. Interior loops may be omitted to the extent of 22 in order to reduce the heating surface.

Bundy Column and Circular Steam Direct Radiator.

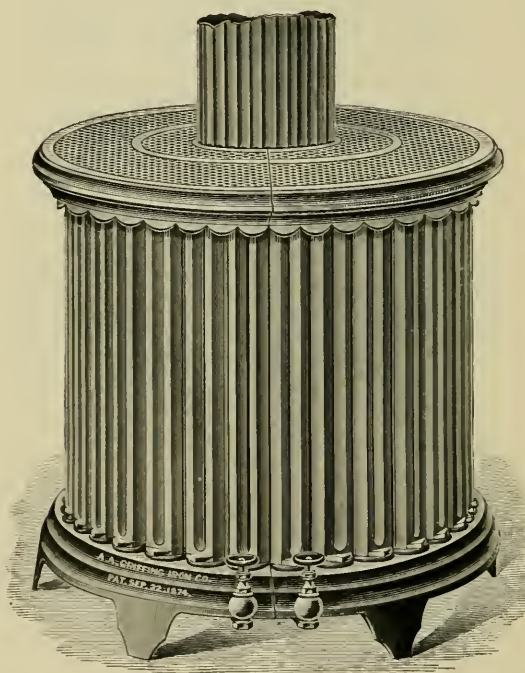

FIG. 8½.

FIG. 8½ represents the Bundy Column and Circular Steam Direct Radiator of extra large size. As it has a large amount of heating surface, it is specially adapted for heating Railroad Depots, Hotel Rotundas, Waiting Rooms, Warehouses, Halls and Public Buildings where a maximum of heating surface in the minimum space is required. For dimensions, amount of heating surface, list prices, and farther information see next page.

TRADE MARK. BUNDY

Bundy Column and Circular Steam Direct Radiator.

FIG. 8½ represents the Bundy Column and Circular Steam Direct Radiator of extra large size. When used as a Circular Radiator it has the appearance of Fig. 5 only much larger. This is, without exception, the largest portable Radiator manufactured in the world. The amount of heating surface it contains is very nearly equal to that found in a mile of inch pipe, and it is so arranged that a very large percentage of its surface is in the outer tier of loops, which, together with 41 liberal sized air spaces through the base, surrounds every part of the Radiator with freely circulating air, hence its great efficiency. As there are a large number of loops in this Radiator the base is a special make, having greater depth of capacity and higher legs, being 7" from floor to center of tapping, and the top also is thicker and stronger, so that the same loops that build with the regular base and top Radiators 36" high, with this base and top build 42" high, or instead of 42" they build 48", measuring in all cases from floor to top of screen or marble, whichever is used. When a maximum of heating surface is desired in the minimum space, this Radiator will be found to be just the thing. As in most cases this Radiator is wanted with Marble top, the price given only includes binder for Marble Top, but when wanted with Fret Work Iron Top, add \$60.00 to List Prices, or with a three inch thick Tennessee or Knoxville Marble top, bevel O. G., or rounded edge, add \$100.00 to List Prices. The same discount named on Bundy Radiators applies thereto.

A few late examples of buildings in which this Radiator has been placed are, "The Rookery" Building, Chicago, Ill.; the Depots of the C. R. R. of N. J. and L. V. R. R., Jersey City, N. J.; and South Brooklyn R. R. and Terminal Co., Cor. 39th St. and 2d Ave., South Brooklyn, N. Y., and the following letter from Mr. Wm. C. D. Gillespie, Engineer of "The Rookery" Building, shows how entirely satisfactory they are.

OFFICE OF "THE ROOKERY" BUILDING.

CHICAGO, Ill., April 26th, 1889.

A. A. GRIFFING IRON CO.,
Gentlemen:

As Engineer of "The Rookery" Building, in which are placed over 800 of your Bundy Radiators, I wish to express my entire satisfaction as to the working of the same. I consider them thoroughly reliable in every respect.

Respectfully yours,

WM. C. D. GILLESPIE,

Engineer "The Rookery" Building.

TRADE BUNDY MARK.

Bundy Corner Steam Direct Radiator.

Fig. 9 $\frac{1}{2}$ represents the Bundy Corner Steam Direct Radiator of extra large size. The advantage of using a Radiator of this type is so great and the demand for them so large that we have made patterns for these extra large sizes and are now in a position to furnish Bundy Radiators for setting in corners of a greater variety than ever before. It very often happens that the only available space in a room is in a corner and certainly its appearance in that location is all that any one can desire.

Parties desiring a large circular Radiator can combine four of these Corners Radiators into one, and as they can be handled in parts they are very conveniently set to place.

Bundy Hot Closet Dining Room Steam Direct Radiator.

STYLE A. FIG. 10.

CROSS SECTION. FIG. 10.

FIG. 10 represents the Bundy Hot Closet Dining Room Steam Direct Radiator, which in this age of modern improvements in appointments of dwelling houses, becomes a necessity as well as a convenience and a comfort where steam heat is used. The design is new and original. These closets are so constructed as to be directly over all of the heating surface in the Radiator, thus utilizing the heat as it passes up through and around the closet in the best manner, as shown by Fig. 10.

The dimensions of these closets are as follows:—Length, 35 inches; width, 14 inches; height, 18 inches; height of Radiators over all, 36 and 42 inches. These closets have one shelf which can be readily removed or adjusted. The doors are of such size as to admit any dish or cover that the closet can accommodate. The heating surface in these Radiators can be varied from 33 to 70 feet each. Centre of tapping $4\frac{1}{2}$ inches from floor.

TRADE BUNDY MARK

Bundy Hot Closet Dining-Room Hot Water Direct Radiator

STYLE D. FIG. 49.

FIG. 49 represents the Bundy Hot Closet Dining Room Hot Water Direct Radiator. In heating by hot water lower temperatures are maintained and the entire warmth of the radiator is needed in the hot closet to secure the advantages sought for. These closets set directly over the entire radiator, thus securing the desired temperature, and in no other Dining Room Radiator can food be maintained at so high a degree of heat.

The dimensions of these closets are as follows:—Length, 35 inches; width, 14 inches; height, 18 inches; heights of Radiators over all, 47 and 41 inches. These closets are the same as are used with our steam Radiators and have one shelf which can be readily removed or adjusted. The heating surface can be varied from 52 to 84 feet each, and the centre of tapping is $4\frac{1}{2}$ inches from floor. The feed pipe can, however, enter the upper circulating chamber of the Radiator, so they can be successfully placed on the same level as the heater or even below.

TRADE BUNDY MARK.

Bundy Steam and Hot Water Direct = Indirect Radiator.

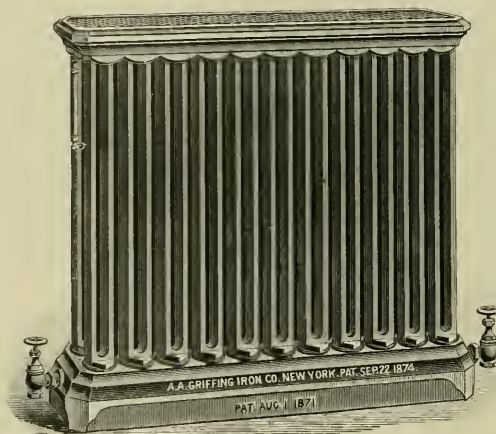

FIG. 24.

FIG. 25.

Figs. 24 and 25 represent the Bundy Steam and Hot Water Direct-Indirect Radiator, extensively used in large buildings where direct heat, as well as good ventilation is required. The base is made in the form of a box fitting closely to the floor all around as per Fig. 24, when the fresh air is admitted under the Radiator through a hole in the floor, or an opening may be left in the back of the Base, as per Figs. 25 and 26. This latter plan is most adopted and goods are furnished this way, with an opening in the back 4" high and 8" long, when other instructions are not given. Among the many buildings heated with this Radiator are: The Standard Oil Company's Building, the United Bank Building, Public Schools, Nos. 17, 31, and 32 of N. Y. City, State Normal School, Albany, N. Y., and District School, Mt. Vernon, O.

NOTE:—The price of these Radiators is 25 cents per Loop in advance of List Prices of Rectangular Steam and Hot Water Direct Radiators.

TRADE BUNDY MARK.

Bundy Steam and Hot Water Direct = Indirect Radiator CROSS SECTION.

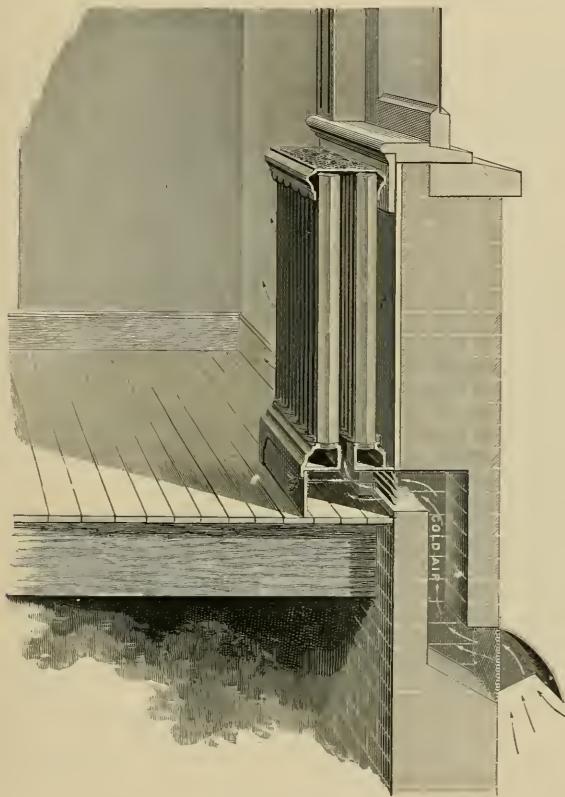

FIG. 26.

This system is economical and efficient and overcomes the difficulty of ventilating rooms where the air has become vitiated and deoxygenized by a large assembly of people, gas lights, and from other causes, by supplying fresh air that is warmed as it passes through Radiators, thus avoiding draughts of cold air that would come from ventilating by open windows.

The Board of Education of New York City, have recently used this method of ventilating class rooms in the public schools with marked success, thus avoiding the necessity of ventilating by open windows, which ruins the health of children sitting near a draught of cold air. Where no Indirect Radiators are used this plan of ventilation is indispensable.

NOTE.—This form of construction in Radiators is covered by Letters Patent, No. 117,675. Any infringement on the rights secured by this Patent will be subject to prompt legal proceedings.

FIG. 26 represents a cross-sectional view of a Bundy Steam and Hot Water Direct-Indirect Radiator, as set up for heating and ventilating. The superior points of this Radiator for this kind of work are self evident; the openings for the passage of air through the base are large and free (see Fig. 34), and compare favorably with those of other Radiators of this class which have openings less than one-third the size, and are nearly useless for ventilation for this kind of radiation; while openings for the passage of air through the Bundy loops into the room to be heated are long and narrow with two openings to each loop being $2\frac{1}{2}'' \times \frac{3}{8}''$ by the length of the loop—thereby giving many more openings than with wrought iron inch pipe Radiators.

Another advantage is that the base panels on our large Radiators can be removed while adjusting and connecting, or to inspect or clean under Radiator. Our small Radiators of this class are made with skirt and legs detached from base, thereby saving labor and expense in connecting up Radiator to cold air duct, and in adjusting Automatic Damper Regulators to close the cold air duct when the Radiator is cold to prevent freezing, and to open it when the Radiator is warm.

TRADE BUNDY MARK.

Bundy Standard Steam and Hot Water Radiator Loop.

FIG. 17.

FIG. 17 represents the top and bottom, full size, of the Bundy Standard Steam and Hot Water Radiator Loop. For cross section view see Fig. 18.

TRADE BUNDY MARK.

Bundy Standard Steam & Hot Water Direct Radiator

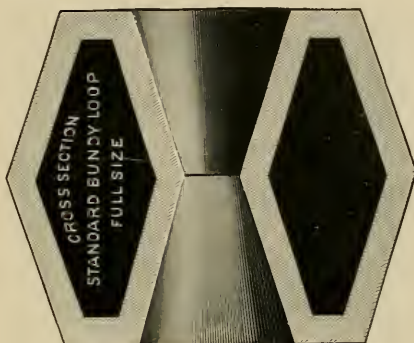

FIG. 18.

FIG. 18 represents a full size cross-section of the Bundy Standard Steam and Hot Water Radiator Loop. Every 12 inches of lineal length represents one square foot of heating surface, full measurement. All Bundy Steam Radiators have one-half square foot of heating surface per loop in the base, and all Bundy Hot Water Radiators have the same amount of heating surface in both base and upper circulating chamber, making one square foot per loop.

Bundy Enlarged Steam & Hot Water Radiator Loop.

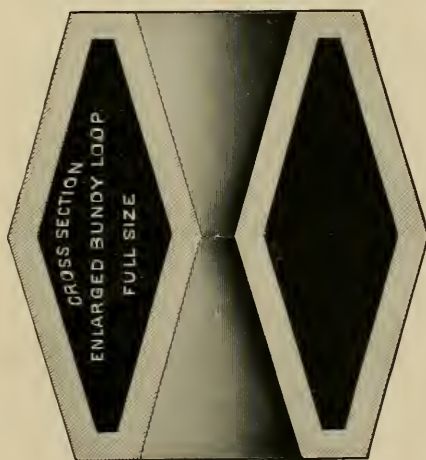

FIG. 19½.

FIG. 19½ represents a full size cross-section of the Bundy Enlarged Steam and Hot Water Radiator Loop. This Loop has 20 per cent. more surface than the Standard Loop. (See cut and description above.)

TRADE BUNDY MARK.

Bundy Ext'd Surface Steam and Hot Water Radiator Loop.

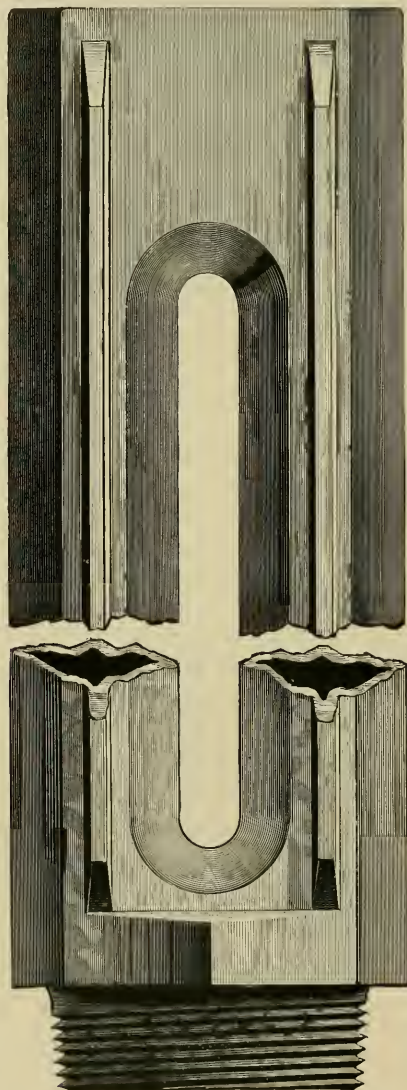

FIG. 19.

FIG. 19 represents the top and bottom, full size of a loop of the Bundy Extended Surface Steam and Hot Water Radiator Loop. (For cross-section view see Fig. 19 $\frac{1}{2}$.)

TRADE BUNDY MARK.

Bundy Extended Surface Steam & Hot Water Radiator Loop.

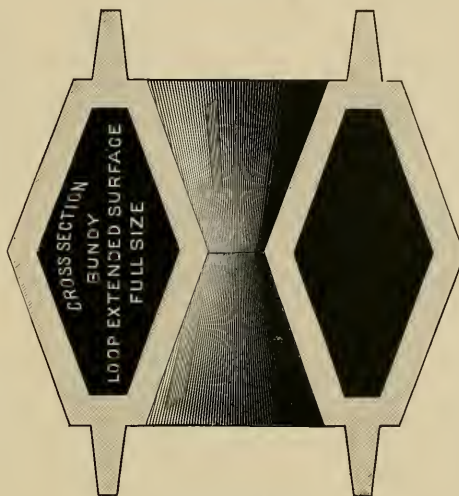

FIG. 19 $\frac{3}{4}$.

FIG. 19 $\frac{3}{4}$ represents a cross-section, full size, of the Bundy Extended Surface Steam and Hot Water Radiator Loop. This Loop has the same amount of surface as the enlarged Loop (see Fig. 19 $\frac{1}{2}$), or 20 per cent more than is contained in the Standard Loop.

Bundy Ext'd Surface Steam & Hot Water Direct Radiator

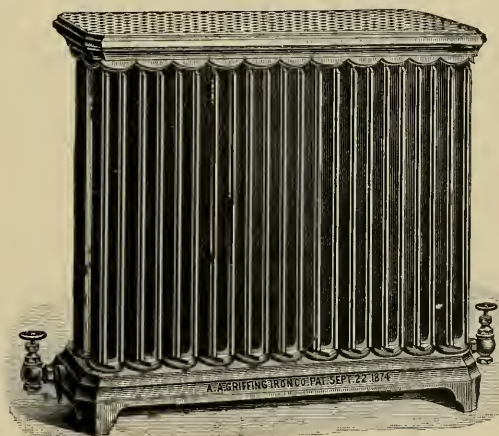

FIG. 16.

FIG. 16 represents the Bundy Extended Surface Loop Steam and Hot Water Radiator, which is furnished in all heights and sizes the same as the Standard or Enlarged Loop.

Bundy Steam & Hot Water Direct Radiator Measurements.

FIG. 29.

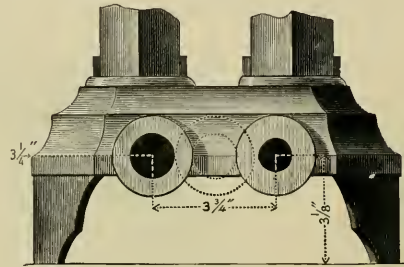

FIG. 30.

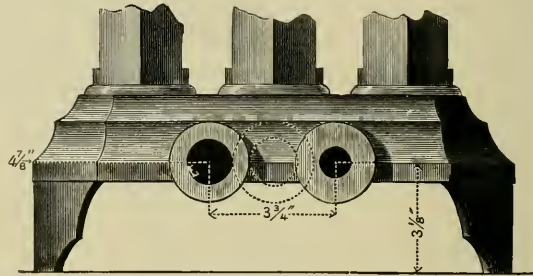

FIG. 31,

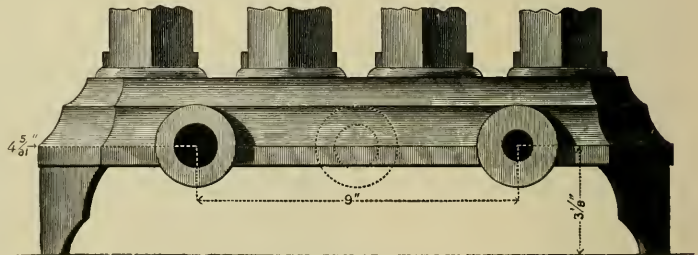

FIG. 32.

FIGS. 29, 30, 31 and 32 represent end views of the Bundy One, Two, Three and Four Row Steam and Hot Water Direct Radiators. The uniform tapping of the Bundy Radiator is a great advantage as it allows the fitter to run his pipes before receiving the Radiators, thus saving much time, as well as enabling him to complete his contracts promptly, and make quick returns for his goods, and secure the advantages to be obtained in this way. In addition to the above, all Bundy Hot Water Radiators may be tapped for feed pipe in the upper circulating chamber, and are made in One, Two and Three Rows of Loops.

TRADE BUNDY MARK.

Bundy Steam and Hot Water Direct Radiator Top.

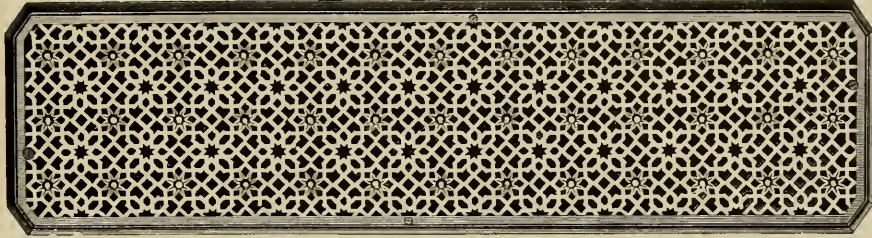

FIG. 33.

FIG. 33 represents the Bundy Steam and Hot Water Direct Radiator Top, called the "Daisy" pattern. It is strong and durable, and the number of daisies represent the number of loops in the Radiator. This fret work top can be quickly removed from the Bundy Radiator and a marble top used instead, an advantage that is highly appreciated by users of these goods.

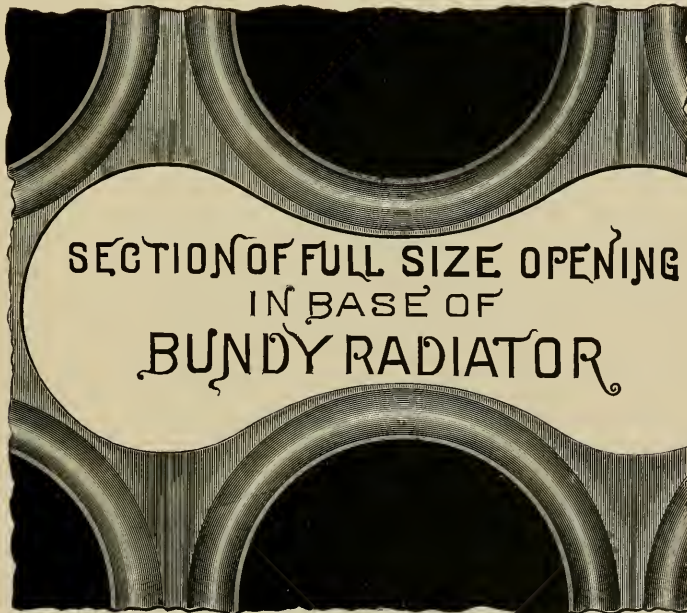

FIG. 34.

FIG. 34 needs no explanation. A comparison of the opening in the base of the Bundy Radiator with that of any other will show an overwhelming advantage in the Bundy.

Bundy Thompson Steam and Hot Water Direct Radiator.

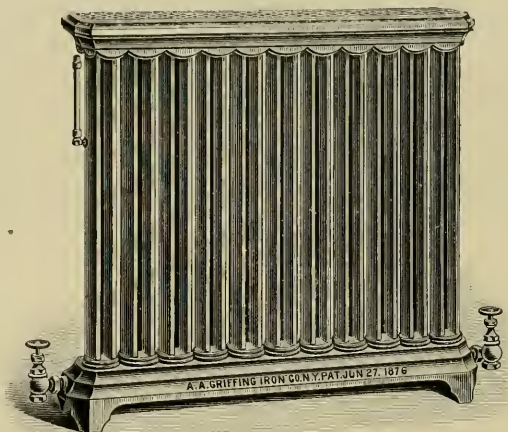

FIG. 20.

FIG. 20 represents the Bundy Thompson Steam and Hot Water Direct Radiator, which is patented June 27, 1876. Like the Bundy Radiator Loop, each one is screwed separately into the base, and represents the same amount of surface as the regular Bundy Standard Loop. Is made in only the standard heights.

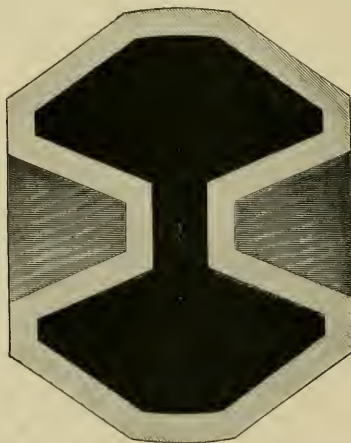

FIG 22.

FIG. 22 represents a cross section of the Bundy Thompson Steam and Hot Water Direct Radiator Loop. It differs from the Bundy Standard Loop in having the two lobes or barrels connected for their entire length, instead of at the ends only.

PRICES QUOTED ON APPLICATION.

TRADE BUNDY MARK.

Bundy Thompson Steam and Hot Water Radiator Loop.

FIG. 21.

FIG. 21 represents the Top and Bottom, full size, of the Bundy Thompson Steam and Hot Water Radiator Loop.

TRADE BUNDY MARK.

A BRIEF DESCRIPTION OF THE Bundy Elite, Bundy Pyro and Bundy Pyro Wall Radiators.

THE BUNDY ELITE RADIATOR

(see Figs. 52 and 53), is a three-pipe construction; in other words each section has three barrels or tubes (patented July 3d, 1877), whereby the circulation is continually in a forward direction, up the central and down the two outside tubes. There is never any conflict as to which pipe will take the ascending and which the descending current as is the case in most sectional Radiators, as the central pipe being more direct, takes the steam first every time. Such a Radiator cannot possibly air-bind or water-pocket. Each section has an individual circulation, and will circulate even after the valves are closed.

THE PARABOLIC CONCAVE SURFACE

(Patented Sept. 10th, 1889), in the Elite Radiator allows more air to come in contact with the surface than with any other Sectional Radiator on the market. The result of this in increasing the efficiency of the Elite Radiator is not necessary to dwell upon with any practical man.

All sections are duplicate and leg arches interchangeable and detachable (patented April 30th, 1889), and so it is an easy matter to add or subtract sections should it become desirable to increase or diminish the heating surface of any Radiator.

IN DESIGN

the Elite is pure Arabesque, of Moorish Architecture, and nothing can be more beautiful for a Radiator. Do not make the mistake of buying a Radiator having a design, pretty enough perhaps when new, but one you will become heartily sick of before you have had it a month. The Elite Radiator design you will never tire of.

THE HEIGHTS

in which the Elite Radiator can be had are regular 24", 30", and 36", but by using legs 1" and 2" higher and lower this radiator can be furnished in the following heights: 22", 23", 24", 25", 26", 28", 29", 30", 31", 32", 34", 35", 36", 37" and 38". For cuts and list prices see pages 78 and 79

THE PYRO AND PYRO WALL RADIATORS

are described in very much the same language as is the Elite above, the only difference being in the design and in the fact that the sections are larger, the Radiator taking less space in length but greater in depth. For cuts and list prices see pages 80, 81, 82 and 83.

TRADE BUNDY MARK.

A BRIEF DESCRIPTION OF THE BUNDY TRIUMPH AND BUNDY DEFIANCE RADIATORS.

THE BUNDY TRIUMPH RADIATOR

is in general form like the Elite as it is a three-pipe construction, but it is a plain Radiator and has a fret-work top.

THE SPECIAL PARABOLIC CURVE

(concave) is used in both Radiators and it very naturally enhances their efficiency. Ninety square feet, and often times less of Triumph and Elite Radiation will do as much work as one hundred feet of other sectional radiation, and when one considers that this means a saving of fuel and attention in proportion to the saving in surface it is very strong argument why the Elite and Triumph Radiators should be used.

THE DETACHABLE AND INTERCHANGEABLE ECCENTRIC TAPPED BUSHING

used in the Elite, Triumph and Defiance Radiators, as well as Climax and Perfect Indirect, allows all the waters of condensation to pass quickly from the Radiator on gravity action. This keeps the surface dry and in the very best condition for greatest efficiency, and should it be desirable to change the size of the piping connecting the Radiator, the bushing can easily be removed and another one used in its place.

THE BUNDY DEFIANCE RADIATOR

(see pages 86 and 87), is designed particularly for use where it is desirable to get in a low Radiator a maximum of surface in a minimum space occupied by the Radiator. It presents a neat appearance when set under a window surmounted by a handsome marble top or when placed in a recess in the wall. Sometimes it is placed behind screens with liberal sized openings through which the air passes into the rooms, and the screens are then decorated in keeping with the room. We know of a library where the screen is painted to represent the backs of books and the effect is very fine.

FOR CUTS AND LIST PRICES SEE PAGES 86 AND 87.

Bundy Pyro Steam Direct Radiator.

FIG. 74.

The accompanying cut represents the Bundy Pyro Steam Direct Radiator. It has an extremely beautiful design, harmonious and pleasing, pronounced by many to be the handsomest ever shown in connection with Sectional Radiators. All sections are duplicates, the end sections being the same as the intermediates; leg arches are detachable and interchangeable, (Pat. April 30, 1889,) and may be placed under any section; a large portion of the surface is parabolic, incurving, (Pat. Sept. 10, 1889,) being specially adapted to withstand high pressure and insure free circulation of air against the entire surface of the Radiator, and is supplied with the Bundy Eccentric Tapped Bushing, (Pat. Feb. 12, 1889,) thus insuring a quick exit for all waters of condensation and noiseless, uniform circulation throughout, as well as preventing a water pocket, water hammer and freezing of the Radiator when not in use in cold weather. This Radiator can be used with excellent success on the One Pipe system. The distance from center of tapping to floor varies, the average being 5 inches.

TRADE PYRO MARK.

Bundy Pyro Wall Steam Direct Radiator.

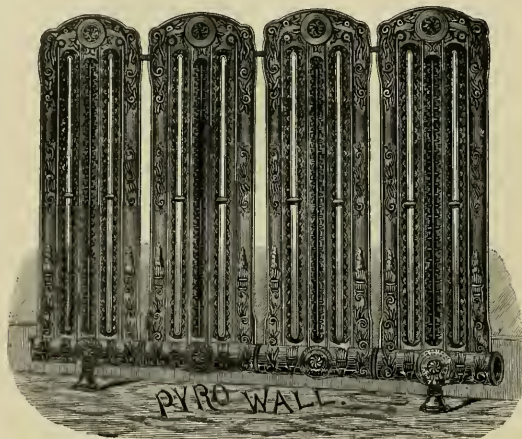

FIG. 76.

FIG. 76 represents the Bundy Pyro Wall Steam Direct Radiator which undoubtedly is the narrowest Radiator in the world, being but 3" wide, from back to front. It occupies scarcely more space than a wall coil of inch pipe, and is by far more efficient, being perpendicular instead of horizontal surface, and so freeing itself of water of condensation much more quickly, is more durable for it is a well known fact that wrought iron rusts out more quickly than cast, especially in coils; and is certainly cheaper when the time consumed in building up coils is taken into consideration, and there are many more joints in coils and hence great liability to leaks.

The Pyro Wall has a handsome design and is just the thing for heating narrow halls and passage ways, and thousands of them have already been used for heating bath rooms where a single section is often times all that is required, and from that up to three or four sections.

There are two sizes of legs furnished with this Radiator, one 5" in diameter and the other 5" in diameter with 1" cut off the rear portion so as to bring the Radiator closer to the wall, either of which is furnished without extra cost, but when parties wish the latter leg, so as to get the Radiator as close to the wall as possible, occupying less space even than a pipe coil, they should specify, in ordering, this size, otherwise the 5" circular leg will be sent.

Center of tapping is 1½" from extreme edge of section and 5" from floor, allowing liberal space under the Radiator for cleaning out.

THIRTY-EIGHT INCHES HIGH.

Width of Legs, 5 and 3 inches as above described; Sections, 3 inches. Each Section represents 8 feet of Heating Surface.

TRADE TRIUMPH MARK.

Bundy Triumph Steam Direct Radiator.

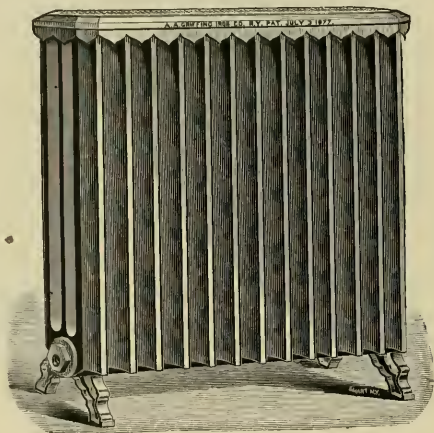

FIG. 47.

Fig. 47 represents the Bundy Triumph Steam Direct Radiator, which is made with a top, and is similar in form to the Bundy Elite Radiator, having three pipes with a circulation up the central and down the two outside pipes. It cannot water pocket or air bind, and the sections being parabolic, (concave or incurving), a more active circulation of air is induced and greater efficiency secured.

The sections are connected by 2"-nipples, cut from extra heavy oil well tubing, which gives nearly 50 per cent. larger openings than is found in most other radiators, as they are usually connected by 1½"-nipples and these are cut from ordinary steam pipe, which is about one-half as strong as extra heavy oil well tubing.

Center of tapping 4¼" from extreme edge of legs and 4¾" from floor.

THIRTY-SIX INCHES HIGH.

TRADE TRIUMPH MARK.

Bundy Triumph Hot Water Direct Radiator.

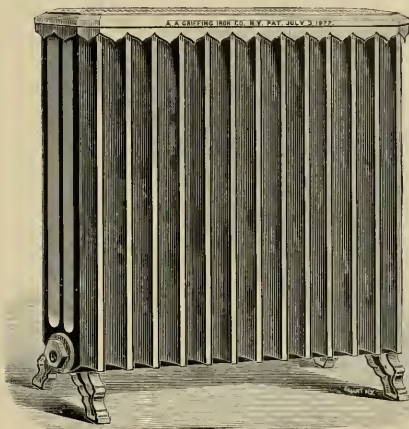

FIG. 48.

FIG. 48 represents the Bundy Triumph Hot Water Direct Radiator of which all sections are duplicates and legs are removable and interchangeable. There is an upper connecting water way, as well as the connection at the bottom, and it is impossible for an air pocket to occur in this Radiator. It has the parabolic (concave or incurving) feature found also in the Bundy Elite Radiator, whereby greater efficiency is secured, in fact this advantage alone gives this type of Radiator from 10 to 15 per cent greater radiating power.

The circulation is positive and uniform, up the central and down the two outside tubes, which being always in a forward direction, there is less friction to overcome in this than any other type of Radiator, all of which advantages are alike possessed by the Bundy Elite, Bundy Pyro, and Bundy Pyro Wall Radiator.

Center of tapping is $4\frac{1}{4}$ " from extreme edge of legs and $4\frac{3}{4}$ " from floor.

THIRTY-SIX INCHES HIGH.

TRADE DEFINACE MARK.

Bundy Defiance Bay Window Steam and Hot Water Radiator.

STEAM, FIG. 85.

HOT WATER, FIG. 86.

The Bundy Defiance Bay Window Radiator, as its name clearly implies, is specially designed for use in bay windows, although it can be used in any place where an irregular-shaped Radiator is wanted. It will fit an angular, circular or any shaped space and will fit the outside of a curve as well as the inside. A drawing or paper templet, showing exactly the shape of space to be fitted, is a great aid in the production of this special make of Radiator.

A marble top setting on the Radiator produces a very fine effect, and the large number of these Radiators now in use attest very strongly their many advantages. In the first place, the bay window is the worst exposure a room can have, and the placing of the Radiator at this point of greatest chill secures a more uniform and positive heat at all times, and certainly saves considerable fuel owing to its location. Then again, by placing the Radiator here, it avoids the use of space in other parts of the room that is of more value for other purposes.

For dimensions and list prices, see next page.

Bundy Defiance Bay Window Steam and Hot Water Radiator.

The Bundy Defiance Bay Window Radiator, it is impossible to describe accurately as regards dimensions owing to the different forms in which it may be furnished. Owing to the fact that the sections in any event must be set with a wedge shaped space between them.

The Bundy Defiance Bay Window Radiator when setting in a circle has a wedge-shaped space between all sections, the size of which, of course varies with each circle, and so it is impossible to give a table of specific dimensions suited to all cases. Also in an angular bay window there is such a shaped space at each angle or change of direction, but as a guide in the use of this Radiator please bear in mind that the sections are 4" thick, measuring from outside to outside of base, which includes a uniform space of $\frac{1}{2}$ " between the front of all sections, whether at angles circles or straight.

The sections, irrespective of legs, which are detachable and of varying height, varying from 1' to 5 $\frac{1}{2}$ ' inclusive of both, by $\frac{1}{2}$ " in height, are 13 and 18" high. Radiators can be tapped any size, right or left hand, and at top or bottom connection for hot water.

Fret work cast iron tops can be furnished when wanted, but they cost extra, as do also marble tops, but the latter are usually used.

*The Defiance Radiator Sections are 18" high, and are furnished, without extra charge, with detachable and interchangeable legs varying in height by half inches from 1' to 5 $\frac{1}{2}$ " high, and so build Radiators of the following heights:—19", 19 $\frac{1}{2}$ ", 20", 20 $\frac{1}{2}$ ", 21", 21 $\frac{1}{2}$ ", 22", 22 $\frac{1}{2}$ ", 23" and 23 $\frac{1}{2}$ ".

When no height is mentioned, Radiators 23" high will be furnished.

*The Defiance Radiator Sections are 13" high, and are furnished, without extra charge, with detachable and interchangeable legs varying in height by half inches from 1' to 5 $\frac{1}{2}$ " high, and so build Radiators of the following heights:—14", 14 $\frac{1}{2}$ ", 15", 15 $\frac{1}{2}$ ", 16", 16 $\frac{1}{2}$ ", 17", 17 $\frac{1}{2}$ ", 18" and 18 $\frac{1}{2}$ ".

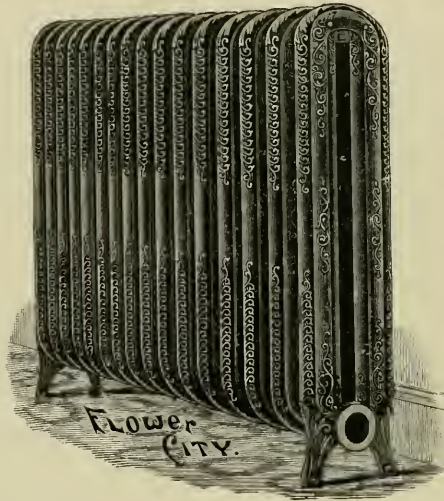

When no height is mentioned, Radiators 17" high will be furnished.

All Regular Hot Water Goods Tapped 1 $\frac{1}{4}$ " X 1 $\frac{1}{4}$ ", "Right Hand."

TRADE BUNDY MARK.

Flower City Steam and Hot Water Direct Radiators.

Figs. 95 and 96 represent the Flower City Direct Radiator for Steam and Hot Water Heating. This Radiator has a handsome design and presents a neat appearance, especially when decorated. When desired it can be furnished with a cast iron ornamental top, which may be either plain or nickel plated, or a marble top; but these are extra, for which a moderate charge is made.

When a special tapping is wanted please state definitely on order what it is, otherwise regular tapping will be sent. The distance from floor to centre of tapping varies according to size of tapping used; being as follows: $\frac{3}{4}$ " tapping, $3\frac{3}{4}$ "; 1" tapping, $3\frac{1}{2}$ "; $1\frac{1}{4}$ " tapping, 4"; $1\frac{1}{2}$ " tapping, $4\frac{1}{8}$ "; and 2" tapping, 4".

TRADE BUNDY MARK.

Bundy Duplex Stairway Steam Direct Radiator.

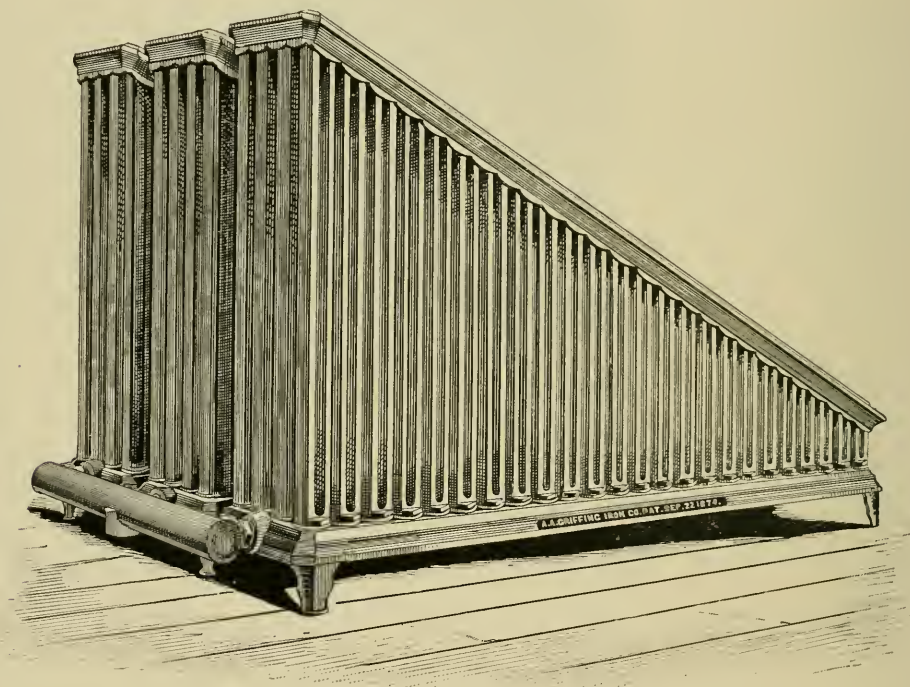

FIG. 114.

Fig. 114 represents the Bundy Duplex Stairway Steam Direct Radiator. It is being largely introduced in hotel halls, lobbies and business blocks where it is possible to place a Radiator under the stairs, thus using floor space that is of little value for any other purpose. In this location the Radiator is out of the way and presents a very attractive appearance.

Usually the Radiator is built on the high leg base, allowing a large space underneath for the air to pass through and up between the loops, so in point of efficiency this Radiator holds a high place. The Rookery Building, Chicago, is a late example where this Radiator is in use.

Prices furnished on application.

LOOPS ONLY, STEAM.

For Rectangular, Circular, Corner and Column Radiators.

* HEIGHT OF RADIATOR.	STANDARD.	ENLARGED.	EXTENDED.
42"	\$2.30	\$2.75	\$2.65
36"	2.10	2.40	2.30
30"	2.00	2.35	2.25
24"	1.85	2.15	2.10

LOOPS ONLY, HOT WATER.

45"	\$3.25	\$3.75	\$3.65
39"	3.00	3.35	3.25
33"	2.85	3.25	3.20
27"	2.70	3.05	3.00

* This refers to height of Radiator the loops built up with the regular height of legs, for example, a loop 24½" long would build 30" high, with base and top, and therefore is listed as 30" high.

The price applies to all intervening heights of loops, i. e., a steam loop that builds 40" high is listed the same as the 42" height.

Discount on Bundy Standard Radiator applies to this list.

TRADE BUNDY MARK.

Bundy Improved Duplex Radiator Base.

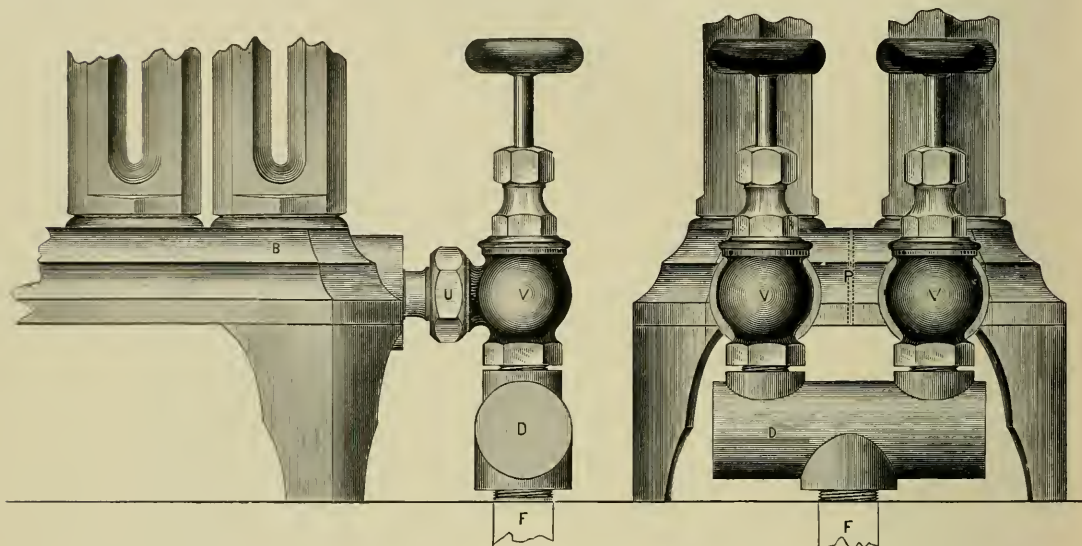

FIG. 99.

FIG. 100.

Figs. 99 and 100 represent two views of the Bundy Improved Duplex Radiator Base with which the Bundy Two-row Radiator is made equivalent to three distinct sizes. The partition, P, divides the base into separate compartments, regulated and controlled by the valve V. The header D, is used for convenience and economy in connecting up, saving pipe and fitting, and cutting of the floor. To secure the necessary room for the header the high leg Bundy Base has to be used, in which the center of tapping, for any size of hole, is $4\frac{1}{4}$ " from floor; this allows ample space for cleaning out under the Radiator, and for free circulation of air.

In point of economy the Bundy Duplex Base saves in fuel alone, many times its slight additional cost in a very few weeks, and its value in preventing over heating of apartments, and the perfect control of temperature it gives, cannot be over-estimated. The sudden change of temperature when an entire Radiator is opened or closed, makes it necessary during the moderate weather of the fall, winter and spring, representing fully 75 per cent. of the heating season, to turn on and off the Radiator at short intervals, engendering much loss of time, wear of valves and general inconvenience, all of which the Bundy Duplex Base effectually prevents.

For heating of hotels, business blocks, churches, schools, theatres, residences, and in fact every style of building known to modern architecture, the Bundy Duplex Base will be found of value. It represents an investment, the profits of which are greater than can possibly be secured in any other way. The Bundy Radiator is the only one that can be fitted up in this way, but it can be furnished for both steam and hot water heating.

It can be used with either one or two pipe system. With two pipe, two headers and four valves are required to each Radiator; with one pipe, one header and two valves.

IN VERY MODERATE WEATHER open the valve or valves that control the rear row of loops the heat from which is moderated considerably by passing through the front row of loops, which are not in use.

IN FAIRLY COLD WEATHER open the valve or valves that control the front row of loops, the rear row remaining idle, when the heat by passing direct and unimpeded into the room gives a considerably higher temperature than in the case above described.

IN EXTREMELY COLD WEATHER open all the valves, when the radiator will throw out heat to its full capacity and give the desired temperature in the apartment in the coldest of weather.

The Base cost, exclusive of header, is \$4.00 list per Radiator, which should be added to prices found on pages 22, 23, 30 and 31.

Header costs \$1.00 list each.

Discount on Bundy Radiators applies to both base and header.

TRADE BUNDY MARK.

Bundy Gold's Pin Steam Indirect Radiator.

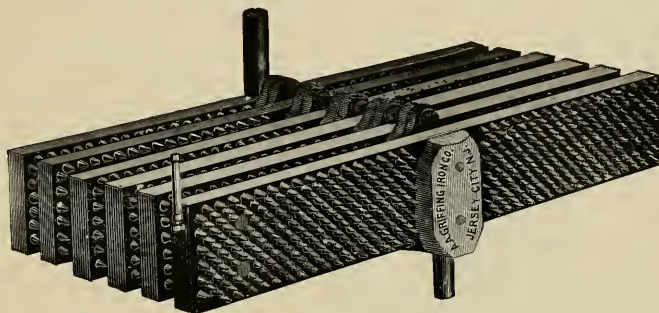

FIG. 15.

Fig. 15 represents the Bundy Gold's Pin Steam Indirect Radiator, which unlike other Radiators of this type, is tested to 100 lbs. pressure instead of 40 lbs. This Radiator is so well known to the trade that it requires no further description, but Architects and users of this Radiator would serve their own interests by specifying the Bundy Gold's Pin and using none other.

Each section is 40½ inches long, 6½ inches deep at ends, 10½ inches deep over all at center, ¾ inches thick over all at center, contains 925 pins and represents 10 square feet of surface.

Prices furnished on application.

Bundy "Famous" Pipe Hanger.

A FEW OF ITS ADVANTAGES :

1st. There is no bolts or nuts to be lost, or the nuisance of screwing or unscrewing nuts if desired to be removed.

2d. It is an expansion hanger having 2½ inches play for expansion, without the use of a roller on the bottom.

3d. It can be removed or replaced in an instant.

4th. The lag screws can be furnished any length, thus avoiding the use of couplings and pipe to lengthen them. The lag screws can be cut off and threaded, as the hangers are tapped for standard pipe threads.

FINALLY. It is made of Cast Iron, is cheaper, neater looking, and has more valuable points than any other article of its kind made, and should be used by every first-class plumber and pipe-fitter.

Bundy Horizontal Indirect Radiator.

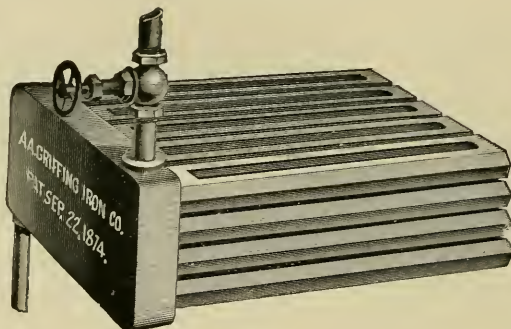

FIG. 12.

FIG. 12 represents a 4x5 Bundy Horizontal Indirect Radiator. These Radiators are adapted to either high or low pressure steam, and are made with the Standard, Enlarged, and Extended surface loop, and occupy less space with the same amount of surface than any other; often a very important point in the economy of space and material used in enclosing the Radiator.

The Old Ladies' Home, 104th Street, and 10th Avenue, New York, Brooklyn Savings Bank, Packer Institute, Brooklyn, are some of the buildings heated with these Radiators.

Bundy Angle Indirect Radiator.

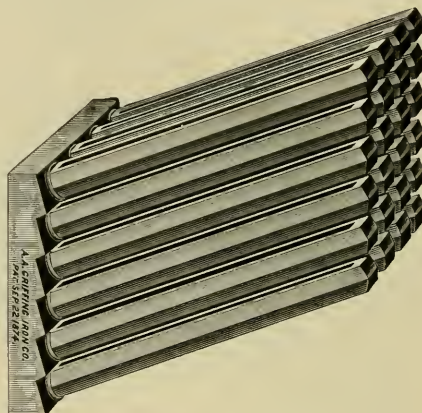

FIG. 13.

FIG. 13 represents a 6x4 Bundy Angle Indirect Radiator, with loops set at an angle of 22 degrees, securing a perfect circulation of steam, and return of condensation. The loops are placed indirectly over each other, evenly dividing up the air passing through the Radiator, and utilizing the heating surface of the loops. These Radiators are adapted to either high or low pressure steam, and are made with either the Standard, Enlarged, or Extended Surface Loops.

These Radiators are in use in the Lehigh University, Pa.; the High School, Lawrenceville, N. J.; at the Hudson River State Asylum, Poughkeepsie, N. Y., and give entire satisfaction.

TRADE BUNDY MARK.

Bundy Angle Indirect Radiator Stack.

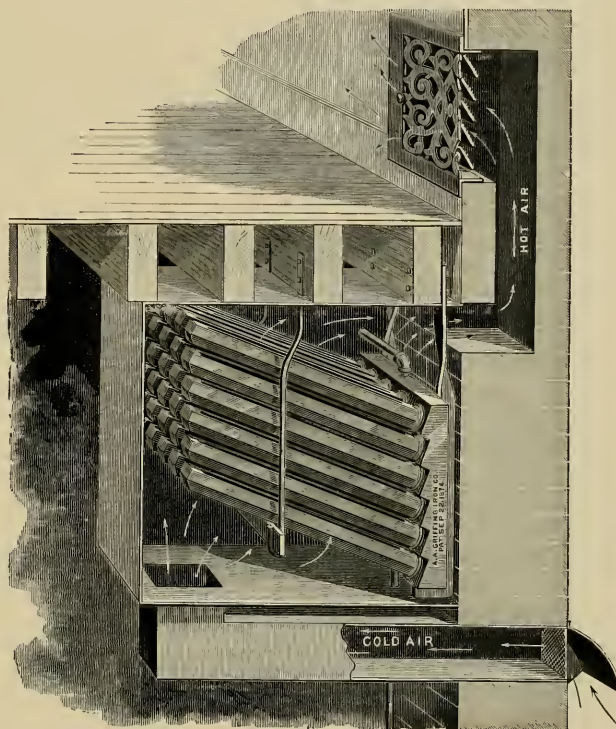

FIG. 14½.

FIG. 14½ represents the Bundy Angle Indirect Radiator with loops set at an angle. This form of Radiator has all of the advantages of a vertical tube Radiator in circulation as the air is easily expelled and the condensation has a free passage to outlet. The air to be warmed in passing through a stack of this kind is more thoroughly broken up and warmed than by any other on account of the double pipes. These Radiators are durable and efficient for high or low pressure steam. They were first used in the Hudson River State Asylum at Poughkeepsie, N. Y., in competition with other kinds of Indirect Radiators, where they gave such perfect satisfaction that they were approved and used in the recent additions to the heating apparatus in 1884-5.

With permission we publish the following testimonial :

HUDSON RIVER STATE ASYLUM, POUGHKEEPSIE, N. Y., February 26, 1883.

This is to certify that the Institution has used the Bundy Indirect Angle Radiators in the centre building for the last four or five years, and they give satisfaction in every way as an indirect heater, and would recommend them to those requiring steam heat for buildings.

WILLIAM C. ATKINSON, Chief Engineer.

TRADE BUNDY MARK.

Bundy Climax Hot Water or Steam Indirect Radiator.

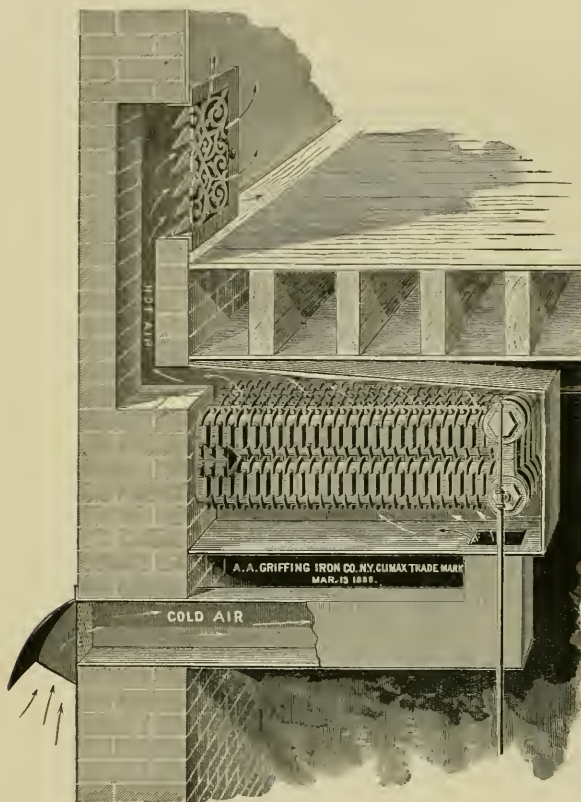

FIG. 27.

Fig. 27 represents the **Bundy Climax** Indirect Radiator for either Hot Water or Steam, High or Low Pressure, although it is specially designed for Hot Water, in which capacity it is not excelled by any other Indirect Radiator on the market. For cut of section see Fig 28.

CIRCULATION MOST POSITIVE AND UNIFORM.

Having larger openings throughout, and 2" connections between sections, above and below, which are from 60 to 80 per cent. larger than those found in most other Indirect Radiators, and having no diaphragms whatever, the circulation in the Climax is exceedingly positive and uniform.

NO PACKED JOINTS, BOLTS, NUTS, RODS, WASHERS, Etc.

All joints are screw-thread connections, iron to iron, no packings, bolts, nuts, rods, washers, etc., being used anywhere; hence leaks of any kind very rarely if ever occur. As all sections are duplicates, they can be easily and quickly made into stacks, and there can be no possibility of a mistake being made in the selection of sections, for with our special tapping, patented in the United States and Canada, June 14, 1887, March 13, 1888, and Feb. 12, 1889, any section may be used as an intermediate, feed or return, and it makes no difference which end of the stack is connected for feed and which for return. The importance of these advantages are at once apparent to the practical man, and as all these features

are fully covered by American and Canadian Patents, which have cost a great deal of money, notice is hereby given that all users of devices infringing on these patents will be promptly prosecuted.

Although heating by Indirect radiation is not quite as cheap as by Direct, it can often be used to advantage where floor space cannot very well be had; and all Architects, Steam and Hot Water Engineers recognize the fact that the use of a certain proportion of Indirect radiation in every house heated by steam or hot water, either in the parlor, hall or dining room, is a valuable accession, for it admits fresh air that is positively heated.

The Bundy Climax Radiator is tested to 100 lbs. hydraulic pressure to the square inch, just prior to being shipped, and where the sections are made into stacks before shipping, and they are often ordered this way, they are tested twice, once in the section and again in the stack, when all joints are found to be absolutely perfect before being sent out. The Radiator is compact, occupying the minimum space, and has from 40 to 60 per cent. more plain surface, as compared with extended surface, than any other Indirect Radiator made. The fins are set "staggered," which together with the high efficiency of the Radiator prevents any air from passing into the rooms to be heated without first being perfectly warmed. The Radiator divides and sub-divides and stratifies the air so perfectly as to be usually adopted wherever a force fan is used to supply the fresh air. A specially designed bearing bar is cast on the under side of each section, running longitudinally, which facilitates very greatly the moving of the stack on the cross bars, as well as in transporting it from place to place.

* Length of stack refers to the total length found by multiplying the width of one section (3½") by the number of sections in the stack. This does not include the eccentric tapped bushings, which add 2' to the total length of the stack as given above. These figures may vary a trifle owing to the fact that some Fitters will draw the sections closer together than others in building them up, but the above is a fair average.

† Width of stack refers to the length of the sections.

FIG. 28½.

Fig. 28½ represents the Wrench used in building the **Bundy Climax** and **Bundy Perfect** Sections into stacks. Every Fitter should have one of these handy tools in his kit, as well as a Bundy Loop Wrench, (see Fig. 57).

Price, \$2.50 each.

TRADE CLIMAX MARK.

Bundy Climax Steam or Hot Water Indirect Radiator.

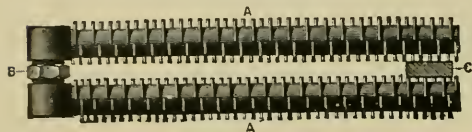

Fig. 27 1/2.

Fig. 27 1/4.

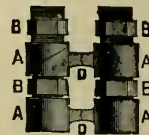

Fig. 27 1/2.

INSTRUCTIONS FOR MAKING INTO STACKS.

In the accompanying cuts, A are Bundy Climax cast iron sections, B are connecting cast iron nipples, C are two hard wood wedges about 1x8 inches in size at their butt ends, and D are thin connecting strips of iron strengthening the sections to insure perfect casting and safe transportation.

Break the strip of iron (D) with a light blow of a hammer, then lay the section on its side and with the fingers start in the two nipples (B) about half a turn, then place the two wedges (C) one upon the other, as shown, and lay the second section so that the two holes tapped in it shall be directly over the nipples. Now adjust wedges (C) so that both ends shall be equidistant from each other. This being accomplished commence to enter nipples into the second section, and as they make together spread the wedges at the opposite end so that all parts of the second section shall advance toward the first at the same speed.

In screwing up the nipples, care should be used that each are turned alternately, and not more than one-half a turn at a time, thus avoiding any possible binding of the joints.

With two sections connected proceed as before with the third and so on until the stack contains the requisite number of sections.

As all sections are exact duplicates, should the stack in use prove too small, it is an easy matter to add to it another section. If, on the other hand, it is too large, a section can readily be removed.

When one stack is desired to heat two or more apartments and is placed at the base of two or more flues for that purpose, one or more pairs of longer nipples are furnished accommodating the division and subdivision of the stack by the insertion of tin partitions as necessary. This simple arrangement carries to a mathematical nicety the proper proportion of heat to each register and is an advantage fully appreciated by the trade, and of vital importance to the consumer. In this way one stack sufficeth for the heating of two, three and sometimes four or more apartments.

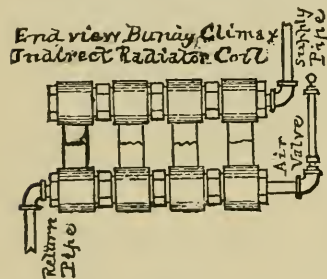

Fig. D.

PROPER LOCATION OF AIR VALVE.

The location of the air valve depends upon the way the pipes lead to and from the radiator. The accompanying cuts will show the usual methods of piping and the proper location of the air valve in each case.

Too much importance cannot be attached to the use of a good, sensitive and durable air valve, and the one shown is of our own manufacture and highly endorsed. A further description of this air valve is found on a later page in this book under the heading of Automatic Air Valves. They are furnished for both Direct and Indirect Radiators.

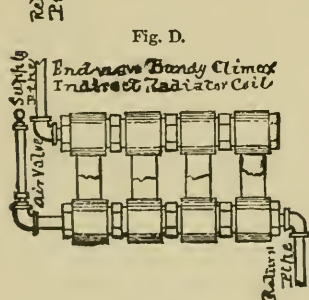

Fig. E.

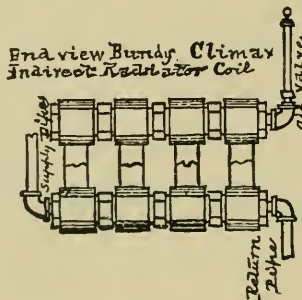

Fig. F.

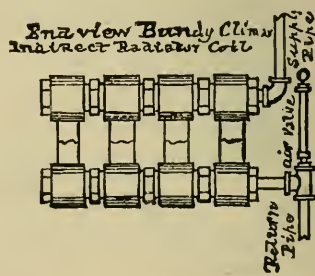

Fig. G.

TRADE PERFECT MARK.

Bundy Perfect Steam Indirect Radiator.

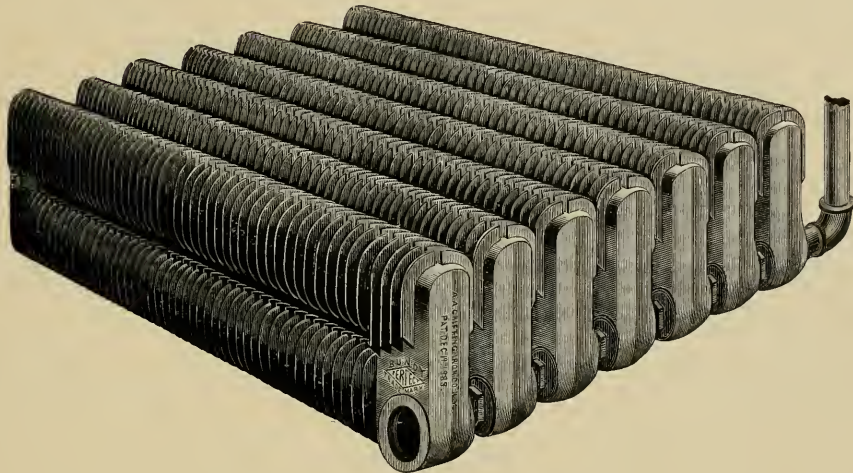

FIG. 284.

FIG. 284 represents the **Bundy Perfect** Indirect Radiator for heating by High and Low Pressure Steam. For cut of section see Fig 284. It has larger opening, than any other Indirect Radiator, and the sections are connected by 2" nipples. These, with many other advantages which this Radiator possesses, make the circulation in the Bundy Perfect absolutely positive and uniform, unexcelled by any other Radiator on the market. All who have used it or seen it tested are surprised at its perfect operation. The size of connections used in most other Indirect Radiators is 1½", which is wholly inadequate, and it is not an uncommon thing to find a Radiator with even a smaller connection than this. Now when one considers that a 2" nipple has 77.7-9 percent. greater capacity than one 1½" in size, it will clearly be seen what advantages are secured by the use of the Bundy Perfect. When heating by low pressure or exhaust steam, or in starting circulation in very cold weather when condensation is very rapid, the liberal size of the connections in the Perfect (2") together with the fact that they are in a line and a trifle lower than the balance of the Radiator is a very important feature, for it allows a quick and natural exit for the waters of condensation. No smaller connections than 2" can accomplish this result, and a failure to do so causes the vexatious hammering and cracking noises prevalent where an inferior Radiator is used or the piping is not properly done.

ALL SECTIONS ARE EXACT DUPLICATES.

In other words, there are no *head* or *tail* sections among them, or right and left intermediates, but all are exactly alike, and so there is no time lost in selecting them or the slightest possible chance of a mistake occurring in assembling the sections into stacks, for such a thing could not possibly happen. The word "inlet" is cast on the inlet side of each section, so that when the stack is complete one can tell at a glance which is the feed end and which the return, but it is a peculiar fact and worthy of mention, that practical use and tests have shown that should a stack of Bundy Perfect be fed from the return end that no difficulties would arise therefrom, nor the efficiency of the Radiator be impaired, the only difference being that in part of the Radiator the waters of condensation would flow in an opposite direction from that of the steam, but in a Radiator having such liberal sized openings as the Bundy Perfect, this does not matter. From the above it will be clearly seen that the Bundy Perfect is the simplest and most convenient Indirect Radiator made, and that it is impossible for a mistake to be made in connecting it up or setting it to place. Perfect drainage is secured without elevating any portion of the stack more than another, for it is so constructed as to secure this when set level. The waters of condensation flow in the same direction as the steam, its operation throughout being on gravity action. Particular attention is called to the specially designed bearing bar running longitudinally the full length of each section on its under side, which facilitates very much the handling of a stack after it has been made up. The practical Steam Fitter will appreciate this feature, for it enables him to move the stack with perfect ease on the cross bars, as well as to transport it from place to place.

NO PACKED JOINTS, BOLTS, RODS, NUTS, WASHERS, Etc.,

are used in the Bundy Perfect Radiator, all joints being screw thread connections, iron to iron. There is but one connection between sections, therefore they can be very easily and quickly assembled into stacks of any required size, particularly so by following the instructions given with the goods, which explain how this can be done without counting in the threads as is generally the case where right and left hand nipples are used. A stack is also very quickly reduced to sections.

GREATEST DURABILITY AND FREEDOM FROM LEAKS.

The firmness of joints in the Bundy Perfect, together with the fact that all are screw thread connections and are made by the latest and best of machinery, combine to make this the most durable and best radiator on the market for Indirect heating by Steam. Should it be desired to increase or diminish the size of any stack, sections can be quickly and easily added or subtracted, a feature highly desirable in any Radiator. This and all other special features found in the Bundy Perfect are fully covered by letters patent in the United States and Canada, dated June 14, 1887, and February 12, 1889. We caution parties not to use goods that infringe on our Patents, for our rights have cost us a great deal of money and we will hold infringers strictly accountable for damages.

TRADE PERFECT MARK.

Bundy Perfect Steam Indirect Radiator.

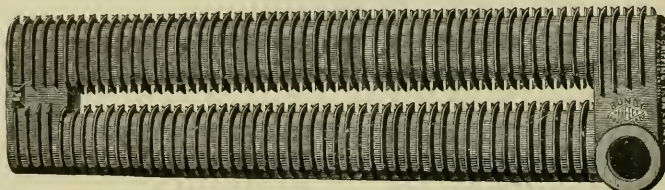

FIG. 28½.

Fig. 28½ represents a section of the Bundy Perfect Steam Indirect Radiator. For cut of stack see Fig. 28¼.

ALL SECTIONS TESTED TO 100 LBS. HYDRAULIC PRESSURE.

All sections are tested to 100 lbs. hydraulic pressure to the square inch before being sent out, and when ordered built up into stacks, which is very frequently done, then they are tested twice, once in the section and again in the stack when the joints are also tested to see that they are perfectly tight. A leak of any kind rarely if ever occurs in this Radiator.

* Length of stack refers to the total length found by multiplying the width of one section, (3½') by the number of sections in the stack. This does not include the eccentric tapped bushings which add 2' to the total length of the stack as given above. These figures may vary a trifle owing to the fact that some Fitters will draw the sections closer together than others in building them up, but the above is a fair average.

† Width of stack refers to length of sections.

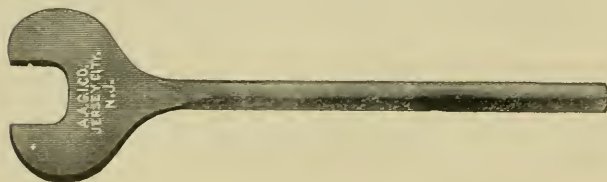

FIG. 28¼.

Fig. 28¼ represents the wrench used in building the Bundy Perfect and Bundy Climax sections into stacks. Every Fitter should have one of these handy tools in his kit, as well as a Bundy Loop Wrench. (See Fig. 57.)

Price, \$2.50 each.

The Eureka Straight Connection Steam Indirect Radiator.

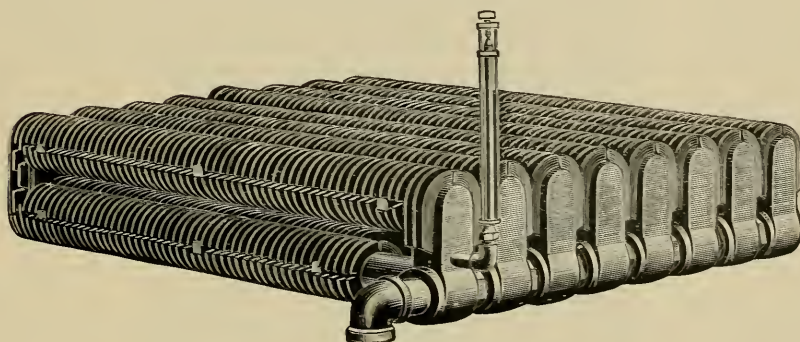

FIG. 93.

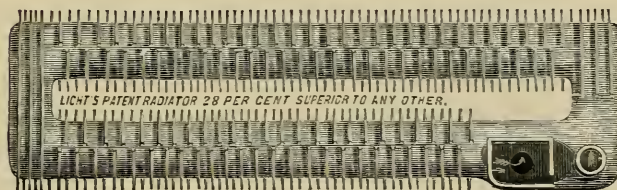

FIG. 94.

FIG. 85 represents a stack of the Eureka Indirect Radiator when set to place, and Fig. 86 a single section with one end cut away to show the direction taken by the steam in circulation. All sections are duplicates.

AMOUNT OF HEATING SURFACE.

14 square feet per section.

DIMENSIONS OF STACKS.

Total length of section.....36 inches.

Total depth of section.....14 1/4 "

Each section occupies, when made up in a stack, 3 5/8 inches in width.

NOTICE—Always connect the Steam Feed Pipe to the right of stack as shown on cut. Tapped any size, right or left hand.

Eureka Window Indirect Steam Radiator.

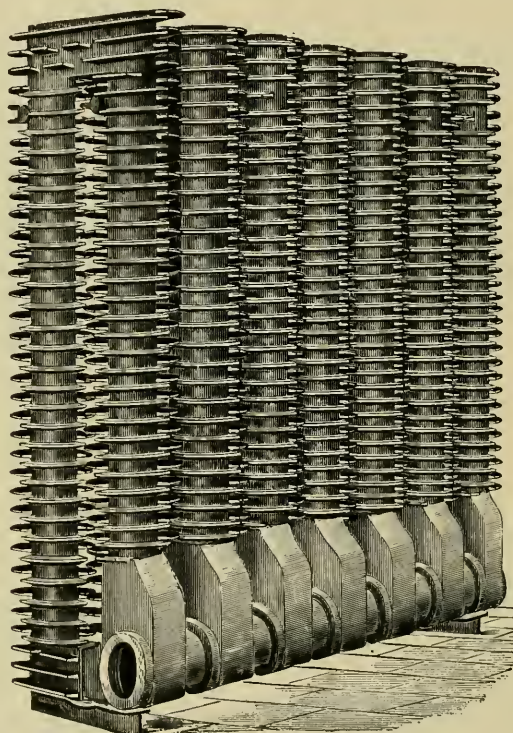

FIG. 87.

Fig. 87 represents the Eureka Window Indirect Steam Radiator which is furnished in four different heights, viz. : 20", 24", 30" and 36". It is set to place on specially designed feet, two inches high in the clear, which are easily and quickly fastened to the end sections.

This Radiator is specially adapted to that class of buildings where fresh air supply is required, and where it is not consistent to carry the flues to upper stories, as with Indirect proper. The Bundy Box Base Direct-Indirect Radiator, shown by figs. 24, 25 and 26, is used for the same purpose.

In front of the Eureka Window Radiator an open work screen of brass or iron can be set through which the heated air passes into the room. It is called a Window Radiator, owing to its special adaptation for use under windows, for which purpose the various heights made makes it very convenient. An opening in the wall or floor back of the Radiator allows for the inflow of fresh air.

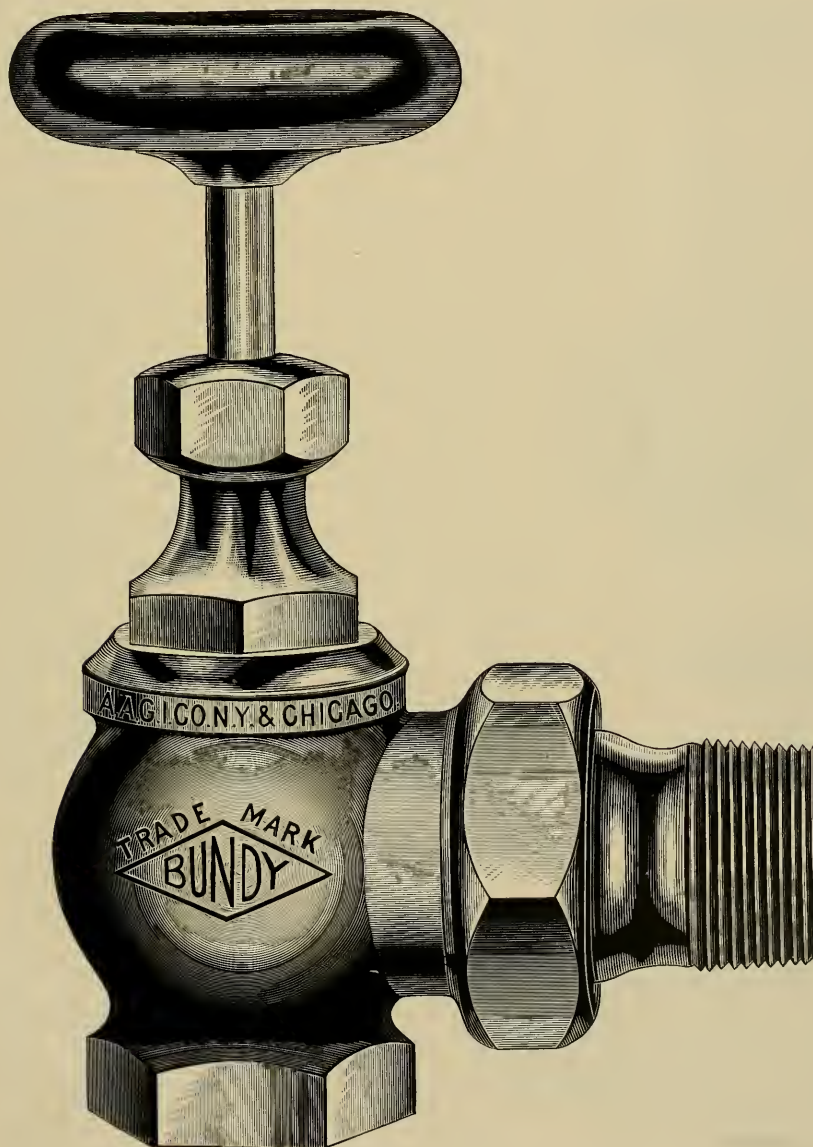

CAPACITIES AND DIMENSIONS.

TRADE BUNDY MARK.

Bundy Improved Full Opening Radiator Valve.

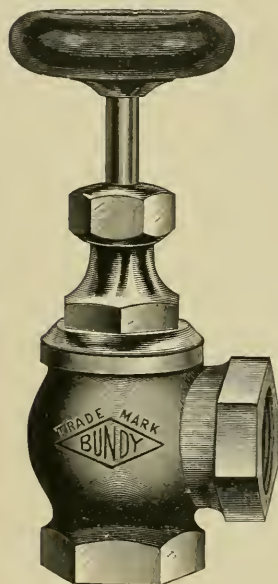

FIG. 89.

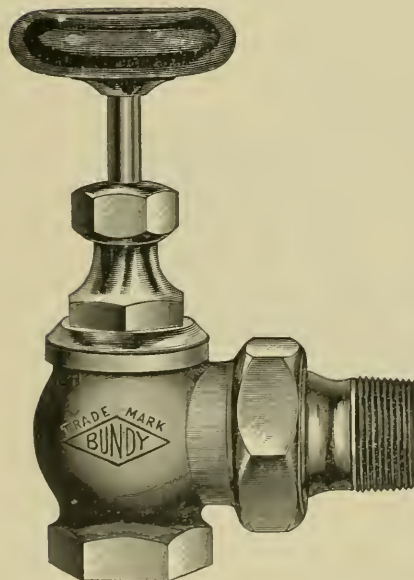

FIG. 90.

Figs. 89 and 90 represent the Bundy Full Opening Improved Radiator Valve. It does not pay to use an inferior valve, for a good one costs but a trifle more and the little difference you may have to pay does not amount to anything compared with the expense and annoyance incident to the use of a poor valve; one that leaks; does not close tightly and gets out of order all the time.

The Bundy Valve is not what is commonly known as a "fighting valve," one made light and cheap to undersell with, but is made as good as is possible to produce them. The metal used is the very best U. S. Government Standard Gun Metal which is the following formula:

Lake Superior Copper.....	88 parts.
Malacca Tin.....	10 parts.
Lead.....	1 part.
Zinc.....	1 part.
	100 parts.

This composition is guaranteed to not steam cut. Many other makers of valves use house scrap consisting of plumber's cocks, old gas fixtures, railroad scrap, lamp tops and a general assortment of accumulated matter found in most dwelling houses. In such scrap more or less iron is always found and the unfortunate thing about it is, that when the valve is made up and nickel plated, the presence of iron and other inferior matter cannot be detected only by the short life of the valve and the continual trouble it gives by getting out of order. The only safe way is to buy a valve that is known to be good and the Bundy answers that description perfectly.

The Bundy Valve has a full opening allowing for the unimpeded passage of water and steam, and will outweigh most any other valve on the market from 8 to 16 oz., which, in valves, represents very nearly 15 per cent. of their value. The valve seat is raised and rounded so no dirt or sediment can lodge thereon or injure it. The stuffing box is extra large allowing for more packing to be used, and as this is where many valves give out, the Bundy Valve should be used for this if for no other reason. The wood wheel handle is larger and a little higher than what is used in the majority of valves so in opening and closing the valve the danger of burning the palm is largely overcome.

ARCHITECTS.

You will serve your interests best by specifying the Bundy Full Opening Improved Radiator Valves, and insisting on having them used. The word BUNDY in a diamond is cast plainly in the globe of every valve, (see cuts).

TRADE BUNDY MARK

AUTOMATIC Air Valves.

THIS Air Valve has but recently been offered to the Trade with the improvements that past experience in practical use for years has suggested.

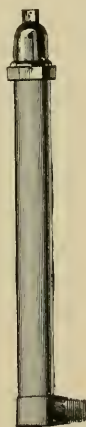

It is very sensitive; is adapted to all kinds of work and is very superior for large Radiators where other air valves fail.

When once adjusted is not liable to get out of order owing to the peculiar construction of seat of valve and cannot be carelessly put out of adjustment. It commends itself therefore to Architects and Steam Fitters, and should be included in all steam-heating specifications.

Bundy Safety Positive Pet Cocks.

Cannot be operated without the key. No child can tamper with it. No more soiled carpets. No more spoiled ceilings. No more damaged furniture.

Thousands of dollars are saved annually in the use of these Safety Pet Cocks, for the ordinary kind are so easily opened by a child or thoughtless person that great damage to property is liable to occur.

KEY.
Fig. 55.

PET COCK.
Fig. 56.

For hot water heating the Bundy Safety Positive Pet Cocks are almost indispensable. They are opened only at long intervals, and it is nice to know that when closed and the key put away they cannot be tampered with. Two nickel-plated keys are furnished with each dozen.

List price \$6.00 per dozen. Extra keys 15 cents each.

PATTERSON'S IMPROVED PET COCK.

Fig. 91.

Can be used for both steam and hot water heating, but is specially designed for steam.

The water formed by the condensation of the steam in a radiator will adhere to the sides of the loops or sections, leaving the center entirely free from it, and it is on this principal that this air valve is made. The conical-shaped point projecting into the clear space exhausts the air from the radiator in a highly satisfactory manner. Then again, the conical-shaped point has a small opening,

which enlarges as it recedes from the point until it becomes full size of the valve opening, thereby reducing the velocity of the escaping air, which is another safeguard against the escape of water.

Fig. 91 represents the air valve screwed into a radiator.

Fig. 92 represents a cross section, giving size and shape of opening.

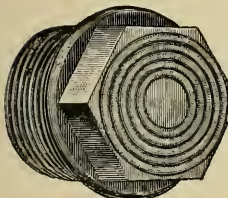

FIG. 46.

ELITE, TRIUMPH AND CLIMAX PLUG.

Fig. 46 represents the Plug used in the Elite, Triumph and Climax Radiators. It is made of cast iron, extra heavy, with carefully cut threads, and is ornamental. All Elite and Triumph Plugs have Right-Hand threads, but half the Climax Plugs have R. H., and half L. H. threads. Unless otherwise ordered R. H. Plugs will always be sent. All plugs have 2" standard pipe threads.

List Price, 30 Cents.

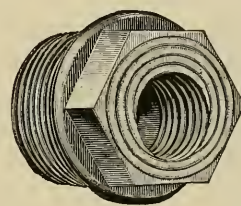

FIG. 58.

ELITE, TRIUMPH AND CLIMAX BUSHING.

Fig. 58 represents the Bushing used in the Elite, Triumph and Climax Radiators. It is made of cast iron, extra heavy, with carefully cut threads, and is ornamental. All Elite and Triumph Bushings have Right-Hand threads entering the Radiator, but half the Climax Bushings have R. H., and half L. H. threads. Unless otherwise ordered R. H. Bushings will always be sent. All bushings have 2" standard pipe threads and reduce, with either R. H. or L. H. threads, to such size as may be specified, but when nothing is stated, one-half will be sent 2"x1", and half 2"x3/4", all R. H. threads. The smaller hole is tapped eccentric, insuring perfect drainage of the Radiator.

List Price, 35 Cents.

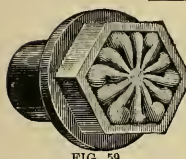

FIG. 59.

ELITE TOP NUT.

Fig. 59 represents the Top Nut used in the Elite Hot Water Radiator. It is made of cast iron, extra heavy, and ornamental, and has carefully cut threads to fit the connecting rod, (Fig. 63), which passes through the Radiator.

List Price, 25 Cents.

FIG. 60.

TRIUMPH TOP NUT.

Fig. 60 represents the Top Nut used in the Triumph Hot Water Radiator. It is made of cast iron, extra heavy, and ornamental, and has carefully cut threads to fit the connecting rod, (Fig. 63), which passes through the Radiator.

List Price, 25 Cents.

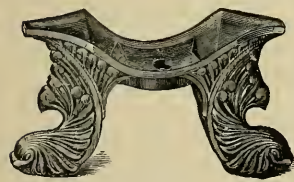

FIG. 61.

ELITE AND TRIUMPH LEG.

Fig. 61 represents the Elite and Triumph Leg. It is made of cast iron, extra heavy, and ornamental, and can be attached to any Elite or Triumph section by use of a Hexagon Head Tap Bolt (Fig. 62).

List Price, 60 Cents.

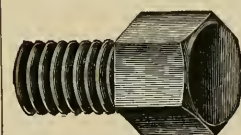

FIG. 62.

HEX. HEAD TAP BOLT FOR ELITE AND TRIUMPH LEG.

Fig. 62 represents the Hexagon Head Tap Bolt used in fastening the Elite and Triumph Legs to the Radiator. They are made of the most refined iron, 1/2 inch diameter, and have carefully cut threads to fit the Radiator.

List Price, 10 Cents.

FIG. 63.

ROD FOR HOT WATER ELITE AND TRIUMPH RADIATORS.

Fig. 63 represents the Rod used in the Hot Water Elite and Triumph Radiators. It is made of the best refined iron, 1/2 inch diameter, and has carefully cut threads to fit the Top Nuts, (Figs. 59 and 60).

List Price, per Section, 5 Cents.

In furnishing Elite and Triumph Radiators in sections, knocked down, ten sections will be considered a Radiator, and if for steam, NINE NIPPLES, TWO LEGS, TWO MACHINE SCREWS, ONE 1" R. H., AND ONE 3/4" R. H., ECCENTRIC BUSHINGS will be sent; if for hot water, NINE NIPPLES, TWO LEGS, TWO MACHINE SCREWS, TWO TOP NUTS, ONE ROD, AND TWO 1 1/4" R. H., ECCENTRIC BUSHINGS will be sent. Additional supplies will be charged for extra.

In furnishing the Climax Radiators in sections, knocked down, six sections will be considered a Radiator, and if for steam, TEN NIPPLES, TWO PLUGS, ONE 1" R. H., AND ONE 3/4" R. H., ECCENTRIC BUSHINGS will be sent; if for hot water, TEN NIPPLES, TWO PLUGS, AND TWO 1 1/4" R. H. ECCENTRIC BUSHINGS will be sent. Additional supplies will be charged for extra.

NOTICE.—All the features in these supplies are fully covered by United States and Canadian patents, and we caution parties not to infringe on our rights.

Bundy Bronze Powder and Bronzing Liquid.

BUNDY BRONZE POWDER.

FIG. 79.

After repeated tests and experiments with all kinds and qualities of Bronze we take pleasure in offering the public our Bundy Bronze Powder, which we guarantee to be the best adapted of any for hot surfaces. All cheap Bronzes, and many of the more expensive brands, tarnish quickly, turning to a dull brass color as soon as heat is applied, but the Bundy Bronzes are manufactured expressly for use on hot Radiators and so retain their lustre perfectly. When a cheap Bronze is used the process of ornamentation requires frequent repetition, engendering loss of time and bronze; in fact the Bundy Bronze, originally applied, cost less and the Radiators always present an elegant appearance. Also, many Bronzes impair considerably a Radiator's efficiency, which is wholly avoided by using the Bundy Bronze. In ordering Radiators we can estimate the quantity of Bronze that will be required to ornament them, and, when requested, will do so, and forward all together, thus saving our customers extra transportation expense and the annoyance of writing a special order.

* SHADES OF BUNDY BRONZE. *

*PALE GOLD.	GOLD COLOR.	*SILVER.	*COPPER.	RICH GOLD.	LEMON.

LIST PRICE.

BUNDY EXTRA QUALITY BRONZE,	\$2.50 per lb.
BUNDY STAR BRONZE (Gold),	1.50 "
BUNDY STAR BRONZE (other than Gold),	2.00 "

All put up in one pound tin cans with full opening top and screw cover, so none is wasted by being blown away or spilled, as is apt to be the case when done up in paper.

LIBERAL DISCOUNT TO THE TRADE.

BUNDY BRONZING LIQUID.

FIG. 84.

FIG. 84 REPRESENTS THE

BUNDY BRONZING LIQUID,

WHICH UNLIKE ALL OTHERS, EMITS LITTLE OR NO ODOR WHEN APPLIED TO A HOT SURFACE, BEING STRICTLY PURE. IT IS AS IMPORTANT TO HAVE A GOOD BRONZING LIQUID AS GOOD BRONZE, AND THERE IS NONE SO PERFECT AS THE BUNDY BRAND.

PUT UP IN

Gallon, Half-Gallon and Quarter-Gallon Cans.

PRICE, 3.00 PER GALLON.

DIRECTIONS FOR APPLYING BUNDY BRONZE.

Place the Radiator, if possible, where it is to remain when bronzed and see that it is free from dust, dirt, oil, rust or any unevenness, which may be removed with a cloth, piece of sand paper, or better still, emery paper or file. If convenient, a good method of removing oil from the Radiator is to admit steam when it will soon evaporate.

When the Radiator is thus prepared, give it a priming or sizing coat of very thin paint made of the best standard grade of white lead and turpentine or naphtha or any other volatile liquid. Mix this to about the consistency of water, and, unless silver bronze is used, stain it with a little yellow ochre. The point is to get as little and not as much paint on the Radiator as possible.

When the priming coat is thoroughly dry, mix the Bundy Bronze with the Bundy Bronzing Liquid in the proportion of about one pint of liquid to one pound of bronze, and apply evenly with a fine camel's hair brush, taking care to brush always in the same direction, either up or down, but never both. If convenient have the Radiator just warm while being bronzed and do not apply so much bronze that it will run. Do not mix more bronze than you will use at one time.

Ordinarily one pound of Bundy Bronze with a pint of Bundy Bronzing Liquid will cover 100 to 200 square feet of surface, but this depends upon the skill with which it is applied.

TO APPLY BRONZE WHEN DRY.

Give the Radiator, when barely warm, a medium thick coat of Bundy Maroon Laquer, and before it gets perfectly dry, apply the Bundy Bronze Powder with a Chamois skin or camel's hair brush. Rub the bronze on evenly making as light a coat as possible.

This method of applying bronze does not seem to give as general satisfaction as that where the Bronzing Liquid is used, as the latter can be successfully applied by a novice.

TRADE BUNDY MARK.

Bundy Enamels Specially Prepared.

We confidently claim for our Specially Prepared Bundy Enamels, qualities of durability and handsome appearance found by experience not possessed by any others. Knowing so well the requirements of such goods we have incessantly striven to secure the standard of excellence which we have now attained, and parties desiring fine finishes for their radiators and pipes, for it is equally well adapted for application on wrought as cast iron surfaces, will do well to specify and use the Bundy Enamels, furnished in the following great varieties :

Bundy Sage,	Bundy Chocolate,	Bundy Gloss Maroon,
Bundy Flesh,	Bundy White,	Bundy Maroon,
Bundy Fawn,	Bundy Blue,	Bundy Slate,
Bundy Terra Cotta,	Bundy Bronze Green,	Bundy Black.

Unlike other paints and enamels, which retard the heating efficiency of the surface to which they are applied, the Bundy Enamels have no effect on the surfaces unless it be to increase their radiating power. This is an important matter, for a finish that reduces the heating power 10 to 25 per cent. would be dear at any cost.

The Bundy Enamels can be used with excellent effect in connection with bronze powder, that is, decorate the body of the radiator with the enamel, touching up the design in bronze. The Bundy Blue Enamel and Bundy Pale Gold Bronze make a beautiful combination, also Terra Cotta and Silver and Chocolate and Rich Gold, and many others.

The enamel comes mixed ready for application, and the quantity required, although depending largely on the skill of the party applying same, is about 1 gallon to 150 square feet of surface, which is a safe basis on which to figure.

In the above list of Bundy Enamels are two maroons—the regular Bundy Maroon Enamel and the Bundy Gloss Maroon Enamel, both of which have that rich color possessed only by maroon paints and enamels, but the latter has a gloss or lustre, being the only enamel possessing that quality, all the other enamels having what is known as a dull, “rubbed down” finish, adopted by most painters for the finest buildings.

The Bundy Enamels are put up in one-gallon, two-gallon or five-gallon cans, and as they do not deteriorate by standing, it is well for all steam and hot water fitters to keep a small supply of same continually on hand.

List Price on all Colors, \$3.00 Per Gallon. Liberal Discount to the Trade.

TRADE BUNDY MARK.

Bundy Patent Adjustable Foot Rest.

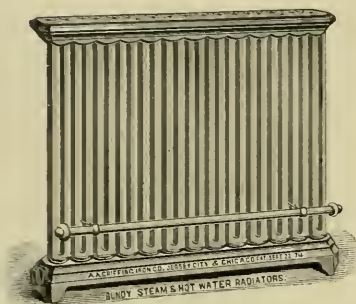

FIG. 88.

FIG. 88 represents **THE BUNDY FOOT REST** which will fit the Bundy Standard, Enlarged or Extended Loops, and can be raised or lowered at will, and can be firmly held at any desired elevation. It is furnished usually in heavy nickel plate, but bronze, copper or silver plate can be had if desired. It can be applied to the Bundy radiator for either Steam or Hot Water, having either one, two, three or four rows of loops, ranging from 3 to 26 loops in length.

PRICE LIST.

Length of Radiator in Loops.	PRICE COMPLETE, in Nickel, Bronze, Brass or Copper Plate.	Length of Radiator in Loops.	PRICE COMPLETE, in Nickel, Bronze, Brass or Copper Plate.	Length of Radiator in Loops.	PRICE COMPLETE, in Nickel, Bronze, Brass or Copper Plate.

FIG. 89.

FIG. 89 represents the cast iron extension piece, two of which when placed on the Bundy Elite Radiator affords a rest for the marble top. Can be put on and removed at will. Unless the Radiator is very long two of these extension pieces are sufficient, but in the case of very long radiators it is well to use three, one in the centre.

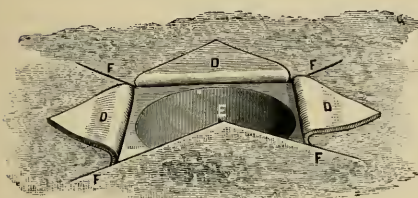

List price 75 cents per pair.

By using the above extension pieces marble tops can be placed on any Elite Radiator at any time, and we give below list prices on some varieties, although as full a variety as is given on pages 118, 119 and 120 can be furnished. These prices are subject to same conditions as to thickness, style of edge, etc., set forth on the above mentioned pages.

Bundy Improved Floor and Ceiling Plates.

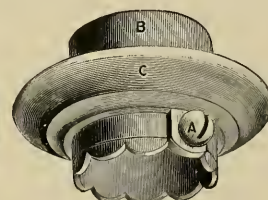

CARPET CUT FOR FLOOR PLATE.

Fig. 1.

FLOOR PLATE.

Fig. 2.

CEILING PLATE

Fig. 3.

The **Bundy Improved Floor and Ceiling Plates** possess advantages strongly commending their use and we solicit your orders.

FIG. 1 shows the carpet cut on the lines (F) exposing to view the hole (E) in which the sleeve (B) of the Floor Plate rests. The carpet points (D) are turned back and lie concealed in the concave part of the Floor Plate. This obviates all damage to the carpets, as the displaced parts perfectly resume their natural position when desired.

The Floor Plate, FIG. 2, is of cast iron and is usually set in one piece, however, when necessary, it can be easily broken by a blow from a hammer, owing to the two slots (A) in its sleeve. When so broken the fracture is irregular and fits so closely as not to be detected, the plate being held firmly in position by plain or nickel plated screws corresponding with its finish. These screws should pass through the holes (C) and lines (F) where the carpet is cut doing it no injury.

The Ceiling Plate, FIG. 3, is also of cast iron and has a set screw (A) which holds it in position. The sleeves (B) in both Ceiling and Floor Plates are of regulation length and thickness and are approved by all Insurance Underwriters.

TRADE BUNDY MARK.

Description of Marble Tops for Bundy Radiators.

In giving a description of these Marble Tops we wish to say a word regarding the difficulties encountered in attempting to convey a correct idea of their appearance. We have given a general idea as to their color, to assist our customers and friends in their selection of appropriate Tops for different rooms, but Marble will frequently, when cut and polished, become darker or lighter than the one from which our description is taken.

We have the finest line of Marble that has ever been produced by any manufacturer, and having made special arrangements for importation, we can furnish at a large saving rare specimens of Marble Tops not obtainable from any other source. We have made our prices low, believing that larger sales will compensate us for so doing.

Please bear in mind that all Marble is not adaptable for Radiators as they will not stand the heat, and this is strong argument why the Tops should come from us, besides thus avoiding any possibility of misfit, which in Marble Tops is especially annoying.

Vermont (A) Milk White. Skirting the western slope of the Green Mountains, in the vicinity of Rutland, Vermont, is found a rare specimen of *milk white* marble interspersed with fine, barely distinguishable, grayish veins and spots. This marble so closely resembles the Italian that only an expert can detect the difference. Both stand the heat well, but the Italian is the harder marble and takes a higher polish and is not so susceptible to discoloration, hence it is better for Radiator Tops, but the Vermont is excellent for bed chambers and rooms of that character.

Italian (B) Blue White. This beautiful *blue white* marble is found in Italy in the well-known Carrara Quarries of sculptural fame. It is unquestionably a better marble than that used by any other house furnishing Marble Tops for Radiators. One block of Carrara Marble may be sent to the sculptor to receive his cunning handwork in the form of some statuette and the next block goes to be wrought into Tops for Bundy Radiators. The classic whiteness of the Italian Marble is its cardinal feature, and its well-known adamantine hardness takes a high polish and makes it less pregame to stains of any description.

Knoxville (C) Pink. At the base of the Cumberland Mountains in Knox County, Tennessee, occupying a large bend in the Tennessee River, is the Great Bend Quarry, which gives us a rare specimen of *pink* colored Marble, thoroughly mixed with fine spots of white crossed with chance veins of the same color or gray, or even both. This is the Knoxville Marble, which is used in all classes of rooms, but more particularly in bed chambers on account of its low prices.

Tennessee (D) Brownish Red. In the northern range of the Cumberland Mountains of Tennessee, is found a Marble of such harmoniously blended colors as to once attract public attention and gain favor. This is the Tennessee Marble. We secure our supply from the well-known Hawkins' Quarry, noted because its Marble has fast colors, unbleachable in the sunlight. This is a very important point to the user. Its predominant color is *red*, and is usually flecked with spots and veins of crystallized white, which, blending with the red, takes on a sort of brownish hue. Perhaps more of the Tennessee Marble is used than any other as it is both cheap and serviceable and takes a very high polish.

Glens Falls (E) Jet Black. One of the grandest Marbles to be found anywhere is the Glens Falls found in the foot hills of the famed Adirondack Mountains. Its color is a *jet black*, resembling very closely the imported Belgium Black, especially when given a French polish. It is an excellent Marble, both for Radiator Tops and Bases, especially the latter, where its dark color gives an appearance of special elegance.

Mexican Onyx (F) Pearl White. This beautiful Marble is purely of a volcanic formation, originating in a violent eruption of the Volcano Popocatepetl, after which the golden quartz, which had been reduced to a white heat, solidified, becoming a semi-transparent mass of rare beauty. Of all the different Onyx that from the Tescal Quarry, situated 35 miles from the City of Mexico, is exported to connoisseurs to be the best, and it certainly is the most richly endowed with natural beauty. Arrangements having been made for the importation of this special Marble, we offer our customers the rarest Mexican Onyx Tops at a comparatively low price. As Onyx is so well known and so highly prized by the public, and as many eminent connoisseurs have passed their favorable verdict on our Onyx, we feel confident in pleasing our customers. The striking ice-like appearance of our Onyx shows the different lines of scintillating colors, which under varying circumstances give forth the prismatic colors of the rainbow. No Marble is better adapted than Onyx to surmount a Bundy Radiator in a Parlor, Drawing or Reception room of Renaissance, Oriental, Arabesque or Moorish style of furnishing.

Ophite (G) Green and White. This Marble is often called Verd-Antique, as its green color gives it an appearance of antiquity. It takes its name from the Latin word *ophites*, meaning a serpent and is found in the renowned quarries of Moriah. It is a serpentine Marble, with its predominant color *dark green* thoroughly mixed with *white*, making it resemble granite in grain. Its mottled design is occasionally varied by a greenish black spot encircled by a zone of darker hue, and the blending of all the colors produces a harmony and unity of design.

Italian Dove (H) Light Blue. Sometimes called *Blue Turquin* owing to its delicate tint of sky blue. It is found in small quantities skirting the Carrara Quarries from which our White Italiano Marble is taken. It has occasional dark blue veins running through the *blue*, which by contrast heightens very much its general appearance. It takes a very high finish and is an excellent Marble for a fine room.

Royal Red (I) Brownish Red. This beautiful Marble is also called Rouge Royal owing to its peculiar fascination with the English Royal Family. When first discovered, it was of absolute control of the quarries and for many years the Marble could not be had by any but the Nobility. Its supply is taken from the Visé Quarries near Brussels, Belgium, which is reputed as having the finest specimens. The Marble has the colors red, brown, drab and white, but the prevailing color which strikes the eye is the *Red*, the color of the English flag.

Aurania Grotto (J) Dark Drab. The Alps of Switzerland and the Pyrenees of France both contain rare specimens of Aurania Grotto, but by far the choicest specimens are from the Aurania Quarries in Switzerland. The word Grotto means mottled, and so the Marble has a great variety of colors, but that which predominates is *dark drab*, which is interspersed with veins of light drab, red, and spots of crystallized white, all of which colors are so harmonious as to render the Marble difficult to describe. It should be seen to be appreciated. There is no color strong enough to become offensive, but blending with the *drab* are the colors red, purple, white, and gray, making a Marble of exquisite beauty.

Eschelon (K) Light Yellow. Fringing the Rhone River in France is found the Eschelon Marble. Its color is lighter yellow than the Sienna, running more into the gray, which assumes such form as to resemble large shells. This Marble is very largely used in the Public Buildings of Paris, and is also extremely popular among the Spanish Nobility.

St. Anne (L) Dark Drab and White. The St. Anne Marble is from the Sambre Quarries, near Liege, Belgium. While all Belgium Marbles are hard, this is the hardest of any, and so is largely used for tiling and flooring purposes in the palaces of foreign countries. Its prevailing colors are *dark drab* and *white*. The drab color, which varies in intensity, is thoroughly intersected by the lines of white. It takes a very high polish and is a magnificent Marble for any apartment, especially a hall or dining room.

Napoleon (M) Dark Fawn. The Napoleon Marble is taken from the Rupel Quarry, near Antwerp, Belgium. Its color is a *dark fawn*, interspersed with crystallized white veins and intersecting light lines of blood red and golden yellow. It is a handsomely colored Marble and having a neutral tint is appropriate with any style of furnishing.

Joinville (N) Gray. The Joinville Marble which is very rarely seen in this country, being found only in very small quantities in the Joinville Quarry of Belgium, is of a light gray color with intersecting lines of red and white. This Marble should be seen to be appreciated. It is hard and susceptible of a very high finish.

Loraine (O) Light Fawn. The Loraine Marble is found in the foothills of the Pyrenees Mountains in Southern France. It has a delicate *light fawn* color, slightly mixed with spots of the neutral pearl and black. As a neutral tint it can be used with good effect in any room, but its mellow color makes it especially desirable for bed-chambers and kindred apartments.

Belgium Black (P) Black. This Marble is found in the Garonne Quarries, in the southern part of Belgium. It has a rich, velvety *black* color, which gives it the appearance of elegance and is a good Marble for either Radiator tops or bases, especially the latter. Its rich color is no doubt largely due to the high polish which it takes.

Griotte (Q) Blood-red. This Marble is found at the base of Mt. Venuvius, near the city of Naples, Italy. As its name implies the Griotte Marble has a mottled appearance. The principal colors are *red* and *black*, while occasionally crystallized white eyes, or veins, may be found running through it. It is one of the handsomest Marbles and takes an extra high polish. The Quarry from which our supply is taken is conceded to be the best in the world.

Numedian (R) Rose. This is probably one of the oldest Marbles known, as history shows that as far back as B. C. 77 the ancient Romans raised a 30 foot column of Numedian to the memory of Cæsar in the Forum. The Marble is secured at great hazard, as to reach the quarries some of Africa's most dangerous jungles must be penetrated, which are infested with wild animals of every description. It is certainly a historic Marble and every Top has a story to tell touching on the adventures encountered in its perilous journey. The Marble has a rich and delicate rose color, made more beautiful, if possible, with resplendent veins of yellow and chance spots and veins of black lined with a rose tint of lighter hue.

Alps Green (S) Dark Green. The frowning peak of Mt. Blanc in the Alps of Switzerland is the source from which our supply of Alps Green is taken. This Marble is sometimes called *Vert Alps* and *Vert Antique* owing to its color and the mountain from which it is cut. It has a *dark green* color uniformly veined with white, and although a very popular Marble in Europe it has not until now been imported into this country to be used as Tops for Bundy Radiators. It is an exceptionally fine Marble for a green room.

Sienna (T) Gold. All the golden sunshine of sunny Italy seems to have entered this beautiful Sienna Marble. Discovered incidentally by the Good Sisters of Sienna, it was used by them in building the celebrated Sienna Cathedral, which, when completed standing in the sunlight resembled a golden palace. The quarries are still controlled by these Good Sisters of Charity and the handsome revenue obtained from the sale of the Marble is wholly used in their humanitarian work. The predominant color is gold with delicate veins of pearl and purple running through it, and even the yellow gold color has different shades to assist the general harmony. This is one of the handsomest Marbles known, and looks well wherever used, especially in a light, sunny room.

St. Beaume (U) Gold and Dove. This Marble is taken from the renowned Tortosa Quarry in the Pyrenees of France. It takes its name from the *Patron Saint Beaume*, which was given it by the people who used it largely in building the Ancient Monasteries and Cathedrals of France, which to-day are standing, living monuments of the enduring properties of this magnificent Marble. It is richly endowed with *gold* and *dove* colors well mixed, with occasional spots of pink and crystallized white, light, and, scarcely noticeable, veins of purple. A Bundy Radiator setting upon a Belgium Black base and surmounted with one of these Tops is well fitted for use in the handsomer rooms in our modern houses.

Famosa (V) Dark Purple. Throughout the Rhenish Provinces in Germany is found the Famosa Marble, but the finest specimens, those having the richest color, are taken from the Eesen Quarry from whence comes our supply. This Marble is used largely in the Palaces of the venerable Kaiser William, hence its popularity throughout all Germany. It is more largely used in the houses of the nobility than any other Marble. It is curiously formed, so much so that it is difficult to describe, but its predominant color is *dark purple* which reminds one of the purple robes worn by the nobility in their regal splendor.

Lavanto (W) Sage Green. Italy is so famous for its fine white Marble that the impression has gone out that it furnishes none other, but situated near the time-honored city of Florence is the Lavanto Quarry producing a most beautiful Marble bearing the same name. The prevailing color is *sage green* largely figured with bright cherry spots and intersecting white veins. It is an excellent Marble, and although very small quantities of it have been imported to this country, it is used very extensively by the Italians and throughout all Europe.

Marble Tops for Bundy Steam or Hot Water Radiators.

These Tops are made of the very best marble; are $\frac{7}{8}$ inch thick; have bevel or O. G. edge, and project over the Radiator binder $\frac{3}{4}$ inch all around. To make sure that you get Tops that fit the Radiator perfectly and to guard against the use of inferior marble, order of us according to this list. The Tops can be sent with the Radiators, thus saving freight, as we keep a general assortment of sizes continually on hand.

Black Glen Falls Tops with a very high polish known as French Polish, add **25** per cent. to above prices.

Cutting Hole in Tops for Column Radiators **\$1.00** net will be charged extra in each case.

Marble Tops, 1 inch thick, add to above prices **15** per cent.; **1 1/4** inches thick, **35** per cent.

Marble Bases, 7/8 inch thick (excepting Onyx), add for 1 row, **35** per cent.; 2 row, **25** per cent.; 3 row, **20** per cent.; 4 Row, Circular, Corner and Column, **15** per cent.

TRADE BUNDY MARK.

Marble Tops for Bundy Steam or Hot Water Radiators.

These Marble Tops are specially designed for *Renaissance, Moorish, Arabesque, Oriental* and *Queen Anne* rooms, and the variety is so great that Tops can be had which harmonize perfectly with the furnishing of any apartment. A full description of each marble is given on another page, and for convenience in ordering, they may be designated by letter: For example "J" would mean "Aurania Griotte," etc. All Tops are $\frac{3}{8}$ inch thick, unless ordered otherwise (see bottom of page): have rounded or chamfered edge; project over the Radiator binder $\frac{3}{4}$ inch all around; fit the Radiator perfectly, and the Marble is of the very best quality, all of which should be convincing arguments why the tops should come from us, thus avoiding all danger of misfits, besides procuring, at a moderate cost, specimens of Marble which are extremely rare.

Cutting Hole in Tops for Column Radiators \$1.00 net will be charged extra in each case.

Marble Tops, 1 inch thick, add to above prices 15 per cent.; 1 1/4 inches thick, 35 per cent.

Marble Bases, 7-8 inch thick (excepting Onyx), add for 1 row, 35 per cent.; 2 row, 25 per cent.; 3 row, 20 per cent.
4 Row, Circular, Corner and Column, 15 per cent.

TRADE BUNDY MARK.

ENGINEERING OFFICE OF CHARLES E. EMERY,

No. 22 Cortlandt Street, New York, Dec. 19, 1888.

A. A. GRIFFING IRON Co., Jersey City, N. J.

Gentlemen :—Agreeable to your request I have made a series of tests under similar conditions of different sized Bundy Radiators manufactured by you, and of a number of Radiators manufactured by other parties, in which vertical iron pipes one inch in diameter are screwed in a base to which the steam and return connections are made. As a general result of the tests it may be stated that *I find that the Bundy Radiators circulate more quickly* than any form of Radiator constructed of one inch pipes arranged vertically, even though the same be connected at the top with return bends, and that *this difference is very marked* when comparison is made with that form of Radiator in which the one inch tubes are closed at the top and circulation secured merely by interior diaphragms. The superiority arises evidently from the larger passages provided in the Bundy Loop and the adaptation of the base to the same so as to secure prompt and efficient action. On turning steam on a Bundy Radiator, which has become cold and filled with air, *the loops successively fill from the end where steam is supplied*, to the other, whereas with the Radiator constructed of one inch pipes there appears to be no regularity in heating up, and much more time is required. This is particularly the case with those constructed with pipes closed at their upper ends, and it is not uncommon for several of these to remain cold until heated by the surrounding pipes, and one or two near the steam inlet may thus be cold for a considerable time after the tubes at the other end of the Radiator have become thoroughly heated. *All these points have an important bearing on Radiators for use in dwellings or elsewhere where the pressure is very low*, in fact sometimes below the atmosphere, so that air entering through the slightest leaks, or derived from the water in the boiler, stops the circulation in a portion of the heating surface, and an irregular effect is produced. It has still a more important bearing on the use of direct Radiators when the supply of steam to the same is electrically controlled. With such apparatus it is necessary that the steam circulate promptly when it is turned on, as the mean temperature can only be maintained by shutting off and turning on the steam at short intervals.

The second question that arises is as to the efficiency of a given amount of surface in Radiators of different kinds after circulation is fully established. It is customary to make these tests by comparing the amounts of water condensed under similar conditions, and this plan was adopted in this case, unusual care being taken to make the results strictly comparative as is shown hereafter.

When steam, circulating freely, imparts heat through one side of the plate, the amount of condensation which will take place and the quantity of heat imparted will depend upon the degree and time of exposure of the other side of plate to heat absorbing substances, such as fixed bodies receiving heat by radiation or currents of air receiving heat principally by direct contact, and to but a limited extent by radiation.

TRADE BUNDY MARK.

With indirect radiation, the condensation, other things being equal, is chiefly influenced by the quantity of air circulated over the surface. With ordinary Radiators the circulation is only that produced by difference in temperature. The heating surface of a direct Radiator can be divided in two kinds, viz: 1—*The direct surface*, or that on the outside of the Radiator considered as a whole, which therefore radiates directly into the surrounding space, and is also in contact with currents of air of large volume, and—2—*The “masked” surface*, or that on the sides of the several tubes which are turned toward each other so that the heat is radiated back and forth from one tube to another, and only that transmitted which can be absorbed by direct contact with, and a slight radiation to currents of air of limited area passing upward between the tubes. It will be seen therefore that the “direct” surfaces are very much more efficient than the “masked” surfaces, and that that Radiator with a given amount of heating surface will be most efficient which has the least “masked” surface compared to its outer bounding or “direct” surface. *For this reason, any Radiator, made up of a single row of pipes or loops of any shape is more efficient for a given surface than one with more than one row*, and the loss of efficiency increases with the number of rows as more and more of the surface is “masked” and become relatively less efficient.

I find that your competitors have taken advantage of this state of facts and published results in which a favorable form of Radiators of their manufacture was compared with a less favorable form of your manufacture, thereby showing your type of Radiator to be inferior, and it is interesting to state that I have found, upon reversing the conditions and selecting a favorable form of Radiator of your manufacture and comparing the same with a less favorable form of their manufacture, *that I obtained results showing your opponents’ Radiators very much inferior to yours*. This state of facts will astonish those who have hitherto supposed that differences in result can only be due to the type of Radiator, as the fact that they can be secured by a mere selection of Radiators of the same type containing the same heating surface is not generally known.

Again, in the experiments of one of your opponents, the steam and water connections of the Bundy Radiator were in the same end of the base. It is practically known that a very great difference may be secured in the performance of different Radiators by the way they are graded. In a strictly comparative test the water of condensation should trickle along the bottom of the base from the receiving end to the return end without chance of accumulation. With both connections in the same end of the base, or a base improperly graded, the water may be backed up and discharged intermittently, thereby not only interfering with the regular measurement but preventing the full efficiency of the surface by having a portion of the base covered with water for the whole or a portion of the time, even though the action may not be sufficient to cause interference in the circulation in the tubes.

In the tests made by your opponents, a long, thin Radiator of their own manufacture, was placed along side and relatively near a short, thick Bundy Radiator. It is evident, therefore, that one Radiator partially “masked” the other in the same way that one tube “masks” another, as above explained, on which basis their long Radiator reduced the efficiency of the whole of one side of your short one, while yours on the other hand could

TRADE BUNDY MARK.

only reduce the efficiency of a part of the length of theirs. By simply reversing the conditions and comparing a Radiator of your manufacture with a return bend Radiator made by your opponents, commercially rated and of almost identically the same actual surface, the experiments showed conclusively a superiority of the Bundy Radiator of 19.17 per cent, when the surfaces were left in the condition they were furnished by the manufacturer, even when the masking of one by the other was prevented by separating the competing Radiators a considerable distance and placing a screen between them. This superiority was reduced 5.7 per cent. when the surfaces were thoroughly covered with thick paint, but with this allowance the Bundy Radiator was still very greatly superior.

It will be observed, also, that the Bundy form of Radiator would suffer less in the natural process of selection than any form of Radiator made up of vertical one inch tubes. Radiators, particularly in small rooms, are necessarily selected to approximately fit a particular place, and therefore those of substantially the same length and height would be used independent of type, and since each of your tubes contains three square feet of surface, and each inch pipe only one square foot, it is evident that in such process of selection, even by parties who did not know the advantage of so doing, your one-row Radiator would be selected, where two or three rows of inch pipe would be required, and your two-row where from four to six rows of inch pipe would be needed to keep within the same length, so that on the average a superior form of your Radiator would be used more often than when the Radiator was made up of small tubes.

There were upwards of two hundred tests made for your information on the general subject by the writer, with the assistance of Mr. H. W. York. The results will be found of great value in suggesting still further improvements in your already excellent designs and proportions, but involved such a mass of detail that it would be difficult to properly edit and publish them in such form as to be useful to the trade. It will, however, be seen that independent of the efficiency of the radiating surface above explained, the Bundy Radiator is superior to the others tested in freedom of circulation, and in the relative amount of direct or effective heating surface, compared with that which is masked or ineffective.

In connection with the experiments, I have carefully measured the radiating surface of two five-loop Bundy Radiators, with the following results:

Total radiating surface with "Standard" loops,	-	-	15.11 square feet.
Total radiating surface with "Enlarged" loops,	-	-	17.99 square feet.

[SIGNED]

CHARLES E. EMERY.

SUMMARY OF CHARLES E. EMERY'S REPORT.

NOTE:—For the benefit of those who feel that they cannot spare the time to read the above report, although we believe it will pay any one to do so, we sum up the entire matter briefly in the following:

CHAS. E. EMERY, M. E., after making 200 competitive tests, using the Bundy with every other type of Radiator manufactured, finds an average superiority for the Bundy of 19.17 per cent.

Also, that the tests made by our competitors who have used a favorite form of their Radiator and a less favorable form of Bundy, have no significance whatever, unless it be a flattering admission of the Bundy's superiority signified by their underhanded attempt to mislead the public.

Also, that after measuring carefully the surface of the Bundy Radiators, he reports that they are actually in excess of what we claim for them, in one case .11 square feet, and another .49 square feet.

TRADE BUNDY MARK.

OFFICE, NEW PENSION BUILDING,

1316 N. St., N. W.

GEN. M. C. MEIGS, U. S. A.

A. A. GRIFFING IRON CO.,

Jersey City, N. J.

Washington, D. C., April 2nd, 1886.

Gentlemen:—I have duly received a copy of the Illustrated Catalogue of the Bundy Steam Radiator made by your company.

I know of no better steam heater. I first made its acquaintance on a large scale in the erection of the National Museum in this city, where it is used to heat a building of 328 feet square, containing about 3,000,000 cubic feet of space. I was so well satisfied with its work in that building that I specified it in contracting for the heating of the New Pension Building, also in Washington.

I have heated this building containing *6,179,200 cubic feet of air space*, exclusive of cellars, in a building of 3 stories covering a ground plan of 400x200 feet and 150 feet to the ridge of its central roof, since the first of March, 1885. The ratios are for the north rooms 1 sq. foot of Radiator surface to 111 cubic feet of air space. In the south rooms, 1 to 135; in the east and west rooms, 1 to 123, and for the great hall which these rooms surround and enclose to the height of 80 feet, and which itself *contains over 4,000,000 cubic feet of space* only, 1 sq. foot of radiating surface to 777 cubic feet of air space. The building is daily occupied by about 1,600 persons engaged in sedentary employment, and though the thermometer out of doors during the past winter has been frequently much below zero, *no one has complained of being insufficiently warmed, either in room or hall.* A better test of the value and efficiency of a Radiator can scarcely be looked for.

Yours respectfully,

M. C. MEIGS,

Quartermaster General (retired).
Brevet Major General, U. S. A., and
Architect New Pension Building.

CEN. M. C. MEIGS' EXPERIENCE WITH THE BUNDY RADIATOR.

NOTE:—*The above letter shows results with the Bundy Radiator which have never been even approached by any other.* In a word it means that the immense New Pension Building at Washington, which has a maximum of glass surface, is satisfactorily warmed by the Bundy Radiator on the following adjustments:

In the North Rooms,	1	square feet Heating Surface to 111 cubic feet Air Space.
" " South Rooms,	1	" " " " " 135 " " " "
" " East and West Rooms,	1	" " " " " 123 " " " "
" " Great Hall,	1	" " " " " 777 " " " "

BEING AN AVERAGE ADJUSTMENT FOR THE ENTIRE BUILDING OF

1 SQUARE FOOT BUNDY HEATING SURFACE TO 275 CUBIC FEET AIR SPACE,

which is undisputable proof that the Bundy Radiator is the most powerful heater on the market, and that less of its surface can be used and precisely the same results obtained, or with the same amount of surface the apparatus will always work easier, be more economical, consume less fuel and require less attention.

INTRODUCTORY

OCT 7 1949

OF

U S PATENT OFFICE

REFERENCES AND ADVERTISEMENTS.

THE following pages we have devoted to references, testimonial letters and advertisements :

The references comprise a list of about twenty-five thousand names of parties who are using the Bundy Radiator. We could not get the names of them all, but have enough to show the world wide adoption of the goods, and if you will take the time to write a few of the parties, they will say whether they have given satisfaction or not.

The testimonial letters have been selected from among thousands of others which we have on our files. Every incoming mail brings more of them. With over thirty million feet of surface now in use, all of which is giving the best of satisfaction, it is not surprising that they keep coming in. Use the goods yourself and you will want to add yours to them.

A word regarding our advertisements may not be out of place. They have been selected with great care, and the concerns they represent are making goods that can be depended on, and we ask our friends and patrons to favor these parties with their orders when it is a possible thing.

Thanking you heartily for past favors and soliciting a continuance of your esteemed patronage, we remain,

Very respectfully yours,

A. A. GRIFFING IRON CO.

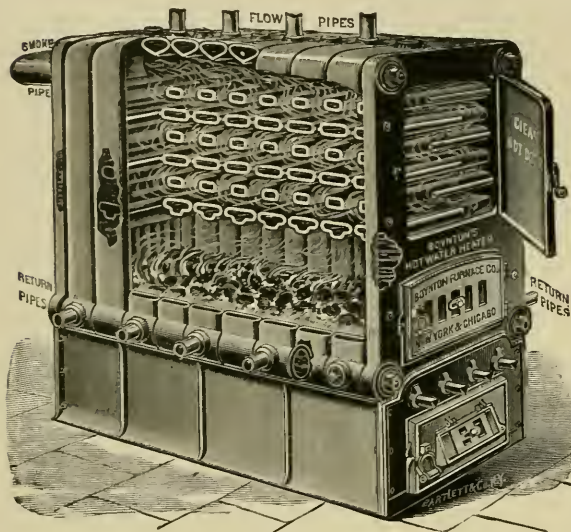

Jersey City, N. J.

67132

THE BOYNTON HOT WATER HOUSE WARMING HEATER

For Private Residences, Schools, Churches, Public Institutions, Greenhouses, Etc.

PATENTED AUGUST 6TH, 1889.

(Sectional view of Size No. 9.)

FOR HARD OR SOFT COAL, WOOD OR NATURAL GAS.

TWELVE SIZES
NO BRICK WORK REQUIRED.

No. of Heater	Height of Heater.	Size of Grate.	Square Feet of Fire Surface in Heater.	Square feet of Direct Radiation Heater will carry	Cubic Feet of Space Heater will heat Direct Radiation.	Diameter of Smoke Stack.
No. 1	52 inches.	17½ x 15	29	250	7,500	8 inches.
" 2	52 "	17½ x 20	38	400	12,000	8 "
" 3	52 "	17½ x 25	47	600	18,000	8 "

" 12	113 "	21 x 55	170	3,100	100,000	10 "

Flow and return outlets are tapped for two-inch pipe and three-inch order.

Deduct 25 per cent. from radiation, to allow for flow and return pipes.

For indirect radiation add fifty per cent. to Radiation and Boiler Power.

A covering of asbestos mortar on the sides and top of heater will insure greater economy in fuel.

For anthracite coal use Lehigh small egg size.

Send for Illustrated Pamphlet and Prices.

ESTABLISHED 1849.

MANUFACTURED ONLY BY

INCORPORATED 1884.

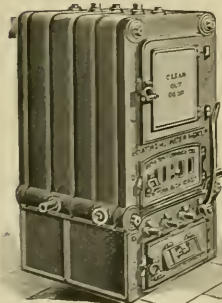

THE BOYNTON FURNACE CO.,

207 and 209 WATER STREET,

47 and 49 DEARBORN STREET,

NEW YORK.

CHICAGO.

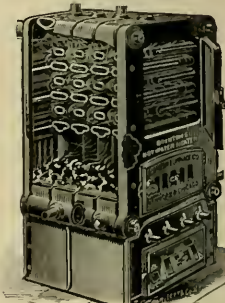

Size No. 4.

These Heaters have been pronounced by scientific experts to be the most effective, economical and of the best mechanical construction of any on the market.

These Heaters are operating in a most successful manner in many Residences, Schools, Apartment Houses and Greenhouses.

On account of the dissolution of the old firm in 1882, which was established in 1849, Boynton's Celebrated Furnaces, Hot Water Heaters, Ranges and Baltimore Heaters, with latest improvements are now manufactured exclusively by

THE BOYNTON FURNACE COMPANY.

BRASS FOUNDERS,

—AND—

METAL DEALERS.

SPECIALTIES.

WILLIAMS * LION * BRAND * PHOSPHOR * BRONZE,

In Ingot and Castings.

Adopted and endorsed by Pennsylvania R. R. and Fullman Co.'s and other leading companies and manufacturers.

WILLIAMS ALUMINUM BRONZE.

Tensile Strength between 70,000 and 80,000 lbs. per square inch.

Its high qualities render its use particularly advisable for Ship Propellers, Pistons, Cylinders, Cog Wheels, Hydraulic and other Machinery, where great strength, resistance to wear and oxidation are requisite.

FERRO ALUMINUM FOR IRON FOUNDERS' USE

Results.—Makes Iron melt faster, run fluid, less shrinkage, will soften hard iron. Where it is utilized the Founder has castings free from hard spots and blow holes, can use more scrap and lower grade iron with less percentage of bad castings, and increases tensile strength 20 to 25 per cent.

INGOT METALS FOR BRASS FOUNDERS.

We carry large stock of Ingot Phosphor Bronze, Manganese Bronze, Aluminum Bronze, Gun Metal, Brass, Composition, Carbon Bronze, also Castings of above metals, Special Castings for Electrical Work in Tin, Copper, Lead, Aluminum, Zinc.

❖ FERGUSON · BOILER ❖

FOR STEAM OR HOT WATER HEATING.

Made in Six Sizes; Heating from 13,000 Cubic Feet to 100,000 Cubic Feet.

This Boiler has a Positive and Rapid Circulation of the Water Throughout all its Parts.

STATE CAPITOL, ALBANY, Feb. 5, 1888.

TO THE FERGUSON BOILER COMPANY,

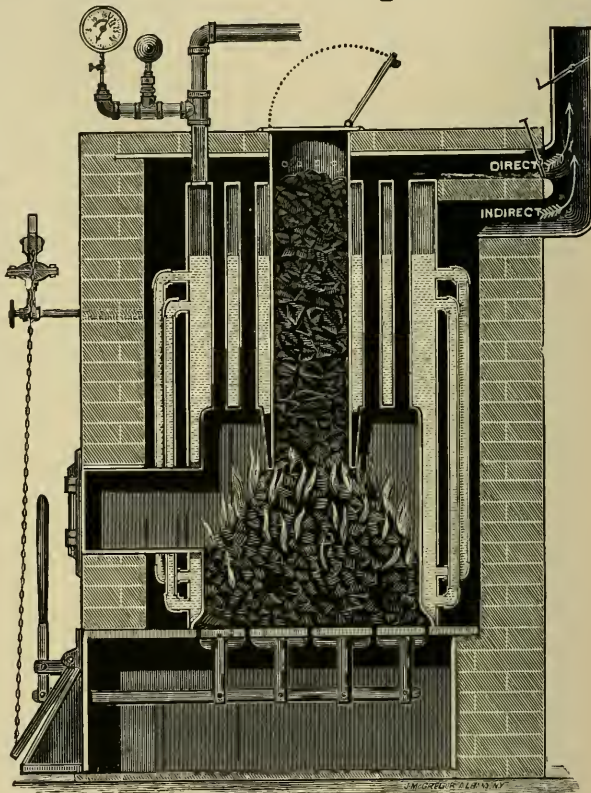

Gentlemen:

I have examined your boiler in its construction and operation, and am of the opinion that you have a first-class boiler for *steam or hot water heating*, and one that will be very highly appreciated when given trial. In its construction it is strong and durable, easy to clean and repair, automatic in its operation, occupying very little space in its position, *and a very extraordinary steaming capacity*, which I can only account for in the circulating pipes running from top to bottom of boiler on outside of shell, thereby producing a constant and rapid circulation and mixture of water of different temperatures in boiler, and a constant change of water in contact with heating surface; *a condition* well known to steam users as necessary for quick and economical production of steam; also in the additional heating surface in circulating tubes, and position of same in the escaping gases to chimney, which would be lost in other types of boilers.

Yours truly,

WILLIAM J. NORWOOD,

Chief Engineer.

WE would call the attention of the public to our new boiler, (patented February 1, 1887,) and to its principal point, the *outside circulating pipes* which are located on the outside of the shell, and inside the return flue. By means of these pipes the water in the boiler is kept constantly in rapid and positive circulation over the heated portions, thereby the more rapidly absorbing the heat; generating the steam more rapidly and steadily with a great saving in fuel and attention.

They are built of the best *steel*, in the best manner, having coal-magazine entirely surrounded by water, which keeps the coal at a low temperature. Milling and anti-clinker grates, automatic dampers for regulating pressure of steam and controlling draughts; also all appliances necessary to the best working of the boilers.

By filling the coal-magazine, shaking the grate, taking up the ashes once a day, there is little else to do.

We claim that our boiler requires less attention than the ordinary parlor stove, and will use less fuel to heat the same amount of space, saving all the annoyances of dust, ashes and gas.

THE BUTTON HOUSE HEATING BOILER. BUNDY LOOP

Patented August 8, 1888.

OTHER PATENTS PENDING AND ALLOWED.

Side View.

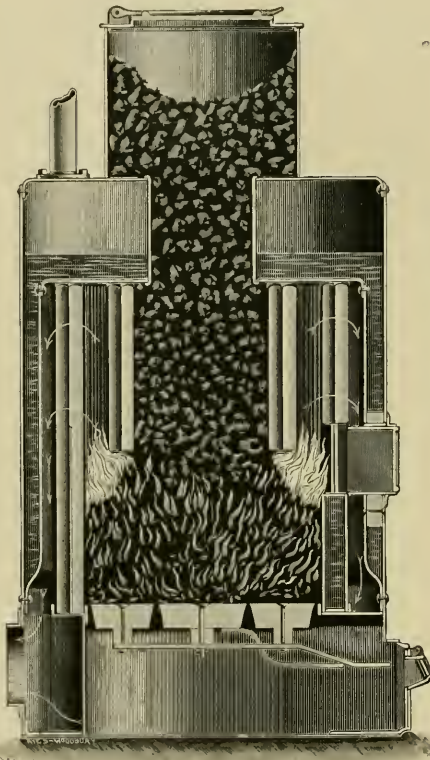

THESE CUTS SHOW

the construction of the

BUTTON BOILER.

An outer water jacket or water leg, a fire pot formed of Bundy Loops and a magazine similarly formed. All combine to make the water absorb all the heat from the fire.

The low temperature of the smoke pipe proves this.

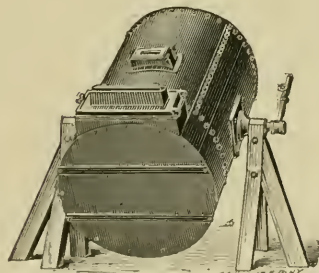

Sectional View—from Front to Rear.

FOR STEAM OR HOT WATER.

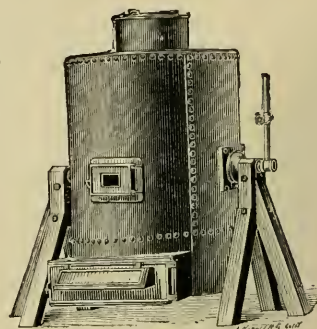

NO BOILER WILL GIVE SATISFACTION UNLESS CLEAN. NO BOILER MADE CAN BE AS THOROUGHLY CLEANED AS THIS. OR AS EASILY, OR AS QUICKLY.

BUTTON BOILER CO.,

WATERFORD, N. Y.

Boiler being tipped up preparatory to cleaning.

Front View without Trimmings.

AN EXPERIENCE

—IN—

HEATING.

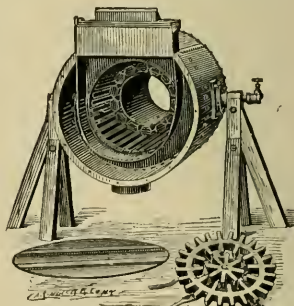

About five years ago a well-known manufacturer selected a house-heating boiler of approved design and placed it in his house. Result, as follows: First winter—entire satisfaction. Second winter—tolerable satisfaction. Third winter—no satisfaction. Fourth winter—dissatisfaction. Fifth Winter—a change decided upon. Now he sets a boiler which is always accessible, always easily cleaned. His trouble arose from two causes—the impossibility of thoroughly cleaning his old boiler, and the difficulty in repairing it when necessary. In nine boilers out of ten there are many places which you cannot clean.

He now chooses a **BUTTON BOILER**. Each year's accumulation of soot, dirt, etc., can be perfectly removed from this in one-half day. If you have one of the 50,000 inaccessible boilers in use, change it. Get a **BUTTON**, which is efficient, durable, economical; has 40 square feet of fire surface, to 1 square foot of grate. You can clean it as thoroughly as you can a lamp chimney. It is vertical when in use, horizontal when being cleaned.

Send for circulars.

Address **BUTTON BOILER CO.,**

Waterford, N. Y.

Boiler tipped up, bottom off and grate out, in position for cleaning.

"PERFECT" HOT WATER HEATER.

(Trade Mark.)

TWELVE SIZES.
ADAPTED TO HARD OR SOFT COAL.

ABSOLUTELY SAFE AND FREE FROM NOISE.
Easy to Manage as an Ordinary Heating Stove.

The Celebrated "Perfect" Hot Water Heaters are the most powerful, economical and the only positive circulating Heaters ever made. They present $2\frac{1}{2}$ times more surface exposed to the direct action of the fire than any other heater of equal diameter; 85 per cent being fire surface and only 15 per cent flue surface. Flue surface is of little value in Hot Water Heaters. All the water passes twice around the fire and five times over it, absorbing heat all the way up. There is four inches of brick above the grate which allows the coal to become thoroughly ignited before coming in contact with the water sections, the result is a bright, clean fire over the whole surface. Fitted with "PERFECT" triangular grates. Absolutely water-tight and gas-tight. Universally successful. Heating where others fail.

A WONDERFUL BOILER

"PERFECT" HOT WATER HEATER.

(Trade Mark.)

FURMAN BOILERS

FOR HOT WATER OR STEAM HEATING,

Have a high reputation for Stauchness, Durability and Safety, and are GREAT COAL SAVERS. They embody every improvement that study and capital can suggest and secure, and are models of inventive and mechanical skill.

Every Architect and Steam Fitter not familiar with our Boilers should send for a copy of our 150 page illustrated manual on Modern Heating and Ventilation, with tables and correct plans for Hot Water Work.

THE DUNNING PATENT WROUGHT IRON BOILER,

WITH SELF-FEEDING MAGAZINE.

IT IS THE
OLDEST AND BEST

Steam or Hot Water Heating Boiler Made,
AND INSURES A WARM HOUSE
NIGHT AND DAY.

Perfectly free from Carbonic Acid Gas, Smoke or Inhalable Ash
Dust. An automatic, noiseless and easily managed Heating
Apparatus, requiring attention but once in
Twenty-four hours.

MADE IN ELEVEN SIZES,
SUITABLE TO HEAT FROM THE
SMALLEST COTTAGE

TO THE
LARGEST BUSINESS BLOCK,
AND IN 4 PATTERNS AS FOLLOWS, VIZ:

- As a MAGAZINE BOILER, which requires attention but once in 24 hours.
- As a SURFACE BURNER, to burn hard or soft coal, wood, coke, oil or gas.
- As a HOT-WATER BOILER, for greenhouses and hot-water heating.
- As a PORTABLE BOILER, to be set without brick-work.

The above Boilers are made in TWO SECTIONS, when desired, so that they can be taken in through small door or window, where whole one cannot enter.

THIS CUT REPRESENTS A NEW
ROCKING AND DUMPING GRATE,

Which are now being furnished with all sizes of the

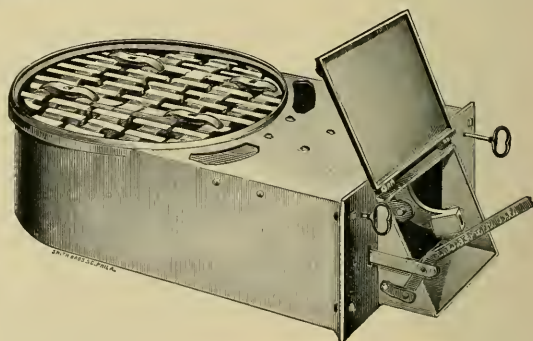

DUNNING BOILER,

And is pronounced by all who have used it to be the most

PERFECT GRATE YET INVENTED,

As it shakes the fire over the entire surface, grinds up all clinkers that may form and prevents the accumulation of ashes around the fire pot.

The grate is simple in construction, and should any part give out it can be very easily replaced by any one.

THE RICHARDSON & MORGAN CO.

92 BEEKMAN ST., NEW YORK.

IMPROVED COMBINATION BOILER

Brick Set or Portable

... FOR ...

Hot Water or Steam
Heating Plants.

FLUES CAPACIOUS,
 FIRE - BOX AMPLE,
 SUPERIOR FEATURES,
 LARGE HEATING SURFACE
 AND
 SPLENDID SELLING POINTS.

PORTABLE FORM. (10 Sections, with Cast Base.)

TO THE TRADE:

The power of these boilers is increased or diminished by addition or subtraction of Middle Sections and grates.
 The dealer, by carrying one sample only, is enabled to demonstrate the different modes of heating, and to show different capacities, without being compelled to carry in stock different patterns and different sizes of boilers.
 Send for our Catalogue, giving reliable results from a series of carefully conducted scientific tests, made to demonstrate the actual heat generating power and fuel economy of these boilers.

THE BRONSON

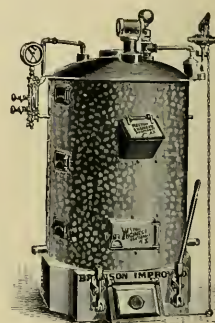

WATER TUBE BOILER

—FOR—

Steam or Hot Water Heating.

ECONOMICAL - AUTOMATIC - GUARANTEED

IMPROVED GRATES.

All Styles of Boilers Furnished with Back Outlet for Smoke.

MADE SURFACE BURNERS FOR SOFT COAL.

Results always Satisfactory.

The **Bronson Steam and Hot Water Heater** is an improved form of water-tube boiler every part of which is fire surface of the highest efficiency. It is made principally of the best steel tubing, manufactured expressly for the purpose. Referring to the cuts it will be seen that these tubes are connected with each other by three sections—the bottom or fire-pot ring—the middle ring, the central aperture of which forms the lower end of the coal magazine, and the upper section, or steam dome. These are all connected together with steel tubes, the joints being of a peculiar nature, precluding the possibility of leakage and binding all parts of the boiler into practically one piece of metal.

There is a much larger proportion of heating surface to the grate surface in this boiler than any other—in itself a long step toward economy, as the prominent defect in most heaters is having large grates and small heating surface.

The heating surface in most boilers is also very inefficient, due to poor design, bad circulation, and the difficulty of keeping the heating surface clean. In the BRONSON all the heating surface is of the highest efficiency, is vertical and readily accessible, thus providing for keeping a clean boiler with the least possible trouble.

The hot gases of combustion leaving the fire pass outwardly between a double row of tubes, then passing upward are deflected to the centre of the boiler, crossing all of the tubes, again deflected to the outside, then cross the tubes the third time, and finally pass around and over the steam dome before finding their way out.

This peculiar arrangement of vertical water tubes and horizontal deflections provides at once for the most perfect circulation possible, and for the absorption of heat in the gases—a point seldom before realized, but which must be obtained before a boiler can make the slightest pretense toward economy.

Modern House Heating

Is the title of a book of useful information for anyone
 considering the subject of

Steam or Hot Water Heating

MAILED FREE.

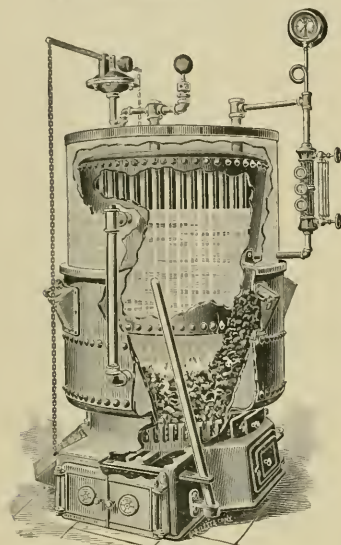

WRITE FOR IT AND INVESTIGATE FOR YOURSELF.

GORTON & LIDGERWOOD COMPANY,

NEW YORK, 96 Liberty Street.

CHICAGO, 34 and 36 West Monroe Street.

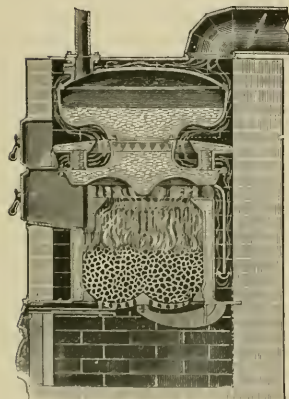

BOSTON, 201 and 203 Congress Street.

PERFECT COMBUSTION.

THE "ALL RIGHT"

A BRICK SET STEAM BOILER, MADE IN FOUR SIZES.

THIS BOILER HAS BEEN IN USE FOR THE LAST
 FIVE YEARS AND HAS GIVEN UNIVERSAL
 SATISFACTION—SEVERAL HUN-
 DRED ARE NOW IN USE.

THE VOLUNTEER

A PORTABLE STEAM BOILER.

Something entirely new—the twenty-five Boilers on
 trial last season gave the best results. Three sizes
 now ready—others in preparation.

EAST PROVIDENCE, R. I., January 24th, 1890.

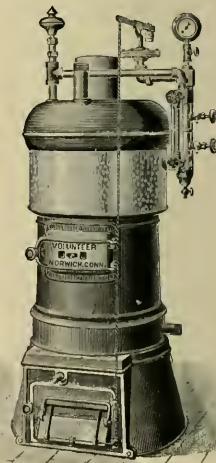

PROVIDENCE STEAM HEATING COMPANY.

GENTS—I had the "Volunteer" No. 2 put into my house last fall and
 can truly say that I am more than satisfied with its heating qualities. I
 heat six rooms, two halls and bath room, and average in coldest weather
 about 1,500 lbs. of coal per month, which I consider very economical
 Those who have seen it pronounce it the best little heater they ever saw.
 Respectfully yours, R. G. MESSINGER.

FOR STEAM OR HOT WATER.

ADVANTAGES:

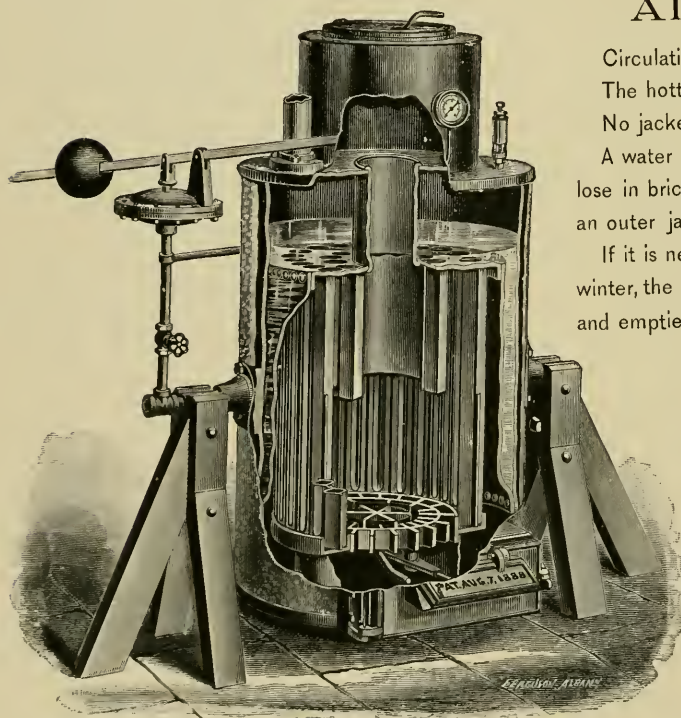

Circulation Vertical.

The hottest gases not drawn off to chimney.

No jacket "hissing hot," as some are.

A water jacket, or leg, catches what heat some lose in brick work and what others lose through an outer jacket.

If it is necessary to leave a house through the winter, the boiler can be disconnected, tipped up and emptied in an hour.

VIEW SHOWING INTERIOR OF BOILER.

IT IS
NOT AS CHEAP

AS SOME BOILERS,

So if you are to decide what to buy by the price ONLY, don't write to us BUT, if you want to get full value for your money, and perfect satisfaction in your heating plant, send for our circular.

BUTTON · BOILER · CO. WATERFORD, N. Y.

THE EUREKA STEAM HEATING CO., ROCHESTER, N. Y.,

MANUFACTURERS OF

THE PLAXTON HOT WATER HEATER.

THE PLAXTON consists of pairs of sections, and a back and front, all water spaces, securely bolted together at top and bottom.

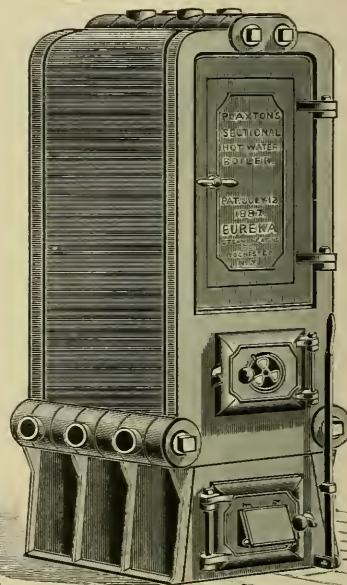

THE BOLTS pass through the water spaces, and any difference between the expansion of the bolts and the sections is taken up by the rubber or asbestos gaskets forming the water joint.

THE PECULIAR shape of the sections permits expansion and contraction without danger of fracture.

EACH SECTION forms its portion of Fire Pot, Smoke Flue and Grate Surface.

THE JOINTS are milled perfectly true and are packed with a gasket made expressly for this purpose. These joints never leak.

They are made in three different heights, namely, 48, 56 and 68 inches, and 12 sizes. For work needing larger sizes than are shown in Catalogue, we furnish Twin Heaters.

THE CONSTRUCTION of the Heater gives an immense heating surface. HEAT AND WATER travel thirteen feet from grate to outlet, and both move in the same direction, thus avoiding all cross currents and making positive circulation, which cannot be impeded by forcing.

EASILY CLEANED, as upon opening the fire door, all fire surfaces can be seen and reached.

THE AMOUNT OF WATER CARRIED in each Heater is accurately adjusted to the radiating surface to be supplied.

It has relatively greater surface in fire box and crown sheet than has any other Heater. The proportion of grate surface and fire surface to our standard rating is the same for all sizes.

ALL EXPOSED PARTS of Heater except doors are water spaces.

THE ROCKING GRATE is equally well adapted for burning hard or soft coal, or wood. WRITE FOR CATALOGUE A. A.

RICHMOND'S Victor Hot Water Heater. BRICK SET.

Has been thoroughly tested and receives the commendation of the best engineers.

WHAT THEY SAY.

"Absolutely the best Hot Water Heater extant."

"I have given much thought, and had large experience in Hot Water Heating, having set many of the popular heaters. The Victor beats them all. Its system of flues and water ways are such as to insure the greatest possible utilization of the fuel. Economy and efficiency in use are its claims, and it merits them."

RICHMOND'S

VICTOR STEAM HEATER.

BRICK SET AND PORTABLE.

SEVEN YEARS RECORD OF SUCCESS.

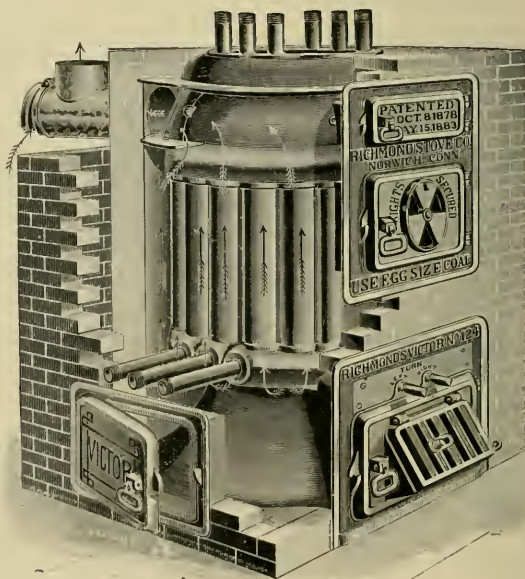

WHAT ENGINEERS AND DEALERS SAY.

"We have up to this time set over fifty Victors, and have had better success with them than with any Steam Heater we ever handled."

"We offer the Victor to our best friends and customers, and look for no complaints or after clap when once properly set."

"Our experience in setting and observations of Richmond's Victor confirms the wisdom of our election in recommending it to our clients."

THE RICHMOND STOVE COMPANY, NORWICH CONN.

THE "GIANT" METAL SASH CHAIN

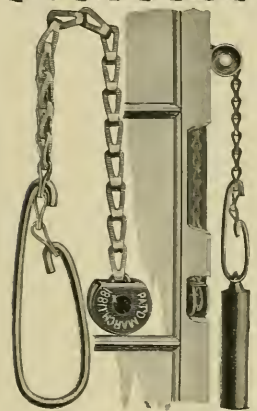

Thoroughly Reliable and an Economical Substitute for CORD for Hanging Weights to Windows.

MANUFACTURED ONLY BY

THE SMITH & EGGE MANUFACTURING CO.

BRIDGEPORT, CONN.

It is in use at the Patent Office, Washington, and many other prominent buildings all over the country.

It gives satisfaction wherever it is used. Its Tensile Strength and Wearing Quality is simply Wonderful.

The "Giant" Metal is made expressly for us only, and no other metal offered in the market is equal to it for this purpose.

The company also manufacture excellent chains at lower prices than the "Giant" Metal, in "Red Metal" (copper and tin mixture) and Steel.

Steel Axle, square grooved Pullies in Iron and Real Bronze, Single and double grooved with balancing fixtures for the latter to carry two strands of chain side by side for heavy weights—all being nice goods.

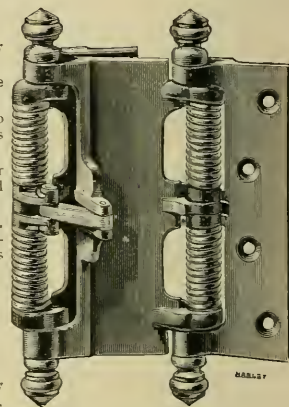

Also "Jewett" Double and Single Acting Butts.

S. S. S. S.

SIMPLE, SENSIBLE STRONG AND SECURE.

In use in the Produce Exchange and Stewart Buildings, New York, and many other elegant structures throughout the country.

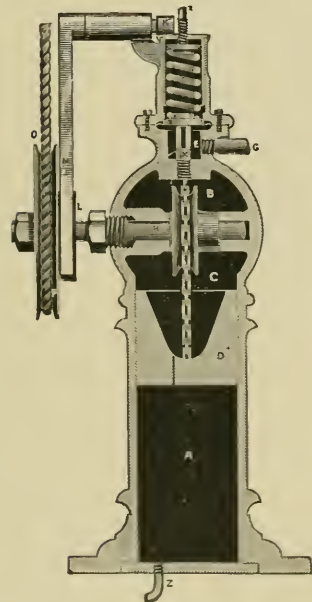

Send for Descriptive Circular.

Steam Damper Regulators.

This Cut shows the Section of our

Steam Damper Regulators

There are only Two Sizes, weighing 15 and 30 pounds,

YET IT WILL DO THE WORK OF LARGER and MORE COSTLY MACHINES.

EACH MACHINE IS NICKEL PLATED. PRICES \$60 AND \$100

An Iron Bracket and 25 feet of Chain with each one.

We also manufacture Reducing Valves, Pressure Regulators, Pump Governors, Balanced and Lever Valves, and other Steam Regulating Devices. Send for Price Lists to

MAIL CHUTE IN AN — OFFICE BUILDING, — HOTEL, OR APARTMENT HOUSE —

Is now "as much a necessity as an elevator."

OVER 300 IN USE.

Architects should write for detail drawings and other important information.

A vertical fall being essential, the mail chute should be planned for, and if the preparatory work is included in the building contract, quite a saving can be made.

The Mail Chute by arrangement with the postal authorities, is furnished with a "U. S. Mail Box," in connection with the FREE U. S. collection service.

THE CUTLER MANF'G COMPANY, ROCHESTER, N. Y.

Sole makers under original and numerous patents. Authorized by P. O. Dept.

R. W. GIBSON, Architect.

ECCLESIASTICAL · ART · WORKERS

As Specialists in Ecclesiastical and Memorial Art Work, the Messrs. Lamb can answer definitely from both an artistic and churchly standpoint, all questions regarding the Stained Glass, Color Decoration and Furnishing of the Church Interior.

* * *

Established over thirty years (during which time they have designed and executed some of the most important work ever produced in this country,) they can arrange comprehensive schemes, embodying the architect's suggestions, so that unity of effect will be secured in color, line and proportion.

* * *

Illustrated hand-books (forwarded when requested), give many ideas in regard to the correct Decoration and Furnishing of the Church, and many suggestions to those about to place Memorials.

* * *

Stained and Mosaic Glass, Color Decoration and Mural Painting, Carved Wood Work, Bronze, Brass and Wrought Iron Work, Memorial Tablets, Marble Work, Mosaics, Sterling Silver, Ecclesiastical Embroideries, Banners, etc., etc.

* * *

WRITE FOR
Illustrated Catalogue and Prices

HAVEMEYERS & ELDER, Sugar Refiners.

BROOKLYN, E. D., Dec. 15, 1882.
DEAR SIR:—We have been troubled for some years by a muddy deposit in boilers that was comparatively easy to wash from body of boiler, but was gradually baked fast to a hard scale on the outside of the tubes, so that it was necessary to scrape them as well as we could once a year. After scraping the boilers your Cleaners were put on and have given excellent satisfaction, and the sixty boilers having Cleaners on, after a run of from six to eight months, are as clean as new boilers.
Yours truly,
H. V. ELDER, JR.

Havemeysers & Elder, Box, 180, have 110 Cleaners in use

The Hotchkiss MECHANICAL Boiler Cleaner.

AN AUTOMATIC DEVICE FOR KEEPING BOILERS CLEAN.

Removes OIL, LIME, MAGNESIA, or any other Sediment. Prevents FOAMING, SCALING, BURNING, REPAIRS.

"HOW TO KEEP BOILERS CLEAN."

Is the title of a 36 page illustrated book, containing varied and valuable information for steam users and engineers; how to construct, run and keep a boiler clean, with a list of users and testimonials from the leading steam users of the United States and foreign countries, which will be mailed FREE to any address by

JAS. M. HOTCHKISS, 120 Liberty St., New York.

—PRICE, \$75.00.—

Beware of Infringements.

MODE OF OPERATION.

By a continuous, rapid circulation of the boiler water (from the surface) through the funnel C by pipe D, the sediment is carried to the Reservoir B, where the current is expanded and given the downward course so that all the mud or sediment is precipitated in the reservoir, the purified water returning constantly to the boiler by pipe E. The mud or sediment being discharged at will by pipe F.

This mechanical device is simple, effective and inexpensive. Avoids the use of compounds and the necessity of cleaning days. Will outlast the boiler and requires no repairs.

TRADE MARK.
OR—

TRI-SODIUM PHOSPHATE

In connection with this Cleaner, furnishes the only known means of preventing scale in boilers using water highly charged with Sulphate of Lime.

CROTON FLOUR MILLS, 36 Cherry Street.

NEW YORK, February 16, 1887.
DEAR SIR:—We attached five of your special size Boiler Cleaners on five of our tubular boilers, after retubing them. The sixth boiler, at your suggestion, we did not scale or remove the tubes, but applied your Cleaner to it as it then was. At this date, after some fifteen months continuous day and night work, we find all of our six boilers in equally good condition, and free from any accumulation of mud or scale.
Respectfully,
GEORGE V. HECKER & CO.

WEST ROCK PAPER MILL.

NEW HAVEN, Conn., Jan. 19, 1887.
DEAR SIR:—We have used tubular boilers in our paper mill since 1840—for several years we had a muddy deposit on the tubes and shells, and because so hard we could not scrape it off—used various patented compounds for several years, which did not answer any good purpose, took out the tubes, replaced them; still the deposit continued. We put in new boilers in 1877, and applied your mud draus, since which time our boilers have been clean and free from all deposits; are using less coal, and would not part with them for any consideration; consider them a very valuable improvement.
Yours very truly,
JOSEPH FAIKER & SON.

ARCHITECTS SHOULD ALWAYS SPECIFY THE PATENT LEAD SASH WEIGHTS,

MANUFACTURED BY
JERSEY CITY SMELTING WORKS, JERSEY CITY, N. J.

* FACTS *

1. They will run without any friction or noise.
2. Being made by Hydraulic Pressure, are solid all the way through, and are heavier and smoother than any other sash weight.
3. They hang plumb and true, and each one is centre-balanced.
4. Prices lower than ordinary weights.
5. They are twice as heavy as iron, consequently economize space.
6. It is impossible for eyes to come out, as is often the case with other weights.
7. We will furnish any desired shape or size on short notice.

—SEND FOR PRICES.—

HOW TO SECURE A GOOD TIN ROOF.

USE THE

Genuine Taylor "OLD STYLE" Brand Tin.

The Original Brand The Standard Tin that has been
so often imitated.

It has stood a practical test of over 40 years, and then been
found just as good as when first put on.

N. & G. TAYLOR CO. originated the idea
of stamping the brand and the thickness on
sheets of tin. They were also the first to offer
a bona fide guarantee to Architects, Property
Owners and Tin Roofers.

They Publicly Challenge Contra-
diction on these two points.

They further assert that through their ex-
ertions, a complete change has been wrought
among the trade. Bidders placed on an equal,
more honest work done and better tin used.

N. & G. TAYLOR CO. offer the following
ABSOLUTE PROTECTION in the use of their
Special Brand of Roofing Tin.

1st. By guaranteeing every sheet to be perfect, square and true to
standard gauge, all wasters rigidly excluded.

2d. Guaranteeing the sheets to be heavier coated than any of its imitations.

3d. Every sheet stamped with the name of N. & G. TAYLOR CO. It being
the only tin made that bears the name of the Guarantor upon the sheets.

4th. Protection by stamping the Registered Trade Mark of Target and
Arrow, also the thickness and the name "OLD STYLE" on each sheet.

5th. If the tin should not be found as represented, it will be removed from
the roof and replaced, the expense being borne by the Guarantor, N. & G.
TAYLOR CO.

Our book "How to secure A Good Tin Roof," sent free to any
address, also Samples of Tin, etc.

N. & G. TAYLOR CO.,

Established 1810. 81st Year.

California Homes No. 3.

PUBLISHED BY

SAMUEL NEWSOM, ARCHITECT,

ROOM 318, PHELAN BUILDING,

SAN FRANCISCO, CAL.

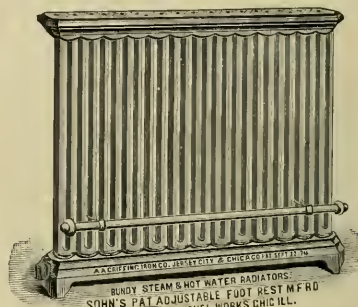

A work on Modern Homes containing 50 lithographic plates of Buildings, costing from \$700 to \$50,000, including interiors, sketches of mantels, side boards, hat racks, etc.

—PRICE, \$3.50.—

SUCCESS AT LAST!

A RADIATOR FOOT REST

Which is at once practical and ornamental.

BUNDY STEAM & HOT WATER RADIATORS.
SOHN'S PAT. ADJUSTABLE FOOT REST MFRD
& SOLD BY CHICAGO NICKEL WORKS CHIC. ILL.

THE

"Sohn" Patent Adjustable Foot Rest

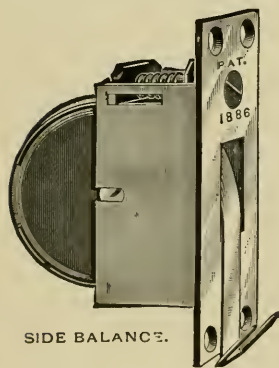

completely overcomes all objections heretofore raised against Radiator Foot Rests. It is quickly attached and can instantly be raised or lowered. It is substantially made. It is an ornament. No home using radiators for heating is complete without it. It is made for all styles and sizes radiators. For circular and price list, address

CHICAGO NICKEL WORKS,

Cor. ONTARIO and FRANKLIN STS., CHICAGO, ILL.

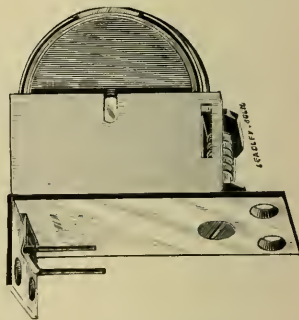

THE

Pullman Sash Balance

SIDE BALANCE.

Can be applied much more easily than the clumsy pulleys and weights, and without altering or defacing frame or sash. By its use boxes, pockets, &c., in frame are rendered entirely unnecessary, a great saving, particularly on old houses and brick buildings

TOP BALANCE.

It balances a sash more perfectly than weights. It is adjustable. It has no cords to get frayed and broken. Its bearings are of cast iron on steel, making it very much less noisy than if all of cast iron. Our Top Balance (see cut) is just the thing for Mullion Windows. These goods are constructed of the very best materials and are put together to last.

Ask your dealer for the "Pullman" or address,

These Wrenches are forged solid in one piece, from best refined iron, with tempered steel jaws. They have ratchet teeth, cut diagonally across one jaw, thus enabling them to bite with three teeth at once. A single Wrench will hold many sizes of nuts or bolts without adjusting.

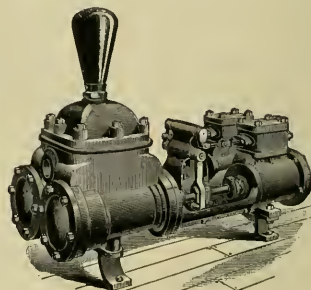

They are invaluable to engineers, gas fitters, blacksmiths, and jobbers of all kinds, and for general household or farmers' use.

Manufactured only by

MANUFACTURED BY

VAN WAGONER & WILLIAMS CO.

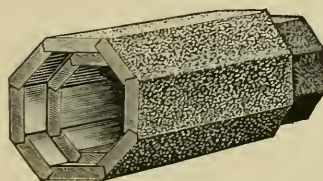

82 Beekman Street, NEW YORK.

Send for Catalogue.

A. WYCKOFF & SON, ELMIRA, N. Y.

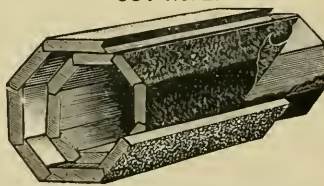

Patent Steam-Pipe Casing for Underground Steam-Pipes.

CUT No. 1.

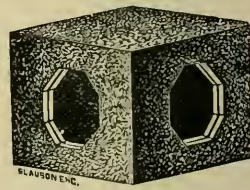

Cut No. 1 represents a section of our new Steam Pipe Casing complete.

CUT No. 2.

Cut No. 2 shows two staves removed to show the lining between the inside and outside staves.

CUT No. 3.

Cut No. 3 showing the manner of casing Tees and Elbows. The top is put on with screws and can be easily and quickly removed when necessary.

The Wyckoff Patent Steam-Pipe Casing is made of eight thoroughly seasoned white pine staves, free from sap, one-inch thick, joined together and wound with galvanized steel wire, then wrapped with two thicknesses of heavy corrugated paper, then another casing of one-inch staves is put on the outside and wound with galvanized steel wire, making a two-inch casing with a non-conducting lining between. The casing is then coated on the outside with asphaltum.

Wood and paper are excellent non-conductors of heat, and when used as above described, make a perfect casing for underground Steam-Pipe.

We have tested this casing in the same line, and in connection with the solid wood casing, both round and square, the solid casing would heat through while this casing would remain perfectly cool on the outside.

The heat from the steam pipes would check the solid wood casing, causing serious loss of heat. The Wyckoff Patent Steam-Pipe Casing being made of thoroughly seasoned pine lumber and wound with galvanized wire will not check.

It can be tapped for branches or cut at any point. It is more easily handled than the solid casing, as it weighs only one-third as much.

We would be pleased to quote prices for Casing delivered at any point.

WE MAKE THE FOLLOWING SIZES:

INTERNAL DIMENSIONS.

2 inch,	2 1/2 inch,	3 inch,	4 inch,
5 inch,	6 inch,	7 inch,	8 inch,
9 inch,	10 inch,	11 inch,	12 inch,
13 inch,	14 inch,	15 inch,	16 inch,
17 inch,	18 inch,	19 inch,	20 inch.

When asking quotations or ordering Casing, please state whether any Tees, Elbows, or Expansion-Joints will be used in the line.

SEND FOR CIRCULAR AND PRICES.

Users of Steam Take Notice!

← ARE YOU AWARE →

That a large percentage of heat in the ordinary Boiler passes unused up the chimney. This lost heat the

DAVIDSON BOILER

utilizes according to approved scientific principles. This Boiler is a Steam Generator and Feed Water Heater combined, and the heat that in other boilers would be wasted is used in the Feed Water Heater.

THE BERRYMAN Patent Feed Water Heater AND PURIFIER.

If you are using a steam boiler and have exhaust steam there is no safer or better paying investment than a Berryman Feed Water Heater and Purifier. It heats the feed water to the highest possible temperature with the exhaust without back pressure. It increases the steaming capacity of boilers; keeps boilers clean and free from scale; saves fuel, labor and boiler repairs. This is what we point hardest at: Our prices are no higher than other heaters of equal size and carrying capacity in gallons. To investigate will cost you nothing and may put money in your purse.

BENJ. F. KELLEY & SON,
91 Liberty Street, NEW YORK.

Do You Intend to Build ?

A NEW ATLAS, ENTITLED

Sensible Low-Cost Houses,

HOW TO BUILD THEM, NOW READY.

The illustrations of fifty-six New, Beautiful and Cheap Country Houses, costing from \$800 to \$7500, from which your selection can be made, would cost you over \$3000, or any one drawing from \$30 to \$40. It also contains plans and complete descriptions. Shows how you can build a \$2000 house for \$1750, and how to make them handsome, convenient, healthy, light, cool, and airy in summer; warm and cheaply heated in winter. Tells intending builders of homes what to do, and warns them what not to do. Describes houses adapted to all climates. If you intend to build now or twenty years from now, you want this book.

Price \$1.00, by mail.

AMERICAN ARCHITECT

—AND—

BUILDING NEWS.

PUBLISHED EVERY SATURDAY

Is the Best Advertising Medium that could be used by our fellow advertisers in this Catalogue as well as by every maker of and Dealer in Building Materials.

The subjoined letter draws attention to a fact which sometimes works to our disadvantage with advertisers, namely, that architects are not consumers, they are the advisors of, not the purchasing agents for, their clients.

Jersey City, N.J. Jan. 21-89.

Messrs. Ticknor & Co.,
211 Tremont Street,
Boston, Mass.

Gentlemen:-

We were formerly represented in your paper, The American Architect & Building News, but declined to continue our advertisement as we thought we did not hear from it often enough to make it pay, overlooking perhaps the fact that Architects are not themselves consumers and have comparatively little reason for putting themselves in direct communication with manufacturers; at any rate, we have concluded to again take space with you and enclose herewith matter for a 4" -ad- to run one year which please insert and oblige.

K

Very truly yours,

A. A. Griffing Iron Co.

EAGLE PRINTING HOUSE.

A. V. HAIGHT, FINE PRINTER,

12 Liberty St., Poughkeepsie, N. Y.

Largest and Best Equipped Printing Office on the Hudson River.

Illustrated Catalogues, Books, Pamphlets, and Fine Color Work executed
in the highest style of the art at reasonable prices.

WHAT IS SAID OF OUR WORK.

. AT HOME

From the American Newspaper Reporter, New York.

Mr. Haight's reputation as an artist is world-wide, and no eulogy of ours could do him the honor his work truly merits.

From the American Model Printer, New York.

Mr. Haight ranks at the top round of the ladder of American printerdom.

From the Inland Printer, Chicago.

In unique and artistic design, absolute perfection of execution, and harmonious blending of colors, no establishment in this country surpasses, and few equal its productions.

From the Typographic Advertiser, Philadelphia.

The handiwork of a true typographical artist, whom we take to be Mr. A. V. Haight. No printing office in the land turns out better work.

From the Printers' Cabinet, Chicago.

We can only reiterate what we have before said in these columns in regard to Mr. Haight, and it can be summed up by saying that he is one of the comparatively few natural artists among the craft in our country, and any job coming from his own hands may be set down as nearly perfect in style and execution as can be reached.

. ABROAD

From the Paper and Printing Trades Journal, London, England.

Mr. Haight keeps up his reputation as the most versatile of American artistic typographers, and like a true artist is constantly endeavoring to improve on all previous efforts; his thorough knowledge of the chromatic scale is shewn equally in neat combinations of quiet tints and in bold, handsome effects with two or three strongly contrasting colours; while his mastery of every detail of execution is simply wonderful; his strong individuality marks every specimen from his hand so distinctly as scarcely to need the evidence of the imprint to decide its paternity.

We scarcely know which to admire most—the cultivated taste shewn in the artistic and well balanced design, the bright and happy arrangement of the wonderfully clear tints, the exact finish of details, the "dead" register, or the beautiful presswork; as a specimen of ornamental chromo-typography is simply marvelous.—*Id.*

We have often said of Mr. Haight's work "this is his best yet: he won't be able to beat that"—but as often as not the next line specimen shews us that we were wrong.—*Id.*

Mr. Haight's skill as an original designer of artistic colour work is too well known to need comment; frequently we have said "this is the best—he won't beat it!" but the next specimen shews that his inventive faculty knows no rest.—*Id.*

From the London Press News.

We have heard Mr. Haight described as the "Boss" Printer of the United States. His work is certainly of the finest possible kind, and he himself must be an artist of no ordinary pretensions.

Mr. A. V. Haight, of Poughkeepsie, New York, has sent us a business circular announcing the enlargement of premises. The job itself is in striking contrast to the many handsome samples of intricate composition and brilliant press work that we have hitherto received from this versatile and artistic typographer. This specimen is a rare sample of chaste and delicate printing, and as such bears favourable comparison with anything we have received.—*Id.*

From the British and Colonial Printer and Stationer, London, England.

We have recently described and commended some exquisite specimens of this printer's typography. It is not excelled by anything produced in the States, which is certainly saying a good deal.

From the Printer's Register, London, England.

Mr. Haight takes advantage of all that is beautiful in the new productions of the type foundry, and eschews the monstrosities of some of his American confreres of note.

From Hailing's Circular, Cheltenham, England.

To us his work is simply marvelous.

This Catalogue was Printed and Bound at our Establishment.

THE BUILDING NEWS

PUBLISHED AT

97 OLIVER STREET, BOSTON, MASS, BY THE BUILDING NEWS COMPANY

A WEEKLY JOURNAL DEVOTED TO BUILDING INTERESTS.

PUBLISHED EVERY SATURDAY.

Containing the freshest and most authentic news that it is possible to obtain in regard to buildings contemplated and in process of erection, by means of special correspondents in all the principal cities and towns in New England, and through correspondence with all New England architects; real estate gossip; trade notes for the benefit of patrons; in short, all news in relation to building or in any way allied therewith.

SUBSCRIPTION, \$5.00 IN ADVANCE.

Advertising rates upon application.

As a means of introducing any specialty to the notice of New England architects and builders, THE BUILDING NEWS is positively without a rival, as it is the only paper in New England which covers this ground. Address all communications to

THE BUILDING NEWS CO.

A NEW BOOK ON HEATING AND VENTILATION.

WITH
EXHAUSTIVE TREATISE ON COMBUSTION

"HEAT."

ITS SCIENCE, PRODUCTION AND APPLI-
CATION TO THE WARMING AND
VENTILATION OF BUILDINGS.

By JOHN H. MILLS, 10 Westland Avenue, Boston, Mass.

INDEX OF CHAPTERS AND SUBJECTS.

VOLUME I.

PART FIRST.—Combustion Practically and Scientifically Considered.

	PAGE.
CHAP. I. Heat: Its Nature and Source	11
CHAP. II. Mineral Coal and its Production	19
CHAP. III. Combustion a Chemical Process	29
CHAP. IV. Elements employed in Combustion	37
CHAP. V. Separation of the Fuel previous to Combustion	49
CHAP. VI. Volatile Constituents of Coal	53
CHAP. VII. Character of the Coke, Volume of Air Required	61
CHAP. VIII. Construction of Furnaces for the Proper Combustion of Fuel	93

Illustrated by 9 Colored Diagrams and 4 full-page Tables.

SECOND.—Solid, Liquid, and Gaseous Fuels, and their Furnaces.

CHAP. IX. Pulverized Coal and other Fine Fuels, Mechanical Stokers, etc.	107
CHAP. X. Petroleum: Its Production and Transportation	121
CHAP. XI. Petroleum Oil as Fuel vs. Coal	143
CHAP. XII. Natural Gas: Transportation and Use	167
CHAP. XIII. Manufactured and Carburetted Gas	195

Illustrated by 4 Diagrams and 4 full-page Tables.

THIRD.—Boilers of Wrought and Cast Metal.

CHAP. XIV. Unsafe Boilers and Steam Generators	213
CHAP. XV. Safety Sectional and Power Boilers	241
CHAP. XVI. The Mills and other Heaters—Low Pressure Boilers	269-302

Illustrated by 11 Plates, several Tables, and Reports of Engineers.

VOLUME II.

FOURTH.—Radiators, Direct and Indirect, for Steam and Water Heating.

	PAGE.
CHAP. XVII. The Laws and Phenomena of Heat Applied to Radiators	303
CHAP. XVIII. Various Materials and Forms as Radiators	315
CHAP. XIX. Cast Iron Radiator Construction	327
CHAP. XX. "Indirect" Radiators—Steam and Hot Water Heat Compared	353

Illustrated by 21 Plates, 4 Colored Diagrams, and 8 Tables.

FIFTH.—The Warming of Buildings by Steam and by Water Apparatus.

CHAP. XXI. Hot Air and Steam Furnaces	373
CHAP. XXII. Steam and Water as Heating Mediums	391
CHAP. XXIII. Water Heating Apparatus, Ancient and Modern	409
CHAP. XXIV. Examples of late Water Construction and Operation	433
CHAP. XXV. General Proportions of Water Apparatus	461

Illustrated by 8 Diagrams, 11 Tables, 8 Plates and Figures.

SIXTH.—The Ventilation of Buildings—The Amount of Air Required.

CHAP. XXVI. Air Hygienically and Scientifically Considered	487
CHAP. XXVII. Condition of Public Schoolhouses	507
CHAP. XXVIII. Methods of securing Ventilation, Flues and Chimneys considered	525
CHAP. XXIX. Mechanical or Power Ventilation—Modern Examples	547
CHAP. XXX. Examples of Mechanical Ventilation	571-594

Illustrated by 8 Plates and Figures, 4 Colored Diagrams, and 16 Tables.

NOTE.—On account of the large size and weight of the books, and the fact that the tables and diagrams relating to the same subject are necessarily separated, some in one volume and some in the other, it is the author's intention to gather all the Tables, Diagrams and other key pages, and bind them in a small indexed volume, which may be rolled and carried in the pocket, thus placing the practical results of experiments and tables in a connect and compact form. **PRICE (when ready) \$3.**

From Volume I.: 15 Tables, 4 Diagrams, 6 Plates, and 20 explanatory and miscellaneous pages—45 Pages.

From Volume II.: 35 Tables, 20 Diagrams, 5 Plates, and 25 explanatory pages, being 85 Pages, or a total of 130 Pages.

For Sale by A. A. GRIFFING IRON CO., Jersey City, N. J., and JOHN H. MILLS, No. 10 Westland Ave., Boston.

Price for Volumes I and 2, \$10.00.

THE LEADING

and representative journal of the Carpentry Building and Decorating Trades, in this country and Canada. Contains the latest news and is full of practical information. Leading experts on our staff for every branch. Technical articles on interesting subjects in every number accompanied by accurate scale, models and designs.

AS AN ADVERTISING MEDIUM

It requires no argument to prove that a publication which is universally recognized as the representative journal of the Carpentry and Building trades, an eagerly looked for and welcome monthly visitor, whose pages are scanned alike by both employer and workman, and whose influence and circulation are daily increasing, must be an invaluable channel of communication between the producer and purchaser. The fact that its advertising patrons are the leading manufacturers of Builders' Materials, Saws, Carpenters' Tools, Decorative Supplies, etc., a fact of which the publisher is justly proud, furnishes the best evidence of its value, influence and circulation. All that is standard, novel, or deserving in connection with the Carpentry and Building business can be brought, through the use of its columns, to the attention of the trade at rates and with results which no wide-awake, enterprising firm, desirous of extending its business, can afford to overlook.

INFORMATION ABOUT THE SOUTH.

The marvelous mineral and timber wealth of the Southern States, their unrivaled capabilities as a manufacturing area, and the astonishing progress they are making in developing their natural resources and in utilizing their facilities for manufacture, are attracting the attention of the whole world. The extent of these resources and advantages is so fully and carefully set forth, and the progress of this development so faithfully chronicled from week to week in the *Manufacturers' Record*—the great industrial paper of the South, and the most widely quoted industrial paper in the world—that it is now accepted everywhere as unquestioned authority on Southern affairs, and its statistics and statements are drawn upon by almost every writer or speaker on any Southern topic.

It is the accepted authority upon Southern progress—the medium through which the great advantages and resources of the South are made known to the business men of the North and West—and its circulation not only covers the entire South from Maryland to Texas, but also the North and West. It is widely read by bankers, capitalists, and others in the North, seeking profitable investments in the South, by manufacturers of all classes who desire to increase their Southern trade, and by all others, North and South, who are interested in the general progress of this section.

Its weekly issues constitute an authentic history of the material development of the Southern States and furnish every week a vast variety of information on Southern affairs that can be gained from no other source. It discusses in its editorial columns and in its correspondence every topic of Southern interest. It publishes every week particulars of every manufacturing, mining and railroad enterprise organized or projected in the entire South, from Maryland to Texas. Subscribe for it. Price \$4.00 a year.

• • • • SOUTHERN TRADE • • • •

The *Manufacturers' Record* has widespread influence. It is read and quoted and commended in every part of the United States. It numbers among its subscribers the most prominent houses and the officers of the largest corporations in the Southern States; the proprietors of mills and factories in every line of manufacture, leading contractors, hardware dealers, the presidents and managers of railroads, mining companies, pig iron furnaces, cotton and woolen mills, banks, owners of saw mills, furniture factories, spoke and handle factories, flour mills, cottonseed oil mills, stove foundries, etc., etc. It is a pushing, live, enterprising, vigorous paper. Its matter is fresh, interesting and original. It differs from all other industrial papers in that it has a specialty—a mission—viz: The advancement of the South. As an advertising medium it is unequalled. Try it.

For Builders, Carpenters, Architects and Draftsmen.

ONE DOLLAR A YEAR—96 Plates each Year, 8x12 inches.

The Builder and Woodworker

Is now in its Twenty-fifth Volume, and is the oldest Business and Architectural Journal in America.

Handsomely illustrated throughout the text, and each number contains eight full-page Plates of new designs for Buildings, Interiors and Details. Edited by Fred. T. Hodgson, author of "The Steel Square and its Uses," "The Builder's Guide," "Practical Carpentry," etc., etc. Published monthly by

HODGSON & BARWOOD,

294 BROADWAY,

NEW YORK.

Send stamp for sample copy and book circular.
N. B.—All kinds of Mechanical and Architectural Books for sale.

If you wish to reach

Farmers of Georgia,
AND SURROUNDING STATES,

Put your advertisement in

The Plowboy and Country Farmer

A Monthly Magazine edited by

Farmers who Dig in the Earth,

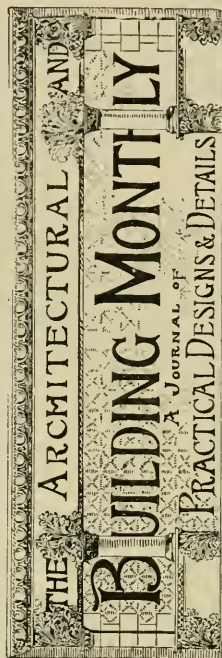

AND NOT OFFICE FARMERS.

Published by

The Plowboy Company,
ATLANTA, GA.

50 CENTS A YEAR.

ADVERTISING RATES REASONABLE.

A NEW PUBLICATION

Of special interest to Architects, Contractors, Carpenters and Builders, Sash and Blind Manufacturers, Mason Builders, Plasterers, and all others connected with the Architectural and Building Trade.
Each number will contain from eight to twelve large plates of Original Drawings to scale. During the year there will be shown a large variety of Designs and Details suited to Cities, Towns and Villages, including Public and Private Buildings, medium and low cost Cottages, Suburban or Country Houses, Stables and Out-Buildings, Barns and Sheds, and all the latest and most valuable designs for Furniture, Stoves, and other articles of domestic use.
Manufacturers and dealers in Builders' Supplies will find it to their interest to advertise in this Journal, as on account of its thoroughly practical character and value, the numbers will be saved for use and reference for many months. Advertising rates furnished on application.

SUBSCRIPTION, \$5.00 PER YEAR.

CIRCULATION 5,000 to 10,000 MONTHLY.

A. J. BICKNELL, Publisher,
115 Broadway,
NEW YORK.

ONE NUMBER OF

Domestic Engineering

CONTAINS

INFORMATION WORTH MORE THAN THE
PRICE OF A YEAR'S SUBSCRIPTION TO
EVERY ONE WHO IS INTERESTED
IN PLUMBING, HEATING, LIGHT-
ING AND VENTILATING.

NOW IS THE TIME TO SUBSCRIBE.

ONLY \$1.00 A YEAR.

Address,

Domestic Engineering,

OFFICE AND FACTORY:

621 ALBANY ST., BOSTON, MASS.

ELEVEN REASONS WHY THE HARTMAN PATENT SLIDING BLINDS Are Preferred to All Others.

1. There is no other blind with a burglar-proof lock attached to each set, free of charge.
2. There is no other that is furnished with a fine and complete set of patented hardware.
3. There is no other with pockets and cover.
4. There is no other with patented supporting strips.
5. There is no other with guideway set back on sub-jamb from the front or outer surface of the jams of the window so that the sashes can be renewed without removing the guideways.
6. There is no other with tenanted overlapping stationary slats forming a perfect imitation of rolling slats.
7. There is no other with combination of panels and stationary slats.
8. There is no other with combination of stationary slats and rolling slats.
9. There is no other with "Novelty" sections. (Patented.)
10. There is no other so durable and so well made for the money.
11. There is no other blind so popular, and that gives such universal satisfaction.

The item of "Burglar-proof Lock" alone may be worth to the purchaser in these times of house robbing, many times the cost of the Blinds, and perhaps save life also. STATE PATENT RIGHTS FOR SALE. AGENTS WANTED EVERYWHERE. Send for Illustrated Catalogue and Prices to

JEWETT'S

Automatic Damper Regulator

FOR HOT WATER HEATER.

This device has proven itself perfect and positive in its operation.

It is easily controlled; quickly changed for a higher or lower temperature.

It will maintain a uniform temperature for any length of time.

It is simple in construction; never gets out of order; can be attached to any hot water boiler.

Many manufacturers have adopted it and ship one with every boiler.

In all cases it has proven itself a profitable investment.

It has been thoroughly tested and is no experiment.

Full particulars furnished on application.

JEWETT'S
 AUTOMATIC DAMPER REGULATOR
 FOR HOT WATER HEATER.

MACHINE.

RESIDENCE OF DR. GEO. L. MILLER, "SEYMOUR PARK," OMAHA, NEB.

OMAHA, NEB.,
Jan 17, 1890.

GENTLEMEN:

My heating and lighting continue to be the joy of my new house, and I cannot tell you how I appreciate the unquestionable economy and perfection of both.

Most truly yours,

GEO. L. MILLER.

BOLTON HOT WATER HEATER.

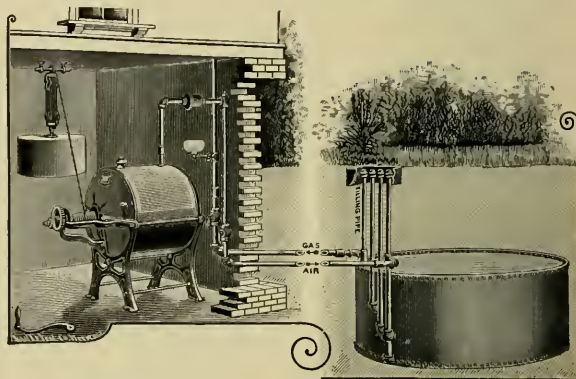

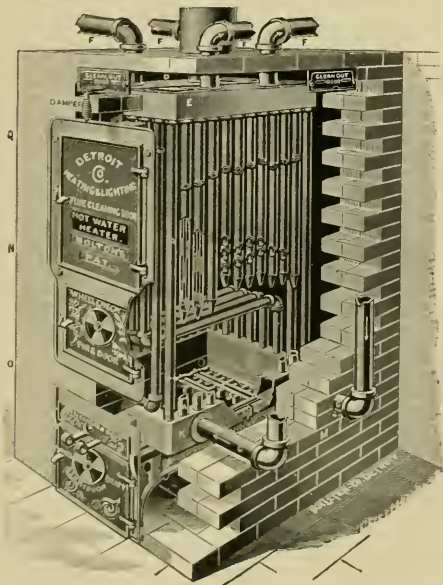

JEREMIAH DWYER, President Michigan Store Co., writes:

DETROIT, MICH., April 22, 1890.

GENTLEMEN:—It was only after considerable thought by my associates and self that we concluded hot water was the best artificial heat. Your BOLTON Hot Water Heater I consider A. 1, and your system of circulation and workmanship is well done and every way satisfactory to myself and family, and I take great pleasure in making this statement. Yours respectfully.

[TRANSLATION.]

To
The A.A. Griffing Iron Co.
Jersey City, N.J. U.S.A.
Dear Sirs;

The Tokyo Ei Wa
Jakko (Tokyo Anglo-Japanese College) had
recently placed the Bundy radiator
in one of its buildings (Goucher Hall)
and it is with pleasure that we
speak of its great merit as a heater.
We believe it to be just the thing
for heating large buildings in North
ern Japan. The simplicity of its structure
we should recommend it to builders
in this country.

Yours Very Truly,
J. D. Spencer
President

STEAM HEATING APPARATUS,
116, 118, 120 and 122 Wooster Street,
NEW YORK.

May 6th 1886.

A. A. Griffing Iron Co.
Gentlemen,

We have used several hundred thousand Bundy tubes from the time of their first introduction on the market, and have always found that they gave entire satisfaction to our customers.

Besides the numerous Churches, Apartments, Private Houses etc. which we have supplied with Bundy Radiators, we have furnished them for many of the large Office Buildings in this city, of which the new Potter Building, Park Row, Beekman and Nassau Sts is the latest example.

Very truly Yours

Gillis & Geoghegan.

POTTER BUILDING, 38 PARK ROW.

O. B. POTTER,
Potter Building, 38 Park Row.

New York, Jan. 5, 1887

A. A. Griffing Iron Co.,
Jersey City, N. J.

Gentlemen:-

You are entitled to an expression of my opinion in reference to the merits of your radiators. I have been using radiators for many years in various buildings owned by me. More recently, I have used those manufactured by your Company; and have used them exclusively in the "Potter Building," 38 Park row.

Thus far, they have proved themselves equal to your recommendation of them, and I am confident they will continue to do so.

They were set with the greatest care by Messrs. Gillis & Geoghegan; and the efficient and equal distribution of heat throughout the building I have never seen equalled. They are entirely noiseless, easily managed, and accomplish everything to be desired in a steam radiator.

Very respectfully yours,

O. B. Potter

Gentlemen

We have used the Bundy Radiator in its various forms almost exclusively in our business for the last twelve years. In that time we have placed at least half a million square feet of heating surface. We are satisfied that there is no better radiator made than this, and we recommend it to all who have use for heating surface either for Steam or Hot water.

Yours Respectfully
Johnson & Morris

GEO. C. FOUNTAIN,

➤ PHARMACIST ◀

219 Pacific Avenue, Jersey City.

Jersey City Oct 10/88

A. A. Griffing Iron Co

Gentlemen

My Store and Residence are both heated by your Bundy Radiators which I consider a great Success

Regarding Steam as a medium for heating buildings I must say that I attribute very much of the good health of myself and family to the system certain it is that the life of my Daughter was saved by the good effects brought about by opening the small pet cock on one of your Radiators and allowing the Steam to escape into the room at an ^{Even} temperature of 80° to 82° for Eighteen days My Daughter was suffering from a severe attack of Malignant Diphtheria and Diphtheretic Croup and by this means my Physicians increased the humidity of the air in the room and checked the disease

Respectfully, Yours
George C. Fountain

EDWARD C. WALLER.
Home Insurance Building
N. E. CORNER ADAMS AND LA SALLE STS.
REAL ESTATE AND LOANS.

CHICAGO May 11th., 1889

(Dictated)

T. C. Perry, Esq.,
99 Madison St.,

Dear Sir:- When deciding upon the radiators for the Home Insurance and "The Rookery" Buildings, the subject, of course, was gone into very thoroughly and exhaustively on the part of the building committees of the respective buildings. It was finally decided to use the Bundy Standard Radiators made by The A.A. Griffing Iron Co., of Jersey City. I think we have about thirteen hundred (1300) in use, and I am thoroughly satisfied that they are certainly as good as any on the market, if not the very best. They have given us excellent service and we are entirely satisfied with them.

Should I have to decide, to-day, on another radiator job, I should undoubtedly give the Bundy radiator the preference.

Very truly yours,

Edward C. Waller

This letter was written after using over 2,000 Bundy Radiators. What better proof can there be of their value.

410 WALNUT STREET.

April 26th 87
PHILADELPHIA,

A. A. Griffing Iron Co.

Sir,

We have used
and the "Bundy Patent Direct & Indirect
Radiators" in most of our larger build-
ings, Court House, Church & City Building
and have found them thoroughly sat-
isfactory in every respect.

Yours truly, Hazlehurst & Huckel

The Bundy Radiator successfully heats Philadelphia's largest buildings, the Court House, Mutual Life, Wannamaker's Store, Hotel Lafayette, Girard Estate Buildings and hundreds of others.

TELEPHONE No. 25

ESTABLISHED 1853.

CABLE ADDRESS. "DUNNING, GENEVA"

Wm. B. Dunning's
New York Central Iron Works.

Steam Engines, Boilers
of all kinds
and Machinery Generally

Dunning's Patent
Steam Heating Boilers a Specialty
Over 14,000 in use
Geneva, N. Y. May 27, 1889.

A. A. Griffing Iron Co.,

Jersey City, N. J.

Gentlemen:--

Replying to yours of the 22nd inst. would say that, the Bundy Radiator has been specified in connection with The Dunning Steam and Hot Water Boilers for the past twelve years in heating contracts all over the United States and from Italy to Japan, and I have the pleasure of knowing that they have worked well in every instance. I believe there is no radiator that is superior to the Bundy and none that is more handy for repairs, especially should any accident happen to them whereby they are broken. It is but a short job to unscrew the tube and replace it with another, which you cannot do very easily with any other in the market. They are a good circulator and have given the best of satisfaction wherever used.

Wishing you success with them, I remain,

Very truly yours,

Wm. B. Dunning
